UNITED STATES GOVERNMENT FLIGHT INFORMATION PUBLICATION

# CHART SUPPLEMENT PACIFIC

Effective 0901Z  
to 0901Z

**10 SEP 2020**  
**5 NOV 2020**

**Note: A content review is taking place on the Chart Supplement between the A/FD section and the Terminal Procedures section. Users may see substantial updates or changes.**

Consult NOTAMs for latest information

Consult/Subscribe to FAA Safety Alerts and Charting Notices at:

[http://www.faa.gov/air\\_traffic/flight\\_info/aeronav/safety\\_alerts/](http://www.faa.gov/air_traffic/flight_info/aeronav/safety_alerts/)

Warning: Refer to current foreign charts and flight information publications for information within foreign airspace

Published from digital files compiled in accordance with Interagency Air Committee specifications and agreements approved by: Department of Defense • Federal Aviation Administration

## GENERAL INFORMATION

This Chart Supplement is a Civil Flight Information Publication updated every eight weeks by the U.S. Department of Transportation, Federal Aviation Administration, Aeronautical Information Services, <http://www.faa.gov/go/ais>.

It is designed for use with Flight Information Publication Enroute Charts, and the Sectional Aeronautical Chart covering the State of Hawaii and that area of the Pacific served by U.S. facilities.

This Chart Supplement contains an Airport/Facility Directory, ATC procedures and terminal SID, STAR and IAP charts applicable to the Pacific area.

The official ATC procedures for operating in the Pacific, outside sovereign US airspace are prescribed by ICAO and are contained in ICAO documents 4444, 7030 and Annexes 2 and 11.

### CORRECTIONS, COMMENTS, AND/OR PROCUREMENT

**CRITICAL** information such as equipment malfunction, abnormal field conditions, hazards to flight, etc., should be reported as soon as possible. **NOTE:** Requests for the creation or revision to Airport Diagrams should be in accordance with FAA Order 7910.4.

FOR COMMENTS OR CORRECTIONS: [https://www.faa.gov/air\\_traffic/flight\\_info/aeronav/aero\\_data/](https://www.faa.gov/air_traffic/flight_info/aeronav/aero_data/)

FAA, Aeronautical Information Services  
1305 East West Highway  
SSMC-4 Suite 4400  
Silver Spring, MD 20910-3281  
Telephone 1-800-638-8972

**NOTICE:** Changes must be received by Aeronautical Information Services as soon as possible but not later than the "cut-off" dates listed below to assure publication on the desired effective date. Information cut-off dates that fall on a federal holiday must be received the previous work day.

Effective Date	Airport Information Cut-off date	Airspace Information* Cut-off date
10 Sep 20	29 Jul 20	14 Jul 20
5 Nov 20	23 Sep 20	8 Sep 20
31 Dec 20	18 Nov 20	3 Nov 20
25 Feb 21	13 Jan 21	29 Dec 20
22 Apr 21	10 Mar 21	23 Feb 21
17 Jun 21	5 May 21	20 Apr 21

\*Airspace Information includes changes to preferred routes, SID's, STAR's, IAP's and graphic depictions on charts.

FOR PROCUREMENT:

For digital products, visit our website at:  
[http://www.faa.gov/air\\_traffic/flight\\_info/aeronav/digital\\_products/](http://www.faa.gov/air_traffic/flight_info/aeronav/digital_products/)

For a list of approved FAA Print Providers, visit our website at:  
[http://www.faa.gov/air\\_traffic/flight\\_info/aeronav/print\\_providers/](http://www.faa.gov/air_traffic/flight_info/aeronav/print_providers/)

The following publications for use in the Pacific area are available from the FAA, Aeronautical Information Services:

**CHART SUPPLEMENT PACIFIC.** This supplement is issued every 56 days.

**HAWAIIAN ISLAND-MARIANA ISLANDS SECTIONAL CHART.** Issued semi-annually. Consult the Visual Chart Bulletin in this Supplement for date of the current edition.

**NORTH PACIFIC OCEAN ROUTE CHARTS.** Charts are issued every 56 days at 1:12,000,000 composite or four 1:7,000,000 area charts.

**IFR ENROUTE PACIFIC OCEAN AND HAWAIIAN ISLAND CHART.** Available from the National Geospatial-Intelligence Agency, provides coverage of Pacific areas served by US facilities.

NGA Combat Support Center, ATTN: DDCP  
Washington, D.C. 20315-0020  
Telephone (301) 227-2495 or Toll Free 1-800-826-0342

### AMENDMENT NOTICE

A change notice will only be issued for safety considerations such as when an amended or original instrument approach procedure is issued.

UPON RECEIPT, THE AMENDMENT NOTICE SHOULD BE ATTACHED TO THIS PAGE SO THAT USERS HAVE ALL SIGNIFICANT CHANGES AVAILABLE.

This Airport/Facility Directory comprises part of the following sections of the United States Aeronautical Information Publication (AIP): GEN, AGA 3, COM 2.

## GENERAL INFORMATION

## ABBREVIATIONS

The following abbreviations/acronyms are those commonly used within this Directory. Other abbreviations/acronyms may be found in the Legend and are not duplicated below. The abbreviations presented are intended to represent grammatical variations of the basic form. (Example—"req" may mean "request", "requesting", "requested", or "requests").

For additional FAA approved abbreviations/acronyms please see FAA Order JO 7340.2 —Contractions

<b>Abbreviation</b> .....	<b>Description</b>	<b>Abbreviation</b> .....	<b>Description</b>
A/G .....	air/ground	AM .....	Amplitude Modulation, midnight til noon
AAF .....	Army Air Field	AMC .....	Air Mobility Command
AAS .....	Airport Advisory Service	amdt .....	amendment
AB .....	Airbase	AMSL .....	Above Mean Sea Level
abm .....	abeam	ANGS .....	Air National Guard Station
ABn .....	Aerodrome Beacon	ant .....	antenna

Abbreviation.....	Description
CPDLC .....	Controller Pilot Data Link Communication
crdr.....	corridor
crox .....	cross
CRP .....	Compulsory Reporting Point
crs .....	course
CS .....	call sign
CSTMS.....	Customs
CTA.....	Control Area
CTAF.....	Common Traffic Advisory Frequency
ctc.....	contact
ctl .....	control
CTLZ.....	Control Zone
CVFR .....	Controlled Visual Flight Rules Areas
CW .....	Clockwise, Continuous Wave, Carrier Wave
dalgt .....	daylight
D-ATIS.....	Digital Automatic Terminal Information Service
daylt .....	daylight
db.....	decibel
DCL .....	Departure Clearance
Dec.....	December
decom.....	decommission
deg .....	degree
del.....	delivery
dep.....	depart
DEP .....	Departure Control
destn.....	destination
det.....	detachment
DF .....	Direction Finder
DH.....	Decision Height
DIAP .....	DoD Instrument Approach Procedure
direc .....	directional
disem.....	disseminate
displ .....	displace
dist .....	district, distance
div .....	division
DL .....	Direct Line to FSS
dlt.....	delete
dly.....	daily
DME .....	Distance Measuring Equipment (UHF standard, TACAN compatible)
DNVT.....	Digital Non-Secure Voice Telephone
DoD.....	Department of Defense
drct.....	direct
DSN.....	Defense Switching Network (Telephone)
DSN.....	Defense Switching Network
dsplcd.....	displaced
DT .....	Daylight Savings Time
dur.....	during
durn.....	duration
DV .....	Distinguished Visitor
E .....	East
ea .....	each
EAT.....	Expected Approach Time
ECN.....	Enroute Change Notice
eff.....	effective, effect
E-HA .....	Enroute High Altitude
E-LA.....	Enroute Low Altitude
elev.....	elevation
ELT.....	Emergency Locator Transmitter

**Abbreviation .....Description**

EMAS .....	Engineered Material Arresting System
emerg .....	emergency
eng .....	engine
EOR .....	End of Runway
eqpt .....	equipment
ERDA .....	Energy Research and Development Administration
E-S .....	Enroute Supplement
est .....	estimate
estab .....	establish
ETA .....	Estimated Time of Arrival
ETD .....	Estimated Time of Departure
ETE .....	Estimated Time Enroute
ETS .....	European Telephone System
EUR .....	European (ICAO Region)
ev .....	every
evac .....	evacuate
exc .....	except
exclد .....	exclude
exer .....	exercise
exm .....	exempt
exp .....	expect

FAA .....	Federal Aviation Administration
fac .....	facility
FAWS .....	Flight Advisory Weather Service
fax .....	facsimile
FBO .....	Fixed Base Operator
FCC .....	Flight Control Center
FCG .....	Foreign Clearance Guide
FCLP .....	field carrier landing practice
fcst .....	forecast
Feb .....	February
FIC .....	Flight Information Center
FIH .....	Flight Information Handbook
FIR .....	Flight Information Region
FIS .....	Flight Information Service
FL .....	flight level
fld .....	field
fig .....	flashing
FLIP .....	Flight Information Publication
flt .....	flight
flw .....	follow
FM .....	Fan Marker, Frequency Modulation
FOC .....	Flight Operations Center
FOD .....	Foreign Object Damage
fone .....	telephone
FPL .....	Flight Plan
fpm .....	feet per minute
fr .....	from
freq .....	frequency, frequent
Fri .....	Friday
fng .....	firing
FSS .....	Flight Service Station
ft .....	foot
ftد .....	fighter
GA .....	Glide Angle
gal .....	gallon

**Abbreviation ..... Description**

GAT .....	General Air Traffic (Europe-Asia)
GCA .....	Ground Control Approach
GCO .....	Ground Communication Outlet
glدr .....	glider
GND .....	Ground Control
gnd .....	ground
govt .....	government
GP .....	Glide Path
Gp .....	Group
GPI .....	Ground Point of Intercept
grad .....	gradient
grد .....	guard
GS .....	glide slope
GWT .....	gross weight
H .....	Enroute High Altitude Chart (followed by identification)
H+ .....	Hours or hours plus...minutes past the hour
H24 .....	continuous operation
HAA .....	Height Above Airport/Aerodrome
HAL .....	Height Above Landing Area
HAR .....	Height Above Runway
HAT .....	Height Above Touchdown
haz .....	hazard
hdg .....	heading
HDTA .....	High Density Traffic Airport/Aerodrome
HF .....	High Frequency (3000 to 30,000 KHz)
hgr .....	hangar
hgt .....	height
hi .....	high
HIRL .....	High Intensity Runway Lights
HO .....	Service available to meet operational requirements
hol .....	holiday
HOLF .....	Helicopter Outlying Field
hosp .....	hospital
HQ .....	Headquarters
hr .....	hour
HS .....	Service available during hours of scheduled operations
hsg .....	housing
hvy .....	heavy
HW .....	Heavy Weight
hwy .....	highway
HX .....	station having no specific working hours
Hz .....	Hertz (cycles per second)
I .....	Island
IAP .....	Instrument Approach Procedure
IAS .....	Indicated Air Speed
IAW .....	in accordance with
ICAO .....	International Civil Aviation Organization
ident .....	identification
IFF .....	Identification, Friend or Foe
IFR .....	Instrument Flight Rules
IFR-S .....	FLIP IFR Supplement
ILS .....	Instrument Landing System
IM .....	Inner Marker
IMC .....	Instrument Meteorological Conditions
IMG .....	Immigration
immed .....	immediate
inbd .....	inbound

Abbreviation.....	Description
Inc .....	Incorporated
incl.....	include
incr.....	increase
indef.....	indefinite
info.....	information
inop.....	inoperative
inst.....	instrument
instl.....	install
instr.....	instruction
int.....	intersection
intcntl.....	intercontinental
intcp.....	intercept
intl.....	international
intmt.....	intermittent
ints.....	intense, intensity
invo.....	in the vicinity of
irreg.....	Irregularly
Jan.....	January
JASU.....	Jet Aircraft Starting Unit
JATO.....	Jet Assisted Take-Off
JOAP.....	Joint Oil Analysis Program
JOSAC.....	Joint Operational Support Airlift Center
JRB.....	Joint Reserve Base
Jul.....	July
Jun.....	June
K or Kt.....	Knots
kHz.....	kilohertz
KLAS.....	Knots Indicated Airspeed
KLIZ.....	Korea Limited Identification Zone
km.....	Kilometer
kw.....	kilowatt
L.....	Compass locator (Component of ILS system) under 25 Watts, 15 NM, Enroute Low Altitude Chart (followed by identification)
L.....	Local Time
LAHSO.....	Land and Hold-Short Operations
L-AOE.....	Limited Airport of Entry
LAWRS.....	Limited Aviation Weather Reporting Station
lb, lbs.....	pound (weight)
LC.....	local call
lcl.....	local
LCP.....	French Peripheral Classification Line
lctd.....	located
lctn.....	location
lctr.....	locator
LCVASI.....	Low Cost Visual Approach Slope Indicator
lczr.....	localizer
LD.....	long distance
LDA.....	Landing Distance Available
ldg.....	landing
LDIN.....	Lead-in Lights
LDOCF.....	Long Distance Operations Control Facility
len.....	length
lgt, lgtd, lgts.....	light, lighted, lights
LIRL.....	Low Intensity Runway Lights
LLWAS.....	Low-Level Wind Shear Alert System

Abbreviation.....	Description
LLZ.....	Localizer (Instrument Approach Procedures Identification only)
LMM.....	Compass locator at Middle Marker ILS
lo.....	low
LoALT or LA.....	Low Altitude
LOC.....	Localizer
LOM.....	Compass locator at Outer Marker ILS
LR.....	Long Range, Lead Radial
LRA.....	Landing Rights Airport
LRRS.....	Long Range RADAR Station
LSB.....	lower side band
ltd.....	limited
M.....	meters, magnetic (after a bearing), Military Circuit (Telephone)
MACC.....	Military Area Control Center
mag.....	magnetic
maint.....	maintain, maintenance
maj.....	major
MALS.....	Medium Intensity Approach Lighting System
MALSF.....	MALS with Sequenced Flashers
MALSR.....	MALS with Runway Alignment Indicator Lights
Mar.....	March
MARA.....	Military Activity Restricted Area
MATO.....	Military Air Traffic Operations
MATZ.....	Military Aerodrome Traffic Zone
max.....	maximum
mb.....	millibars
MCAC.....	Military Common Area Control
MCAF.....	Marine Corps Air Facility
MCALF.....	Marine Corps Auxiliary Landing Field
MCAS.....	Marine Corps Air Station
MCB.....	Marine Corps Base
MCC.....	Military Climb Corridor
MCOLF.....	Marine Corps Outlying Field
MDA.....	Minimum Descent Altitude
MEA.....	Minimum Enroute Altitude
med.....	medium
MEHT.....	Minimum Eye Height over Threshold
mem.....	memorial
MET.....	Meteorological, Meteorology
METAR.....	Aviation Routine Weather Report (in international MET figure code)
METRO.....	Pilot-to-Metro voice cell
MF.....	Medium Frequency (300 to 3000 KHz), Mandatory Frequency (Canada)
MFA.....	Minimum Flight Altitude
mgmt.....	Management
mgr.....	manager
MHz.....	Megahertz
mi.....	mile
MID/ASIA.....	Middle East/Asia (ICAO Region)
MIJI.....	Meaconing, Intrusion, Jamming, and Interference
Mil, mil.....	military
min.....	minimum, minute
MIRL.....	Medium Intensity Runway Lights
misl.....	missile
mkr.....	marker (beacon)
MM.....	Middle Marker of ILS
mnt.....	monitor
MOA.....	Military Operations Area

<b>Abbreviation</b> .....	<b>Description</b>	<b>Abbreviation</b> .....	<b>Description</b>
MOCA .....	Minimum Obstruction Clearance Altitude	ntc .....	notice
mod .....	modify	NVD .....	Night Vision Devices
MOG .....	Maximum (aircraft) on the Ground	NVG .....	Night Vision Goggles
MON .....	Minimum Operational Network	NW .....	Northwest
Mon .....	Monday	NWC .....	Naval Weapons Center
MP .....	Maintenance Period	O/A .....	On or about
MR .....	Medium Range	O/S .....	out of service
MRA .....	Minimum Reception Altitude	O/R .....	On Request
mrk .....	mark, marker	OAT .....	Operational Air Traffic
MSAW .....	minimum safe altitude warning	obsn .....	observation
msg .....	message	obst .....	obstruction
MSL .....	Mean Sea Level	OCA .....	Oceanic Control Area
msn .....	Mission	ocnl .....	occasional
mt .....	mount, mountain	Oct .....	October
MTAF .....	Mandatory Traffic Advisory Frequency	ODALS .....	Omnidirectional Approach Lighting System
MTCA .....	Military Terminal Control Area	ODO .....	Operations Duty Officer
mtlly .....	monthly	offl .....	official
MUAC .....	Military Upper Area Control	OIC .....	Officer In Charge
muni .....	municipal	OLF .....	Outlying Field
MWARA .....	Major World Air Route Area	OLS .....	Optical Landing System
N .....	North	OM .....	Outer Marker, ILS
N/A .....	not applicable	opr .....	operate, operator, operational
NA .....	not authorized (For Instrument Approach Procedure take-off and alternate MINIMA only)	OPS, ops .....	operations
NAAS .....	Naval Auxiliary Air Station	orig .....	original
NADC .....	Naval Air Development Center	OROCA .....	Off Route Obstruction Clearance Altitude
NADEP .....	Naval Air Depot	ORTCA .....	Off Route Terrain Clearance Altitude
NAEC .....	Naval Air Engineering Center	OT .....	other times
NAES .....	Naval Air Engineering Station	OTS .....	out of service
NAF .....	Naval Air Facility	outbd .....	outbound
NALCO .....	Naval Air Logistics Control Office	ovft .....	overflight
NALF .....	Naval Auxiliary Landing Field	ovrn .....	overnight
NALO .....	Navy Air Logistics Office	OX .....	oxygen
NAS .....	Naval Air Station	P/L .....	plain language
NAT .....	North Atlantic (ICAO Region)	PAC .....	Pacific (ICAO Region)

nav .....	navigation	PALS .....	Precision Approach and Landing System (NAVY)
navaid .....	navigation aid	PAPI .....	Precision Approach Path Indicator
NAVMTO .....	Navy Material Transportation Office	PAR .....	Precision Approach Radar
NAWC .....	Naval Air Warfare Center	para .....	paragraph
NAWS .....	Naval Air Weapons Station	parl .....	parallel
NCRP .....	Non-Compulsory Reporting Point	pat .....	pattern
NDB .....	Non-Directional Radio Beacon	PAX .....	Passenger
NE .....	Northeast	PCL .....	pilot controlled lighting
nec .....	necessary	pent .....	penetrate
NEW .....	Net Explosives Weight	perm .....	permanent
ngt .....	right	perms .....	permission
NM .....	nautical miles	pers .....	personnel
nml .....	normal	PFC .....	Porous Friction Courses
NMR .....	nautical mile radius	PJE .....	Parachuting Activities/Exercises
No or Nr .....	number	p-line .....	power line
NOLF .....	Naval Outlying Field	PM .....	Post meridian, noon til midnight
NORDO .....	Lost communications or no radio installed/available in aircraft	PMRF .....	Pacific Missile Range Facility
NOTAM .....	Notice to Airmen	PMSV .....	Pilot-to-Metro Service
Nov .....	November	PN .....	prior notice
npi .....	non precision instrument	POB .....	persons on board
Nr or No .....	number	POL .....	Petrol, Oils and Lubricants
NS .....	Naval Station	posn .....	position
NS ABTMT .....	Noise Abatement	PPR .....	prior permission required
NSA .....	Naval Support Activity	prcht .....	parachute
NSF .....	Naval Support Facility	pref .....	prefer
NSTD, nstd .....	nonstandard	prev .....	previous

Abbreviation.....	Description
prim .....	primary
prk .....	park
PRM .....	Precision Runway Monitor
pro .....	procedure
proh .....	prohibited
pt .....	point
PTD .....	Pilot to Dispatcher
pub .....	publication
publ .....	publish
PVASI .....	Pulsating Visual Approach Slope Indicator
pvt .....	private
pwr .....	power
QFE.....	Altimeter Setting above station
QNE .....	Altimeter Setting of 29.92 inches which provides height above standard datum plane
QNH.....	Altimeter Setting which provides height above mean sea level
qtrs .....	quarters
quad.....	quadrant
R/T.....	Radiotelephony
R/W .....	Rotary/Wing
RACON .....	Radar Beacon
rad .....	radius, radial
RAIL.....	Runway Alignment Indicator Lights
RAMCC.....	Regional Air Movement Control Center
R-AOE .....	Regular Airport of Entry
RAPCON.....	Radar Approach Control (USAF)
RATCF .....	Radar Air Traffic Control Facility (Navy)
RCAG .....	Remote Center Air to Ground Facility
RCAGL .....	Remote Center Air to Ground Facility Long Range
RCL.....	runway centerline
RCLS.....	Runway Centerline Light System
RCO .....	Remote Communications Outlet
rcpt .....	reception
RCR .....	Runway Condition Reading
rcv .....	receive
rcvr .....	receiver
rdo .....	radio
reconst .....	reconstruct
reful .....	refueling
reg .....	regulation, regular
REIL.....	Runway End Identifier Lights
rel .....	reliable
relctd .....	relocated
REP .....	Reporting Point
req .....	request
RETIL .....	Rapid Exit Taxiway Indicator Light
Rgn .....	Region
Rgnl .....	Regional
rgt .....	right
rgt tfc .....	right traffic
rigd .....	realigned
RLLS .....	Runway Lead-in Light System
rmk .....	remark
rng .....	range, radio range
RNP .....	Required Navigation Performance
RON .....	Remain Overnight
Rot Lt or Bcn.....	Rotating Light or Beacon
RPI .....	Runway Point of Intercept
rpt.....	report
rqr.....	require

Abbreviation.....	Description
RR.....	Railroad
RRP .....	Runway Reference Point
RSC .....	Runway Surface Condition
RSDU.....	Radar Storm Detection Unit
RSE .....	Runway Starter Extension/Starter Strip
RSRS .....	Reduced Same Runway Separation
rstd .....	restricted
rte .....	route
ruf .....	rough
RVR.....	Runway Visual Range
RVSM .....	Reduced Vertical Separation Minima
rwy .....	runway
S .....	South
S/D.....	Seadrome
SALS.....	Short Approach Lighting System
SAR .....	Search and Rescue
Sat.....	Saturday
SAVASI.....	Simplified Abbreviated Visual Approach Slope Indicator
SAWRS .....	Supplement Aviation Weather Reporting Station
sby .....	standby
Sched.....	scheduled services
sctr.....	sector
SDF .....	Simplified Directional Facility
SE .....	Southeast
sec.....	second, section
secd .....	secondary
SELCAL.....	Selective Calling System
SELF .....	Strategic Expeditionary Landing Field
SEng.....	Single Engine
Sep.....	September
SFA .....	Single Frequency Approach
sfc .....	surface
SFL.....	Sequence Flashing Lights
SFRA .....	Special Flight Rules Area
SID .....	Standard Instrument Departure
SIDA .....	Secure Identification Display Area
SIF.....	Selective Identification Feature
sked .....	schedule
SM.....	statute miles
SOAP .....	Spectrometric Oil Analysis Program
SOF .....	Supervisor of Flying
SPB .....	Seaplane Base
SR .....	sunrise
SRE .....	Surveillance Radar Element of GCA (Instrument Approach Procedures Identification only)
SS .....	sunset
SSALS/R.....	Simplified Short Approach Lighting System/with RAIL
SSB .....	Single Sideband
SSR .....	Secondary Surveillance Radar
STA .....	Straight-in Approach
std .....	standard
stn .....	station
stor .....	storage
str-in .....	Straight-in
stu .....	student
subj .....	subject
sum .....	summer
Sun.....	Sunday
sur.....	surround
survl .....	survival, surveillance
suspd.....	suspended

**Abbreviation .....Description**

svc.....	service
svcg.....	servicing
SW.....	Southwest
sys.....	system
TA.....	Transition Altitude
TAC.....	Tactical Air Command

- (V) Omnidirectional Approach Lighting System (ODALS) . . . . .
- (D) Navy Parallel Row and Cross Bar . . . . .
- (F) Air Force Overrun . . . . .
- (V) Visual Approach Slope Indicator with Standard Threshold Clearance provided
- (V2) Pulsating Visual Approach Slope Indicator (PVASI)
- (V3) Visual Approach Slope Indicator with a threshold crossing height to accommodate long bodied or jumbo aircraft
- (V4) Tri-color Visual Approach Slope Indicator (TRCV)
- (V5) Approach Path Alignment Panel (APAP)
- (P) Precision Approach Path Indicator (PAPI)

## LEGEND

This directory is a listing of data on record with the FAA on public-use airports, military airports and selected private-use airports specifically requested by the Department of Defense (DoD) for which a DoD Instrument Approach Procedure has been published in the U.S. Terminal Procedures Publication. Additionally this listing contains data for associated terminal control facilities, air route traffic control centers, and radio aids to navigation within the conterminous United States, Puerto Rico and the Virgin Islands. Civil airports and joint Civil/Military airports which are open to the public are listed alphabetically by state, associated city and airport name and cross-referenced by airport name. Military airports and private-use (limited civil access) joint Military/Civil airports are listed alphabetically by state and official airport name and cross-referenced by associated city name. Nav aids, flight service stations and remote communication outlets that are associated with an airport, but with a different name, are listed alphabetically under their own name, as well as under the airport with which they are associated.

The listing of an airport as open to the public in this directory merely indicates the airport operator's willingness to accommodate transient aircraft, and does not represent that the airport conforms with any Federal or local standards, or that it has been approved for use on the part of the general public. Military airports, private-use airports, and private-use (limited civil access) joint Military/Civil airports are open to civil pilots only in an emergency or with prior permission. See Special Notice Section, Civil Use of Military Fields.

The information on obstructions is taken from reports submitted to the FAA. Obstruction data has not been verified in all cases. Pilots are cautioned that objects not indicated in this tabulation (or on the airports sketches and/or charts) may exist which can create a hazard to flight operation. Detailed specifics concerning services and facilities tabulated within this directory are contained in the Aeronautical Information Manual, Basic Flight Information and ATC Procedures.

The legend items that follow explain in detail the contents of this Directory and are keyed to the circled numbers on the sample on the preceding pages.

**① CITY/AIRPORT NAME**

Civil and joint Civil/Military airports which are open to the public are listed alphabetically by state and associated city. Where the city name is different from the airport name the city name will appear on the line above the airport name. Airports with the same associated city name will be listed alphabetically by airport name and will be separated by a dashed rule line. A solid rule line will separate all others. FAA approved helipads and seaplane landing areas associated with a land airport will be separated by a dotted line. Military airports and private-use (limited civil access) joint Military/Civil airports are listed alphabetically by state and official airport name.

**② ALTERNATE NAME**

Alternate names, if any, will be shown in parentheses.

**③ LOCATION IDENTIFIER**

The location identifier is a three or four character FAA code followed by a four-character ICAO code, when assigned, to airports. If two different military codes are assigned, both codes will be shown with the primary operating agency's code listed first. These identifiers are used by ATC in lieu of the airport name in flight plans, flight strips and other written records and computer operations. Zeros will appear with a slash to differentiate them from the letter "O".

**④ OPERATING AGENCY**

Airports within this directory are classified into two categories, Military/Federal Government and Civil airports open to the general public, plus selected private-use airports. The operating agency is shown for military, private-use and joint use airports. The operating agency is shown by an abbreviation as listed below. When an organization is a tenant, the abbreviation is enclosed in parenthesis. No classification indicates the airport is open to the general public with no military tenant.

A	US Army	MC	Marine Corps
AFRC	Air Force Reserve Command	MIL/CIV	Joint Use Military/Civil Limited Civil Access
AF	US Air Force	N	Navy
ANG	Air National Guard	NAF	Naval Air Facility
AR	US Army Reserve	NAS	Naval Air Station
ARNG	US Army National Guard	NASA	National Air and Space Administration
CG	US Coast Guard	P	US Civil Airport Wherein Permit Covers Use by Transient Military Aircraft
CIV/MIL	Joint Use Civil/Military Open to the Public	PVT	Private Use Only (Closed to the Public)
DND	Department of National Defense Canada		
DOE	Department of Energy		

**⑤ AIRPORT LOCATION**

Airport location is expressed as distance and direction from the center of the associated city in nautical miles and cardinal points, e.g., 3 N.

**⑥ TIME CONVERSION**

Hours of operation of all facilities are expressed in Coordinated Universal Time (UTC) and shown as "Z" time. The directory indicates the number of hours to be subtracted from UTC to obtain local standard time and local daylight saving time UTC-5(-4DT). The symbol ‡ indicates that during periods of Daylight Saving Time (DST) effective hours will be one hour earlier than shown. In those areas where daylight saving time is not observed the (-4DT) and ‡ will not be shown. Daylight saving time is in effect from 0200 local time the second Sunday in March to 0200 local time the first Sunday in November. Canada and all U.S. Conterminous States observe daylight saving time except Arizona and Puerto Rico, and the Virgin Islands. If the state observes daylight saving time and the operating times are other than daylight saving times, the operating hours will include the dates, times and no ‡ symbol will be shown, i.e., April 15-Aug 31 0630-1700Z, Sep 1-Apr 14 0600-1700Z.

**7 GEOGRAPHIC POSITION OF AIRPORT—AIRPORT REFERENCE POINT (ARP)**

Positions are shown as hemisphere, degrees, minutes and hundredths of a minute and represent the approximate geometric center of all usable runway surfaces.

**8 CHARTS**

Charts refer to the Sectional Chart and Low and High Altitude Enroute Chart and panel on which the airport or facility is depicted. Pacific Enroute Chart will be indicated by P. Area Enroute Charts will be indicated by A. Helicopter Chart depictions will be indicated as COPTER. IFR Gulf of Mexico West and IFR Gulf of Mexico Central will be referenced as GOMW and GOMC.

**9 INSTRUMENT APPROACH PROCEDURES, AIRPORT DIAGRAMS**

IAP indicates an airport for which a prescribed (Public Use) FAA Instrument Approach Procedure has been published. DIAP indicates an airport for which a prescribed DoD Instrument Approach Procedure has been published in the U.S. Terminal Procedures. See the Special Notice Section of this directory, Civil Use of Military Fields and the Aeronautical Information Manual 5-4-5 Instrument Approach Procedure Charts for additional information. AD indicates an airport for which an airport diagram has been published. Airport diagrams are located in the back of each Chart Supplement volume alphabetically by associated city and airport name.

**10 AIRPORT SKETCH**

The airport sketch, when provided, depicts the airport and related topographical information as seen from the air and should be used in conjunction with the text. It is intended as a guide for pilots in VFR conditions. Symbology that is not self-explanatory will be reflected in the sketch legend. The airport sketch will be oriented with True North at the top.

**11 ELEVATION**

The highest point of an airport's usable runways measured in feet from mean sea level. When elevation is sea level it will be indicated as "00". When elevation is below sea level a minus "-" sign will precede the figure.

**12 ROTATING LIGHT BEACON**

B indicates rotating beacon is available. Rotating beacons operate sunset to sunrise unless otherwise indicated in the AIRPORT REMARKS or MILITARY REMARKS segment of the airport entry.

**13 TRAFFIC PATTERN ALTITUDE**

Traffic Pattern Altitude (TPA)—The first figure shown is TPA above mean sea level. The second figure in parentheses is TPA above airport elevation. TPA will only be published if they differ from the recommended altitudes as described in the AIM, Traffic Patterns. Multiple TPA shall be shown as "TPA—See Remarks" and detailed information shall be shown in the Airport or Military Remarks Section. Traffic pattern data for USAF bases, USN facilities, and U.S. Army airports (including those on which ACC or U.S. Army is a tenant) that deviate from standard pattern altitudes shall be shown in Military Remarks.

**14 AIRPORT OF ENTRY, LANDING RIGHTS, AND CUSTOMS USER FEE AIRPORTS**

U.S. CUSTOMS USER FEE AIRPORT—Private Aircraft operators are frequently required to pay the costs associated with customs processing.

AOE—Airport of Entry. A customs Airport of Entry where permission from U.S. Customs is not required to land. However, at least one hour advance notice of arrival is required.

LRA—Landing Rights Airport. Application for permission to land must be submitted in advance to U.S. Customs. At least one hour advance notice of arrival is required.

NOTE: Advance notice of arrival at both an AOE and LRA airport may be included in the flight plan when filed in Canada or Mexico. Where Flight Notification Service (ADCUS) is available the airport remark will indicate this service. This notice will also be treated as an application for permission to land in the case of an LRA. Although advance notice of arrival may be relayed to Customs through Mexico, Canada, and U.S. Communications facilities by flight plan, the aircraft operator is solely responsible for ensuring that Customs receives the notification. (See Customs, Immigration and Naturalization, Public Health and Agriculture Department requirements in the International Flight Information Manual for further details.)

**U.S. CUSTOMS AIR AND SEA PORTS, INSPECTORS AND AGENTS**

Northeast Sector (New England and Atlantic States—ME to MD)	407-975-1740
Southeast Sector (Atlantic States—DC, WV, VA to FL)	407-975-1780
Central Sector (Interior of the US, including Gulf states—MS, AL, LA)	407-975-1760
Southwest East Sector (OK and eastern TX)	407-975-1840
Southwest West Sector (Western TX, NM and AZ)	407-975-1820
Pacific Sector (WA, OR, CA, HI and AK)	407-975-1800

**15 CERTIFICATED AIRPORT (14 CFR PART 139)**

Airports serving Department of Transportation certified carriers and certified under 14 CFR part 139 are indicated by the Class and the ARFF Index; e.g. Class I, ARFF Index A, which relates to the availability of crash, fire, rescue equipment. Class I airports can have an ARFF Index A through E, depending on the aircraft length and scheduled departures. Class II, III, and IV will always carry an Index A.

**AIRPORT CLASSIFICATIONS**

Type of Air Carrier Operation	Class I	Class II	Class III	Class IV
Scheduled Air Carrier Aircraft with 31 or more passenger seats	X			
Unscheduled Air Carrier Aircraft with 31 or more passengers seats	X	X		X

## AIRPORT/FACILITY DIRECTORY LEGEND

Type of Air Carrier Operation	Class I	Class II	Class III	Class IV
Scheduled Air Carrier Aircraft with 10 to 30 passenger seats	X	X	X	

## INDICES AND AIRCRAFT RESCUE AND FIRE FIGHTING EQUIPMENT REQUIREMENTS

Airport Index	Required No. Vehicles	Aircraft Length	Scheduled Departures	Agent + Water for Foam
A	1	<90'	≥1	500#DC or HALON 1211 or 450#DC + 100 gal H <sub>2</sub> O
B	1 or 2	≥90', <126'	≥5	Index A + 1500 gal H <sub>2</sub> O
		≥126', <159'	<5	
C	2 or 3	≥126', <159'	≥5	Index A + 3000 gal H <sub>2</sub> O
		≥159', <200'	<5	
D	3	≥159', <200'	_____	Index A + 4000 gal H <sub>2</sub> O
		>200'	<5	
E	3	≥200'	≥5	Index A + 6000 gal H <sub>2</sub> O

> Greater Than; < Less Than; ≥ Equal or Greater Than; ≤ Equal or Less Than; H<sub>2</sub>O—Water; DC—Dry Chemical.

NOTE: The listing of ARFF index does not necessarily assure coverage for non-air carrier operations or at other than prescribed times for air carrier. ARFF Index Ltd.—indicates ARFF coverage may or may not be available, for information contact airport manager prior to flight.

### 16 NOTAM SERVICE

All public use landing areas are provided NOTAM service. A NOTAM FILE identifier is shown for individual landing areas, e.g., "NOTAM FILE BNA". See the AIM, Basic Flight Information and ATC Procedures for a detailed description of NOTAMs. Current NOTAMs are available online from the Federal NOTAM System (FNS) NOTAM Search website <https://notams.aim.faa.gov/notamSearch/>, private vendors, or on request from Flight Service. Military NOTAMs are available using the Defense Internet NOTAM Service (DINS) at <https://www.notams.faa.gov>. Pilots flying to or from airports not available through the FNS or DINS can obtain assistance from Flight Service.

### 17 FAA INSPECTION

All airports not inspected by FAA will be identified by the note: Not insp. This indicates that the airport information has been provided by the owner or operator of the field.

### 18 MINIMUM OPERATIONAL NETWORK (MON) AIRPORT DESIGNATION

MON Airports have at least one VOR or ILS instrument approach procedure that can be flown without the need for GPS, WAAS, DME, NDB or RADAR. The primary purpose of the MON designation is for recovery in case of GPS outage.

### 19 RUNWAY DATA

Runway information is shown on two lines. That information common to the entire runway is shown on the first line while information concerning the runway ends is shown on the second or following line. Runway direction, surface, length, width, weight bearing capacity, lighting, and slope, when available are shown for each runway. Multiple runways are shown with the longest runway first. Direction, length, width, and lighting are shown for sea-lanes. The full dimensions of helipads are shown, e.g., 50X150. Runway data that requires clarification will be placed in the remarks section.

#### RUNWAY DESIGNATION

Runways are normally numbered in relation to their magnetic orientation rounded off to the nearest 10 degrees. Parallel runways can be designated L (left)/R (right)/C (center). Runways may be designated as Ultralight or assault strips. Assault strips are shown by magnetic bearing.

#### RUNWAY DIMENSIONS

Runway length and width are shown in feet. Length shown is runway end to end including displaced thresholds, but excluding those areas designed as overruns.

#### RUNWAY SURFACE AND SURFACE TREATMENT

Runway lengths prefixed by the letter "H" indicate that the runways are hard surfaced (concrete, asphalt, or part asphalt-concrete). If the runway length is not prefixed, the surface is sod, clay, etc. The runway surface composition is indicated in parentheses after runway length as follows:

(AFSC)—Aggregate friction seal coat

(GRVL)—Gravel, or cinders

(SAND)—Sand

- |   |  |                  |
|---|--|------------------|
| (AM2)—Temporary metal planks coated with nonskid material | (MATS)—Pierced steel planking, landing mats, membranes | (TURF)—Turf      |
| (ASPH)—Asphalt  | (PEM)—Part concrete, part asphalt                      | (TRTD)—Treated   |
| (CONC)—Concrete   | (PFC)—Porous friction courses                          | (WC)—Wire combed |
| (DIRT)—Dirt   | (PSP)—Pierced steel plank                              |                  |
| (GRVD)—Grooved  | (RFSC)—Rubberized friction seal coat                   |                  |

### RUNWAY WEIGHT BEARING CAPACITY

Runway strength data shown in this publication is derived from available information and is a realistic estimate of capability at an average level of activity. It is not intended as a maximum allowable weight or as an operating limitation. Many airport pavements are capable of supporting limited operations with gross weights in excess of the published figures. Permissible operating weights, insofar as runway strengths are concerned, are a matter of agreement between the owner and user. When desiring to operate into any airport at weights in excess of those published in the publication, users should contact the airport management for permission. Runway strength figures are shown in thousand of pounds, with the last three figures being omitted. Add 000 to figure following S, D, 2S, 2T, AUW, SWL, etc., for gross weight capacity. A blank space following the letter designator is used to indicate the runway can sustain aircraft with this type landing gear, although definite runway weight bearing capacity figures are not available, e.g., S, D. Applicable codes for typical gear configurations with S=Single, D=Dual, T=Triple and Q=Quadruple:

CURRENT	NEW	NEW DESCRIPTION
S	S	Single wheel type landing gear (DC3), (C47), (F15), etc.
D	D	Dual wheel type landing gear (BE1900), (B737), (A319), etc.
T	D	Dual wheel type landing gear (P3, C9).
ST	2S	Two single wheels in tandem type landing gear (C130).
TRT	2T	Two triple wheels in tandem type landing gear (C17), etc.
DT	2D	Two dual wheels in tandem type landing gear (B707), etc.
TT	2D	Two dual wheels in tandem type landing gear (B757, KC135).
SBTT	2D/D1	Two dual wheels in tandem/dual wheel body gear type landing gear (KC10).
None	2D/2D1	Two dual wheels in tandem/two dual wheels in tandem body gear type landing gear (A340-600).
DDT	2D/2D2	Two dual wheels in tandem/two dual wheels in double tandem body gear type landing gear (B747, E4).
TTT	3D	Three dual wheels in tandem type landing gear (B777), etc.
TT	D2	Dual wheel gear two struts per side main gear type landing gear (B52).
TDT	C5	Complex dual wheel and quadruple wheel combination landing gear (C5).

AUW—All up weight. Maximum weight bearing capacity for any aircraft irrespective of landing gear configuration.

SWL—Single Wheel Loading. (This includes information submitted in terms of Equivalent Single Wheel Loading (ESWL) and Single Isolated Wheel Loading).

PSI—Pounds per square inch. PSI is the actual figure expressing maximum pounds per square inch runway will support, e.g., (SWL 000/PSI 535).

Omission of weight bearing capacity indicates information unknown.

The ACN/PCN System is the ICAO standard method of reporting pavement strength for pavements with bearing strengths greater than 12,500 pounds. The Pavement Classification Number (PCN) is established by an engineering assessment of the runway. The PCN is for use in conjunction with an Aircraft Classification Number (ACN). Consult the Aircraft Flight Manual, Flight Information Handbook, or other appropriate source for ACN tables or charts. Currently, ACN data may not be available for all aircraft. If an ACN table or chart is available, the ACN can be calculated by taking into account the aircraft weight, the pavement type, and the subgrade category. For runways that have been evaluated under the ACN/PCN system, the PCN will be shown as a five-part code (e.g. PCN 80 R/B/W/T). Details of the coded format are as follows:

NOTE: Prior permission from the airport controlling authority is required when the ACN of the aircraft exceeds the published PCN or aircraft tire pressure exceeds the published limits.

- |  |  |
|--|--|
| <p>(1) The PCN NUMBER—The reported PCN indicates that an aircraft with an ACN equal or less than the reported PCN can operate on the pavement subject to any limitation on the tire pressure.</p> <p>(2) The type of pavement:<br/>R — Rigid<br/>F — Flexible</p> <p>(3) The pavement subgrade category:<br/>A — High<br/>B — Medium<br/>C — Low<br/>D — Ultra-low</p> | <p>(4) The maximum tire pressure authorized for the pavement:<br/>W — Unlimited, no pressure limit<br/>X — High, limited to 254 psi (1.75 MPa)<br/>Y — Medium, limited to 181 psi (1.25MPa)<br/>Z — Low, limited to 73 psi (0.50 MPa)</p> <p>(5) Pavement evaluation method:<br/>T — Technical evaluation<br/>U — By experience of aircraft using the pavement</p> |
|--|--|

## RUNWAY LIGHTING

Lights are in operation sunset to sunrise. Lighting available by prior arrangement only or operating part of the night and/or pilot controlled lighting with specific operating hours are indicated under airport or military remarks. At USN/USMC facilities lights are available only during airport hours of operation. Since obstructions are usually lighted, obstruction lighting is not included in this code. Unlighted obstructions on or surrounding an airport will be noted in airport or military remarks. Runway lights nonstandard (NSTD) are systems for which the light fixtures are not FAA approved L-800 series: color, intensity, or spacing does not meet FAA standards. Nonstandard runway lights, VASI, or any other system not listed below will be shown in airport remarks or military service. Temporary, emergency or limited runway edge lighting such as flares, smudge pots, lanterns or portable runway lights will also be shown in airport remarks or military service. Types of lighting are shown with the runway or runway end they serve.

NSTD—Light system fails to meet FAA standards.	SALS—Short Approach Lighting System.
LIRL—Low Intensity Runway Lights.	SALSF—Short Approach Lighting System with Sequenced Flashing Lights.
MIRL—Medium Intensity Runway Lights.	SSALS—Simplified Short Approach Lighting System.
HIRL—High Intensity Runway Lights.	SSALF—Simplified Short Approach Lighting System with Sequenced Flashing Lights.
RAIL—Runway Alignment Indicator Lights.	SSALR—Simplified Short Approach Lighting System with Runway Alignment Indicator Lights.
REIL—Runway End Identifier Lights.	ALSAF—High Intensity Approach Lighting System with Sequenced Flashing Lights.
CL—Centerline Lights.	ALSF1—High Intensity Approach Lighting System with Sequenced Flashing Lights, Category I, Configuration.
TDZL—Touchdown Zone Lights.	ALSF2—High Intensity Approach Lighting System with Sequenced Flashing Lights, Category II, Configuration.
ODALS—Omni Directional Approach Lighting System.	SF—Sequenced Flashing Lights.
AF OVRN—Air Force Overrun 1000' Standard Approach Lighting System.	OLS—Optical Landing System.
MALS—Medium Intensity Approach Lighting System.	WAVE—OFF.
MALSF—Medium Intensity Approach Lighting System with Sequenced Flashing Lights.	
MALSRL—Medium Intensity Approach Lighting System with Runway Alignment Indicator Lights.	
RLLS—Runway Lead-in Light System	

NOTE: Civil ALSF2 may be operated as SSALR during favorable weather conditions. When runway edge lights are positioned more than 10 feet from the edge of the usable runway surface a remark will be added in the "Remarks" portion of the airport entry. This is applicable to Air Force, Air National Guard and Air Force Reserve Bases, and those joint use airfields on which they are tenants.

## VISUAL GLIDESLOPE INDICATORS

APAP—A system of panels, which may or may not be lighted, used for alignment of approach path.

PNIL APAP on left side of runway	PNIR APAP on right side of runway
----------------------------------	-----------------------------------

PAPI—Precision Approach Path Indicator

P2L 2-identical light units placed on left side of runway	P4L 4-identical light units placed on left side of runway
P2R 2-identical light units placed on right side of runway	P4R 4-identical light units placed on right side of runway

PVASI—Pulsating/steady burning visual approach slope indicator, normally a single light unit projecting two colors.

PSIL PVASI on left side of runway	PSIR PVASI on right side of runway
-----------------------------------	------------------------------------

SAVASI—Simplified Abbreviated Visual Approach Slope Indicator

S2L 2-box SAVASI on left side of runway	S2R 2-box SAVASI on right side of runway
---	--

TRCV—Tri-color visual approach slope indicator, normally a single light unit projecting three colors.

TRIL TRCV on left side of runway	TRIR TRCV on right side of runway
----------------------------------	-----------------------------------

VASI—Visual Approach Slope Indicator

V2L 2-box VASI on left side of runway	V6L 6-box VASI on left side of runway
V2R 2-box VASI on right side of runway	V6R 6-box VASI on right side of runway
V4L 4-box VASI on left side of runway	V12 12-box VASI on both sides of runway
V4R 4-box VASI on right side of runway	V16 16-box VASI on both sides of runway

NOTE: Approach slope angle and threshold crossing height will be shown when available; i.e., -GA 3.5° TCH 37'.

## PILOT CONTROL OF AIRPORT LIGHTING

Key Mike	Function
7 times within 5 seconds	Highest intensity available
5 times within 5 seconds	Medium or lower intensity (Lower REIL or REIL-Off)
3 times within 5 seconds	Lowest intensity available (Lower REIL or REIL-Off)

Available systems will be indicated in the Service section, e.g., **LGT** ACTIVATE HIRL Rwy 07-25, MALSRL Rwy 07, and VASI Rwy 07-122.8.

Where the airport is not served by an instrument approach procedure and/or has an independent type system of different specification installed by the airport sponsor, descriptions of the type lights, method of control, and operating frequency will be

explained in clear text. See AIM, "Aeronautical Lighting and Other Airport Visual Aids," for a detailed description of pilot control of airport lighting.

### RUNWAY SLOPE

When available, runway slope data will be provided. Runway slope will be shown only when it is 0.3 percent or greater. On runways less than 8000 feet, the direction of the slope up will be indicated, e.g., 0.3% up NW. On runways 8000 feet or greater, the slope will be shown (up or down) on the runway end line, e.g., RWY 13: 0.3% up., RWY 31: Pole. Rgt tfc. 0.4% down.

### RUNWAY END DATA

Information pertaining to the runway approach end such as approach lights, touchdown zone lights, runway end identification lights, visual glideslope indicators, displaced thresholds, controlling obstruction, and right hand traffic pattern, will be shown on the specific runway end. "Rgt tfc"—Right traffic indicates right turns should be made on landing and takeoff for specified runway end. Runway Visual Range shall be shown as "RVR" appended with "T" for touchdown, "M" for midpoint, and "R" for rollout; e.g., RVR-TMR.

## 20 LAND AND HOLD—SHORT OPERATIONS (LAHSO)

LAHSO is an acronym for "Land and Hold-Short Operations" These operations include landing and holding short of an intersection runway, an intersecting taxiway, or other predetermined points on the runway other than a runway or taxiway. Measured distance represents the available landing distance on the landing runway, in feet.

Specific questions regarding these distances should be referred to the air traffic manager of the facility concerned. The Aeronautical Information Manual contains specific details on hold—short operations and markings.

## 21 RUNWAY DECLARED DISTANCE INFORMATION

TORA—Take-off Run Available. The length of runway declared available and suitable for the ground run of an aeroplane take-off. TODA—Take-off Distance Available. The length of the take-off run available plus the length of the clearway, if provided.

ASDA—Accelerate-Stop Distance Available. The length of the take-off run available plus the length of the stopway, if provided.

LDA—Landing Distance Available. The length of runway which is declared available and suitable for the ground run of an aeroplane landing.

## 22 ARRESTING GEAR/SYSTEMS

Arresting gear is shown as it is located on the runway. The a-gear distance from the end of the appropriate runway (or into the overrun) is indicated in parentheses. A-Gear which has a bi-direction capability and can be utilized for emergency approach end engagement is indicated by a (B). Up to 15 minutes advance notice may be required for rigging A-Gear for approach and engagement. Airport listing may show availability of other than US Systems. This information is provided for emergency requirements only. Refer to current aircraft operating manuals for specific engagement weight and speed criteria based on aircraft structural restrictions and arresting system limitations.

Following is a list of current systems referenced in this publication identified by both Air Force and Navy terminology:

### BI-DIRECTIONAL CABLE (B)

<u>TYPE</u>	<u>DESCRIPTION</u>
BAK-9	Rotary friction brake.
BAK-12A	Standard BAK-12 with 950 foot run out, 1-inch cable and 40,000 pound weight setting. Rotary friction brake.
BAK-12B	Extended BAK-12 with 1200 foot run, 1¼ inch Cable and 50,000 pounds weight setting. Rotary friction brake.
E28	Rotary Hydraulic (Water Brake).
M21	Rotary Hydraulic (Water Brake) Mobile.

The following device is used in conjunction with some aircraft arresting systems:

BAK-14	A device that raises a hook cable out of a slot in the runway surface and is remotely positioned for engagement by the tower on request. (In addition to personnel reaction time, the system requires up to five seconds to fully raise the cable.)
H	A device that raises a hook cable out of a slot in the runway surface and is remotely positioned for engagement by the tower on request. (In addition to personnel reaction time, the system requires up to one and one-half seconds to fully raise the cable.)

### UNI-DIRECTIONAL CABLE

<u>TYPE</u>	<u>DESCRIPTION</u>
MB60	Textile brake—an emergency one-time use, modular braking system employing the tearing of specially woven textile straps to absorb the kinetic energy.
E5/E5-1/E5-3	Chain Type. At USN/USMC stations E-5 A-GEAR systems are rated, e.g., E-5 RATING-13R-1100 HW (DRY), 31L/R-1200 STD (WET). This rating is a function of the A-GEAR chain weight and length and is used to determine the maximum aircraft engaging speed. A dry rating applies to a stabilized surface (dry or wet) while a wet rating takes into account the amount (if any) of wet overrun that is not capable of withstanding the aircraft weight. These ratings are published under Service/Military/A-Gear in the entry.

### FOREIGN CABLE

<u>TYPE</u>	<u>DESCRIPTION</u>	<u>US EQUIVALENT</u>
44B-3H	Rotary Hydraulic (Water Brake)	
CHAG	Chain	E-5

### UNI-DIRECTIONAL BARRIER

<u>TYPE</u>	<u>DESCRIPTION</u>
MA-1A	Web barrier between stanchions attached to a chain energy absorber.
BAK-15	Web barrier between stanchions attached to an energy absorber (water squeezer, rotary friction, chain). Designed for wing engagement.

NOTE: Landing short of the runway threshold on a runway with a BAK-15 in the underrun is a significant hazard. The barrier in the down position still protrudes several inches above the underrun. Aircraft contact with the barrier short of the runway

threshold can cause damage to the barrier and substantial damage to the aircraft.

OTHER

<p><u>TYPE</u> EMAS</p>	<p><u>DESCRIPTION</u> Engineered Material Arresting System, located beyond the departure end of the runway, consisting of high energy absorbing materials which will crush under the weight of an aircraft.</p>
-----------------------------	---

FUEL

CODE	FUEL	CODE	FUEL
80	Grade 80 gasoline (Red)	B	Jet B, Wide-cut, turbine fuel without FS-II*, FP** minus 50° C.
100	Grade 100 gasoline (Green)	B+	Jet B, Wide-cut, turbine fuel with FS-II*, FP** minus 50° C
100LL	100LL gasoline (low lead) (Blue)	J4 (JP4)	(JP-4 military specification) FP** minus 58° C.
115	Grade 115 gasoline (115/145 military specification) (Purple)	J5 (JP5)	(JP-5 military specification) Kerosene with FS-II, FP** minus 46°C.
A	Jet A, Kerosene, without FS-II*, FP** minus 40° C.	J8 (JP8)	(JP-8 military specification) Jet A-1, Kerosene with FS-II*, CI/LI#, SDA##, FP** minus 47°C.
A+	Jet A, Kerosene, with FS-II*, FP** minus 40°C.	J8+100	(JP-8 military specification) Jet A-1, Kerosene with FS-II*, CI/LI#, SDA##, FP** minus 47°C, with +100 fuel additive that improves thermal stability characteristics of kerosene jet fuels.
A++	Jet A, Kerosene, with FS-II*, CI/LI#, SDA##, FP** minus 40°C.	J	(Jet Fuel Type Unknown)
A++100	Jet A, Kerosene, with FS-II*, CI/LI#, SDA##, FP** minus 40°C, with +100 fuel additive that improves thermal stability characteristics of kerosene jet fuels.	MOGAS	Automobile gasoline which is to be used as aircraft fuel.
A1	Jet A-1, Kerosene, without FS-II*, FP** minus 47°C.	UL91	Unleaded Grade 91 gasoline
A1+	Jet A-1, Kerosene with FS-II*, FP** minus 47° C.	UL94	Unleaded Grade 94 gasoline

\*(Fuel System Icing Inhibitor)    \*\* (Freeze Point)    # (Corrosion Inhibitors/Lubricity Improvers)    ## (Static Dissipator Additive)

**NOTE:** Certain automobile gasoline may be used in specific aircraft engines if a FAA supplemental type certificate has been obtained. Automobile gasoline, which is to be used in aircraft engines, will be identified as "MOGAS", however, the grade/type and other octane rating will not be published.

Data shown on fuel availability represents the most recent information the publisher has been able to acquire. Because of a variety of factors, the fuel listed may not always be obtainable by transient civil pilots. Confirmation of availability of fuel should be made directly with fuel suppliers at locations where refueling is planned.

SERVICE—MILITARY

Specific military services available at the airport are listed under this general heading. Remarks applicable to any military service are shown in the individual service listing.

JET AIRCRAFT STARTING UNITS (JASU)—MILITARY

The numeral preceding the type of unit indicates the number of units available. The absence of the numeral indicates ten or more units available. If the number of units is unknown, the number one will be shown. Absence of JASU designation indicates non-availability.

The following is a list of current JASU systems referenced in this publication:

**USAF JASU (For variations in technical data, refer to T.O. 35-1-7.)**

ELECTRICAL STARTING UNITS:

AM32A-86	AC: 115/200v, 3 phase, 90 kva, 0.8 pf, 4 wire DC: 28v, 1500 amp, 72 kw (with TR pack)
MC-1A	AC: 115/208v, 400 cycle, 3 phase, 37.5 kva, 0.8 pf, 108 amp, 4 wire DC: 28v, 500 amp, 14 kw
MD-3	AC: 115/208v, 400 cycle, 3 phase, 60 kva, 0.75 pf, 4 wire DC: 28v, 1500 amp, 45 kw, split bus
MD-3A	AC: 115/208v, 400 cycle, 3 phase, 60 kva, 0.75 pf, 4 wire DC: 28v, 1500 amp, 45 kw, split bus

# AIRPORT/FACILITY DIRECTORY LEGEND

19

MD-3M	AC: 115/208v, 400 cycle, 3 phase, 60 kva, 0.75 pf, 4 wire DC: 28v, 500 amp, 15 kw
MD-4	AC: 120/208v, 400 cycle, 3 phase, 62.5 kva, 0.8 pf, 175 amp, "WYE" neutral ground, 4 wire, 120v, 400 cycle, 3 phase, 62.5 kva, 0.8 pf, 303 amp, "DELTA" 3 wire, 120v, 400 cycle, 1 phase, 62.5 kva, 0.8 pf, 520 amp, 2 wire

## AIR STARTING UNITS

AM32-95	150 +/- 5 lb/min (2055 +/- 68 cfm) at 51 +/- 2 psia
AM32A-95	150 +/- 5 lb/min @ 49 +/- 2 psia (35 +/- 2 psig)
LASS	150 +/- 5 lb/min @ 49 +/- 2 psia
MA-1A	82 lb/min (1123 cfm) at 130° air inlet temp, 45 psia (min) air outlet press
MC-1	15 cfm, 3500 psia
MC-1A	15 cfm, 3500 psia
MC-2A	15 cfm, 200 psia
MC-11	8,000 cu in cap, 4000 psig, 15 cfm

## COMBINED AIR AND ELECTRICAL STARTING UNITS:

AGPU	AC: 115/200v, 400 cycle, 3 phase, 30 kw gen DC: 28v, 700 amp AIR: 60 lb/min @ 40 psig @ sea level
AM32A-60*	AIR: 120 +/- 4 lb/min (1644 +/- 55 cfm) at 49 +/- 2 psia AC: 120/208v, 400 cycle, 3 phase, 75 kva, 0.75 pf, 4 wire, 120v, 1 phase, 25 kva DC: 28v, 500 amp, 15 kw
AM32A-60A	AIR: 150 +/- 5 lb/min (2055 +/- 68 cfm) at 51 +/- 2 psia AC: 120/208v, 400 cycle, 3 phase, 75 kva, 0.75 pf, 4 wire DC: 28v, 200 amp, 5.6 kw
AM32A-60B*	AIR: 130 lb/min, 50 psia AC: 120/208v, 400 cycle, 3 phase, 75 kva, 0.75 pf, 4 wire DC: 28v, 200 amp, 5.6 kw

\*NOTE: During combined air and electrical loads, the pneumatic circuitry takes preference and will limit the amount of electrical power available.

## USN JASU

### ELECTRICAL STARTING UNITS:

NC-8A/A1	DC: 500 amp constant, 750 amp intermittent, 28v; AC: 60 kva @ .8 pf, 115/200v, 3 phase, 400 Hz.
NC-10A/A1/B/C	DC: 750 amp constant, 1000 amp intermittent, 28v; AC: 90 kva, 115/200v, 3 phase, 400 Hz.

### AIR STARTING UNITS:

GTC-85/GTE-85	120 lbs/min @ 45 psi.
MSU-200NAV/A/U47A-5	204 lbs/min @ 56 psia.
WELLS AIR START SYSTEM	180 lbs/min @ 75 psi or 120 lbs/min @ 45 psi. Simultaneous multiple start capability.

### COMBINED AIR AND ELECTRICAL STARTING UNITS:

NCPP-105/RCPT	180 lbs/min @ 75 psi or 120 lbs/min @ 45 psi. 700 amp, 28v DC. 120/208v, 400 Hz AC, 30 kva.
---------------	---

## ARMY JASU

59B2-1B	28v, 7.5 kw, 280 amp.
---------	-----------------------

## OTHER JASU

### ELECTRICAL STARTING UNITS (DND):

CE12	AC 115/200v, 140 kva, 400 Hz, 3 phase
CE13	AC 115/200v, 60 kva, 400 Hz, 3 phase
CE14	AC/DC 115/200v, 140 kva, 400 Hz, 3 phase, 28vDC, 1500 amp
CE15	DC 22-35v, 500 amp continuous 1100 amp intermittent
CE16	DC 22-35v, 500 amp continuous 1100 amp intermittent soft start

### AIR STARTING UNITS (DND):

CA2	ASA 45.5 psig, 116.4 lb/min
-----	-----------------------------

### COMBINED AIR AND ELECTRICAL STARTING UNITS (DND)

CEA1	AC 120/208v, 60 kva, 400 Hz, 3 phase DC 28v, 75 amp AIR 112.5 lb/min, 47 psig
------	--

### ELECTRICAL STARTING UNITS (OTHER)

C-26	28v 45kw 115-200v 15kw 380-800 Hz 1 phase 2 wire
C-26-B, C-26-C	28v 45kw: Split Bus: 115-200v 15kw 380-800 Hz 1 phase 2 wire
E3	DC 28v/10kw

### AIR STARTING UNITS (OTHER):

A4	40 psi/2 lb/sec (LPAS Mk12, Mk12L, Mk12A, Mk1, Mk2B)
----	--

MA-1 150 Air HP, 115 lb/min 50 psia  
 MA-2 250 Air HP, 150 lb/min 75 psia

## CARTRIDGE:

MXU-4A USAF

**FUEL—MILITARY**

Fuel available through US Military Base supply, DESC Into-Plane Contracts and/or reciprocal agreement is listed first and is followed by (Mil). At commercial airports where Into-Plane contracts are in place, the name of the refueling agent is shown. Military fuel should be used first if it is available. When military fuel cannot be obtained but Into-Plane contract fuel is available, Government aircraft must refuel with the contract fuel and applicable refueling agent to avoid any breach in contract terms and conditions. Fuel not available through the above is shown preceded by NC (no contract). When fuel is obtained from NC sources, local purchase procedures must be followed. The US Military Aircraft Identaplates DD Form 1896 (Jet Fuel), DD Form 1897 (Avgas) and AF Form 1245 (Avgas) are used at military installations only. The US Government Aviation Into-Plane Reimbursement (AIR) Card (currently issued by AVCARD) is the instrument to be used to obtain fuel under a DESC Into-Plane Contract and for NC purchases if the refueling agent at the commercial airport accepts the AVCARD. A current list of contract fuel locations is available online at [https://cis.energy.dla.mil/ip\\_cis/](https://cis.energy.dla.mil/ip_cis/). See legend item 14 for fuel code and description.

**SUPPORTING FLUIDS AND SYSTEMS—MILITARY**CODE

ADI Anti-Detonation Injection Fluid—Reciprocating Engine Aircraft.  
 W Water Thrust Augmentation—Jet Aircraft.  
 WAI Water-Alcohol Injection Type, Thrust Augmentation—Jet Aircraft.  
 SP Single Point Refueling.  
 PRESAIR Air Compressors rated 3,000 PSI or more.  
 De-Ice Anti-icing/De-icing/Defrosting Fluid (MIL-A-8243).

**OXYGEN:**

LPOX Low pressure oxygen servicing.  
 HPOX High pressure oxygen servicing.  
 LHOX Low and high pressure oxygen servicing.  
 LOX Liquid oxygen servicing.  
 OXRB Oxygen replacement bottles. (Maintained primarily at Naval stations for use in acft where oxygen can be replenished only by replacement of cylinders.)  
 OX Indicates oxygen servicing when type of servicing is unknown.

NOTE: Combinations of above items is used to indicate complete oxygen servicing available;

LHOXRB Low and high pressure oxygen servicing and replacement bottles;  
 LPOXRB Low pressure oxygen replacement bottles only, etc.

NOTE: Aircraft will be serviced with oxygen procured under military specifications only. Aircraft will not be serviced with medical oxygen.

**NITROGEN:**

LPNIT — Low pressure nitrogen servicing.  
 HPNIT — High pressure nitrogen servicing.  
 LHNIT — Low and high pressure nitrogen servicing.

**OIL—MILITARY**

## US AVIATION OILS (MIL SPECS):

<u>CODE</u>	<u>GRADE, TYPE</u>
O-113	1065, Reciprocating Engine Oil (MIL-L-6082)
O-117	1100, Reciprocating Engine Oil (MIL-L-6082)
O-117+	1100, O-117 plus cyclohexanone (MIL-L-6082)
O-123	1065, (Dispersant), Reciprocating Engine Oil (MIL-L-22851 Type III)
O-128	1100, (Dispersant), Reciprocating Engine Oil (MIL-L-22851 Type II)
O-132	1005, Jet Engine Oil (MIL-L-6081)
O-133	1010, Jet Engine Oil (MIL-L-6081)
O-147	None, MIL-L-6085A Lubricating Oil, Instrument, Synthetic
O-148	None, MIL-L-7808 (Synthetic Base) Turbine Engine Oil
O-149	None, Aircraft Turbine Engine Synthetic, 7.5c St
O-155	None, MIL-L-6086C, Aircraft, Medium Grade
O-156	None, MIL-L-23699 (Synthetic Base), Turboprop and Turboshaft Engines
JOAP/SOAP	Joint Oil Analysis Program. JOAP support is furnished during normal duty hours, other times on request. (JOAP and SOAP programs provide essentially the same service, JOAP is now the standard joint service supported program.)

**TRANSIENT ALERT (TRAN ALERT)—MILITARY**

Tran Alert service is considered to include all services required for normal aircraft turn-around, e.g., servicing (fuel, oil, oxygen, etc.), debriefing to determine requirements for maintenance, minor maintenance, inspection and parking assistance of transient aircraft. Drag chute repack, specialized maintenance, or extensive repairs will be provided within the capabilities and priorities of the base. Delays can be anticipated after normal duty hours/holidays/weekends regardless of the hours of transient maintenance operation. Pilots should not expect aircraft to be serviced for TURN-AROUNDS during time periods when servicing or maintenance manpower

is not available. In the case of airports not operated exclusively by US military, the servicing indicated by the remarks will not always be available for US military aircraft. When transient alert services are not shown, facilities are unknown. NO PRIORITY BASIS—means that transient alert services will be provided only after all the requirements for mission/tactical assigned aircraft have been accomplished.

### 24 AIRPORT REMARKS

The Attendance Schedule is the months, days and hours the airport is actually attended. Airport attendance does not mean watchman duties or telephone accessibility, but rather an attendant or operator on duty to provide at least minimum services (e.g., repairs, fuel, transportation).

Airport Remarks have been grouped in order of applicability. Airport remarks are limited to those items of information that are determined essential for operational use, i.e., conditions of a permanent or indefinite nature and conditions that will remain in effect for more than 30 days concerning aeronautical facilities, services, maintenance available, procedures or hazards, knowledge of which is essential for safe and efficient operation of aircraft. Information concerning permanent closing of a runway or taxiway will not be shown. A note "See Special Notices" shall be applied within this remarks section when a special notice applicable to the entry is contained in the Special Notices section of this publication.

Parachute Jumping indicates parachute jumping areas associated with the airport. See Parachute Jumping Area section of this publication for additional information.

Landing Fee indicates landing charges for private or non-revenue producing aircraft. In addition, fees may be charged for planes that remain over a couple of hours and buy no services, or at major airline terminals for all aircraft.

Note: Unless otherwise stated, remarks including runway ends refer to the runway's approach end.

### 25 MILITARY REMARKS

Joint Civil/Military airports contain both Airport Remarks and Military Remarks. Military Remarks published for these airports are applicable only to the military. Military and joint Military/Civil airports contain only Military Remarks. Remarks contained in this section may not be applicable to civil users. When both sets of remarks exist, the first set is applicable to the primary operator of the airport. Remarks applicable to a tenant on the airport are shown preceded by the tenant organization, i.e., (A) (AF) (N) (ANG), etc. Military airports operate 24 hours unless otherwise specified. Airport operating hours are listed first (airport operating hours will only be listed if they are different than the airport attended hours or if the attended hours are unavailable) followed by pertinent remarks in order of applicability. Remarks will include information on restrictions, hazards, traffic pattern, noise abatement, customs/agriculture/immigration, and miscellaneous information applicable to the Military.

Type of restrictions:

CLOSED: When designated closed, the airport is restricted from use by all aircraft unless stated otherwise. Any closure applying to specific type of aircraft or operation will be so stated. USN/USMC/USAF airports are considered closed during non-operating hours. Closed airports may be utilized during an emergency provided there is a safe landing area.

OFFICIAL BUSINESS ONLY: The airfield is closed to all transient military aircraft for obtaining routine services such as fueling, passenger drop off or pickup, practice approaches, parking, etc. The airfield may be used by aircrews and aircraft if official government business (including civilian) must be conducted on or near the airfield and prior permission is received from the airfield manager.

AF OFFICIAL BUSINESS ONLY OR NAVY OFFICIAL BUSINESS ONLY: Indicates that the restriction applies only to service indicated.

PRIOR PERMISSION REQUIRED (PPR): Airport is closed to transient aircraft unless approval for operation is obtained from the appropriate commander through Chief, Airfield Management or Airfield Operations Officer. Official Business or PPR does not preclude the use of US Military airports as an alternate for IFR flights. If a non-US military airport is used as a weather alternate and requires a PPR, the PPR must be requested and confirmed before the flight departs. The purpose of PPR is to control volume and flow of traffic rather than to prohibit it. Prior permission is required for all aircraft requiring transient alert service outside the published transient alert duty hours. All aircraft carrying hazardous materials must obtain prior permission as outlined in AFJI 11-204, AR 95-27, OPNAVINST 3710.7.

Note: OFFICIAL BUSINESS ONLY AND PPR restrictions are not applicable to Special Air Mission (SAM) or Special Air Resource (SPAR) aircraft providing person or persons on board are designated Code 6 or higher as explained in AFJMAN 11-213, AR 95-11, OPNAVINST 3722-8J. Official Business Only or PPR do not preclude the use of the airport as an alternate for IFR flights.

### 26 AIRPORT MANAGER

The phone number of the airport manager.

**⑳ WEATHER DATA SOURCES**

Weather data sources will be listed alphabetically followed by their assigned frequencies and/or telephone number and hours of operation.

ASOS—Automated Surface Observing System. Reports the same as an AWOS-3 plus precipitation identification and intensity, and freezing rain occurrence;

AWOS—Automated Weather Observing System

AWOS-A—reports altimeter setting (all other information is advisory only).

AWOS-AV—reports altimeter and visibility.

AWOS-1—reports altimeter setting, wind data and usually temperature, dew point and density altitude.

AWOS-2—reports the same as AWOS-1 plus visibility.

AWOS-3—reports the same as AWOS-1 plus visibility and cloud/ceiling data.

AWOS-3P reports the same as the AWOS-3 system, plus a precipitation identification sensor.

AWOS-3PT reports the same as the AWOS-3 system, plus precipitation identification sensor and a thunderstorm/lightning reporting capability.

AWOS-3T reports the same as AWOS-3 system and includes a thunderstorm/lightning reporting capability.

See AIM, Basic Flight Information and ATC Procedures for detailed description of Weather Data Sources.

AWOS-4—reports same as AWOS-3 system, plus precipitation occurrence, type and accumulation, freezing rain, thunderstorm and runway surface sensors.

LAWRS—Limited Aviation Weather Reporting Station where observers report cloud height, weather, obstructions to vision, temperature and dewpoint (in most cases), surface wind, altimeter and pertinent remarks.

LLWAS—indicates a Low Level Wind Shear Alert System consisting of a center field and several field perimeter anemometers.

SAWRS—identifies airports that have a Supplemental Aviation Weather Reporting Station available to pilots for current weather information.

SWSL—Supplemental Weather Service Location providing current local weather information via radio and telephone.

TDWR—indicates airports that have Terminal Doppler Weather Radar.

WSP—indicates airports that have Weather System Processor.

When the automated weather source is broadcast over an associated airport NAVAID frequency (see NAVAID line), it shall be indicated by a bold ASOS or AWOS followed by the frequency, identifier and phone number, if available.

**㉑ COMMUNICATIONS**

Airport terminal control facilities and radio communications associated with the airport shall be shown. When the call sign is not the same as the airport name the call sign will be shown. Frequencies shall normally be shown in ascending order with the primary frequency listed first. Frequencies will be listed, together with sectorization indicated by outbound radials, and hours of operation. Communications will be listed in sequence as follows:

Single Frequency Approach (SFA), Common Traffic Advisory Frequency (CTAF), Aeronautical Advisory Stations (UNICOM) or (AUNICOM), and Automatic Terminal Information Service (ATIS) along with their frequencies are shown, where available, on the line following the heading "COMMUNICATIONS." When the CTAF and UNICOM frequencies are the same, the frequency will be shown as CTAF/UNICOM 122.8.

Frequencies available for Flight Service Station (FSS) facilities will follow in descending order. Remote Communications Outlet (RCO) providing service to the airport followed by the frequency and FSS RADIO name will be shown when available. In Alaska, Airport Advisory Service (AAS) is provided on the CTAF by FSS for select non-tower airports or airports where the tower is not in operation. (See AIM, Para 4-1-9 Traffic Advisory Practices at Airports Without Operating Control Towers or AC 90-66B, "Non-Towered Airport Flight Operations.")

Remote Communications Outlet (RCO)—An unmanned air/ground communications facility that is remotely controlled and provides UHF or VHF communications capability to extend the service range of an FSS.

Civil Communications Frequencies—Civil communications frequencies used in the FSS air/ground system are operated on 122.2,

123.6; emergency 121.5; plus receive-only on 122.1.

- a. 122.2 is assigned as a common en route frequency.
- b. In Alaska, 123.6 is assigned as the airport advisory frequency at select non-tower locations. At airports with a tower, FSS may provide airport advisories on the tower frequency when tower is closed.
- c. 122.1 is the primary receive-only frequency at VORs.
- d. Some FSSs are assigned 50 kHz frequencies in the 122–126 MHz band (e.g., 122.45). Pilots using the FSS A/G system should refer to this directory or appropriate charts to determine frequencies available at the FSS or remotized facility through which they wish to communicate.

Emergency frequency 121.5 and 243.0 are available at FSSs in Alaska, most Towers, Approach Control and RADAR facilities. Frequencies published followed by the letter “T” or “R”, indicate that the facility will only transmit or receive respectively on that frequency. All radio aids to navigation (NAVAID) frequencies are transmit only. In cases where communications frequencies are annotated with (R) or (E), (R) indicates Radar Capability and (E) indicates Emergency Frequency.

#### TERMINAL SERVICES

SFA—Single Frequency Approach.

CTAF—A program designed to get all vehicles and aircraft at airports without an operating control tower on a common frequency.

ATIS—A continuous broadcast of recorded non-control information in selected terminal areas.

D-ATIS—Digital ATIS provides ATIS information in text form outside the standard reception range of conventional ATIS via landline & data link communications and voice message within range of existing transmitters.

AUNICOM—Automated UNICOM is a computerized, command response system that provides automated weather, radio check capability and airport advisory information selected from an automated menu by microphone clicks.

UNICOM—A non-government air/ground radio communications facility which may provide airport information.

PTD—Pilot to Dispatcher.

APP CON—Approach Control. The symbol  $\text{\textcircled{R}}$  indicates radar approach control.

TOWER—Control tower.

GCA—Ground Control Approach System.

GND CON—Ground Control.

GCO—Ground Communication Outlet—An unstaffed, remotely controlled, ground/ground communications facility. Pilots at uncontrolled airports may contact ATC and FSS via VHF to a telephone connection to obtain an instrument clearance or close a VFR or IFR flight plan. They may also get an updated weather briefing prior to takeoff. Pilots will use four “key clicks” on the VHF radio to contact the appropriate ATC facility or six “key clicks” to contact the FSS. The GCO system is intended to be used only on the ground.

DEP CON—Departure Control. The symbol  $\text{\textcircled{R}}$  indicates radar departure control.

CLNC DEL—Clearance Delivery.

CPDLC—Controller Pilot Data Link Communication. FANS ATC data communication capability from the aircraft to the ATC Data Link system.

PRE TAXI CLNC—Pre taxi clearance.

VFR ADVSY SVC—VFR Advisory Service. Service provided by Non-Radar Approach Control. Advisory Service for VFR aircraft (upon a workload basis) ctc APP CON.

COMD POST—Command Post followed by the operator call sign in parenthesis.

PMSV—Pilot-to-Metro Service call sign, frequency and hours of operation, when full service is other than continuous. PMSV installations at which weather observation service is available shall be indicated, following the frequency and/or hours of operation as “Wx obsn svc 1900-0000Z‡” or “other times” may be used when no specific time is given. PMSV facilities manned by forecasters are considered “Full Service”. PMSV facilities manned by weather observers are listed as “Limited Service”.

OPS—Operations followed by the operator call sign in parenthesis.

CON

RANGE

FLT FLW—Flight Following

MEDIVAC

NOTE: Communication frequencies followed by the letter “X” indicate frequency available on request.

**29 AIRSPACE**

Information concerning Class B, C, and part-time D and E surface area airspace shall be published with effective times, if available.

CLASS B—Radar Sequencing and Separation Service for all aircraft in CLASS B airspace.

CLASS C—Separation between IFR and VFR aircraft and sequencing of VFR arrivals to the primary airport.

TRSA—Radar Sequencing and Separation Service for participating VFR Aircraft within a Terminal Radar Service Area.

Class C, D, and E airspace described in this publication is that airspace usually consisting of a 5 NM radius core surface area that begins at the surface and extends upward to an altitude above the airport elevation (charted in MSL for Class C and Class D). Class E surface airspace normally extends from the surface up to but not including the overlying controlled airspace.

When part-time Class C or Class D airspace defaults to Class E, the core surface area becomes Class E. This will be formatted as: **AIRSPACE: CLASS C** svc “times” ctc **APP CON** other times CLASS E:

or

**AIRSPACE: CLASS D** svc “times” other times CLASS E.

When a part-time Class C, Class D or Class E surface area defaults to Class G, the core surface area becomes Class G up to, but not including, the overlying controlled airspace. Normally, the overlying controlled airspace is Class E airspace beginning at either 700’ or 1200’ AGL and may be determined by consulting the relevant VFR Sectional or Terminal Area Charts. This will be formatted as:

**AIRSPACE: CLASS C** svc “times” ctc **APP CON** other times CLASS G, with CLASS E 700’ (or 1200’) AGL & abv:

or

**AIRSPACE: CLASS D** svc “times” other times CLASS G with CLASS E 700’ (or 1200’) AGL & abv:

or

**AIRSPACE: CLASS E** svc “times” other times CLASS G with CLASS E 700’ (or 1200’) AGL & abv.

**NOTE: AIRSPACE SVC “TIMES” INCLUDE ALL ASSOCIATED ARRIVAL EXTENSIONS.** Surface area arrival extensions for instrument approach procedures become part of the primary core surface area. These extensions may be either Class D or Class E airspace and are effective concurrent with the times of the primary core surface area. For example, when a part-time Class C, Class D or Class E surface area defaults to Class G, the associated arrival extensions will default to Class G at the same time. When a part-time Class C or Class D surface area defaults to Class E, the arrival extensions will remain in effect as Class E airspace.

**NOTE: CLASS E AIRSPACE EXTENDING UPWARD FROM 700 FEET OR MORE ABOVE THE SURFACE, DESIGNATED IN CONJUNCTION WITH AN AIRPORT WITH AN APPROVED INSTRUMENT PROCEDURE.**

Class E 700’ AGL (shown as magenta vignette on sectional charts) and 1200’ AGL (blue vignette) areas are designated when necessary to provide controlled airspace for transitioning to/from the terminal and enroute environments. Unless otherwise specified, these 700’/1200’ AGL Class E airspace areas remain in effect continuously, regardless of airport operating hours or surface area status. These transition areas should not be confused with surface areas or arrival extensions.

(See Chapter 3, AIRSPACE, in the Aeronautical Information Manual for further details)

**30 VOR TEST FACILITY (VOT)**

The VOT transmits a signal which provided users a convenient means to determine the operational status and accuracy of an aircraft VOR receiver while on the ground. Ground based VOTs and the associated frequency shall be shown when available. VOTs are also shown with identifier, frequency and referenced remarks in the VOR Receiver Check section in the back of this publication.

**31 RADIO AIDS TO NAVIGATION**

The Airport/Facility Directory section of the Chart Supplement lists, by facility name, all Radio Aids to Navigation that appear on FAA, Aeronautical Information Services Visual or IFR Aeronautical Charts and those upon which the FAA has approved an Instrument Approach Procedure, with exception of selected TACANS. All VOR, VORTAC, TACAN and ILS equipment in the National Airspace System has an automatic monitoring and shutdown feature in the event of malfunction. Unmonitored, as used in this publication, for any navigational aid, means that monitoring personnel cannot observe the malfunction or shutdown signal. The NAVAID NOTAM file identifier will be shown as “NOTAM FILE IAD” and will be listed on the Radio Aids to Navigation line. When two or more NAVAIDS are listed and the NOTAM file identifier is different from that shown on the Radio Aids to Navigation line, it will be shown with the NAVAID listing. NOTAM file identifiers for ILSs and its components (e.g., NDB (LOM) are the same as the associated airports and are not repeated. Automated Surface Observing System (ASOS) and Automated Weather Observing System (AWOS) will be shown when this service is broadcast over selected NAVAIDS.

## AIRPORT/FACILITY DIRECTORY LEGEND

### ILS FACILITY PERFORMANCE CLASSIFICATION CODES

Codes define the ability of an ILS to support autoland operations. The two portions of the code represent Official Category and farthest point along a Category I, II, or III approach that the Localizer meets Category III structure tolerances.

Official Category: I, II, or III; the lowest minima on published or unpublished procedures supported by the ILS.

Farthest point of satisfactory Category III Localizer performance for Category I, II, or III approaches: A – 4 NM prior to runway threshold, B – 3500 ft prior to runway threshold, C – glide angle dependent but generally 750–1000 ft prior to threshold, T – runway threshold, D – 3000 ft after runway threshold, and E – 2000 ft prior to stop end of runway.

ILS information is tabulated as indicated in the following sample:

ILS/DME    108.5    I-ORL    Chan 22    Rwy 18.    Class IIE.    LOM HERNY NDB.

ILS Facility Performance  
Classification Code

**COMM/NAV/WEATHER REMARKS:** Inbound aircraft should expect descent and approach clearances from Oakland ARTCC through San Francisco ARINC. Wake Operations monitors 121.5 and 243.0. Inbound aircraft contact Wake Operations 100 NM out for airport advisory service and advise servicing requirements. Make all departure reports to ARTCC via HF. No ATC available to overflights.

The purpose of this bulletin is to provide major changes in aeronautical information that have occurred since the last publication date of each Sectional Aeronautical, VFR Terminal Area, and Helicopter Route Chart listed. The general policy is to include only those changes to controlled airspace and special use airspace that present a hazardous condition or impose a restriction on the pilot, and major changes to airports and radio navigational facilities, thereby providing the VFR pilot with the essential data necessary to update and maintain chart currency. The data is grouped by type and then by effective date. When a new edition of the Aeronautical Chart is published, the corrective tabulation will be removed from this bulletin. Inasmuch as this Bulletin provides major changes only, pilots should consult the airport listing in this directory for all new information. Users of Caribbean Charts and U.S. Gulf Coast VFR Aeronautical Charts should consult the appropriate Sectional and VFR Terminal Area Charts for revisions. Positions are shown as degrees, minutes, seconds and hemisphere. Data is current as of 34 days prior to the date of this publication.

Military Training Routes (MTRs) are shown on Sectional Aeronautical Charts, VFR Terminal Area, and Helicopter Route Charts. Only the route centerline, direction of flight and the route designator are shown — route widths and altitudes are not shown. Since these routes are subject to change every 56 days and the charts are reissued generally every 6 months, routes with a change in the alignment of the charted route centerline will be listed in this Aeronautical Chart Bulletin below. Pilots are advised to go to the Special Use Airspace website ([www.sua.faa.gov](http://www.sua.faa.gov)) or contact Flight Service to obtain information on MTRs affecting their flight.

**HONOLULU (DANIEL K INOUE INTL) AIRPORT  
TOWER DATA LINK SYSTEM**

Tower Data Link System (TDLS) operational, Pre-departure Clearance (PDC) available at Honolulu (Daniel K Inouye Intl) Airport. To participate, e-mail 9-AWA-ATS-PDC@faa.gov or contact Gary Norek at FAA, Airspace and Procedures, ATO-T, 800 Independence Ave., SW, Washington, DC, 20591, telephone (202) 385-8510.

---

**HONOLULU (DANIEL K INOUE INTL) AIRPORT  
HNL RUNWAY INCURSION AND WRONG SURFACE LANDING RISKS**

**Runways 04-22 Runway Incursion Risk:** The runway holding position markings (hold lines) between Runway 04L-22R and Runway 04R-22L are relocated, with minimal space of approximately 20 feet between them. Pilots are reminded to hold short of the parallel runway until a clearance is received to cross that runway. ATC is aware that the aircraft tail may not be clear of the exiting runway and is restricting arriving and departing aircraft on that runway.

For additional information, enter this link into your web browser to view a short video on FAA's You Tube Channel: <https://youtu.be/OzwZvJPcGIs>.

**Wrong Surface Landing Risk:** Rwy 04R/Rwy 04L thresholds. Pilot expectation bias or runway confusion cause a potential for wrong runway landings. Pilots are reminded to acknowledge landing runway assignment and visually confirm lined up for the correct runway.

For additional information contact Honolulu Control Facility (HCF) at 808-840-6100.

---

**LASER LIGHT OPERATION****Keck Observatory, Gemini Observatory and Subaru Observatory**

A permanent laser light operation is being conducted nightly between sunset and sunrise at Keck Observatory and Gemini Observatory N19-49-26/W155-28-09, Kamuela VOR (MUE) 122 degree radial at 16 nautical miles. The laser beam may be injurious to eyes if viewed on axis. Cockpit illumination and flash blindness may also occur if the beam enters the cockpit. Honolulu Control Facility, (808) 840-6201 is the FAA coordination facility.

**Maui Space Surveillance Complex**

A permanent laser light operation is being conducted nightly between sunset and sunrise at the Maui Space Surveillance Complex (MSSC) N204231/W1561528, Maui VOR (OGG) 131 degree radial at 15 nautical miles. The laser beam may be injurious to eyes if viewed on axis. Cockpit illumination and flash blindness may also occur if the beam enters the cockpit. Honolulu Control Facility, (808) 840-6201 is the FAA coordination facility.

---

---

**CHANGE NOTICE**

A Change Notice will only be issued for safety considerations such as when an amended or original instrument approach procedure is issued.

---

**VMC FLIGHT (VFR)**

1. The Oakland OCA/FIR, unless otherwise specified, is classified as class A airspace above FL055 (IFR only). VMC flights are not authorized in class A airspace but may operate within the Oakland Oceanic FIR as follows:
  - a. At or below FL055 (class G).
  - b. In class D and E airspace.
  - c. In the airspace surrounding Pacific islands located within the Oakland OCA/FIR with the following restrictions:
    - (1) Between sunrise and sunset; and
    - (2) When operating less than 100 NM of shoreline of any landmass; and
    - (3) Below FL200:

NOTE: VMC Flights operating within 100 NM of landfall are not considered to be "over water" flights.

2. All "over water" VMC flights planning to operate outside of controlled airspace (class G) but on routes within the Oakland Oceanic FIR are required for national security to file an ICAO flight plan.
  - a. The flight plan shall contain reporting points along the route not more than 80 minutes apart.
  - b. It is the VMC pilots' responsibility to open and close their VMC flight plan with Oakland ARTCC.
3. All over water VMC flights are required to maintain a continuous listening watch on the appropriate frequency, and make position reports at all filed reporting points on the appropriate HF frequencies.

NOTE: Satphones do not meet the "continuous listening watch" requirements as prescribed by ICAO.

4. Flight following and alerting services are provided by ATC for all over water flights.
5. State owned aircraft (military, customs etc.) may operate VFR within the Oakland Oceanic FIR if exercising "Due regard."

---

**LATERAL AND VERTICAL LIMITS OF OCEANIC CONTROL AREAS**

1. The Oakland OCA is aligned laterally to coincide with the Oakland Oceanic FIR, except for that portion of Fukuoka OCA that has been delegated to Oakland ARTCC for provision of air traffic control services as defined below:
  - a. Within the area bounded by 21°N/151°E, 21°N/155°E, 23°31'39"N/155°E.
  - b. Within the area bounded by 27°N/161°04'50"E, 27°N/165°E, 29°N/165°E.
2. A portion of Oakland OCA has been delegated to Fukuoka ATMC for provision of air traffic control services within the area bounded by 23°31'39"N/155°E, 27°N/155°E, 27°N/161°04'50"E.
3. The Oakland OCA has a lower limit of FL055, except where Class D or E airspace is designated; there is no upper limit.

---

**ADDRESSING FLIGHT PLANS WITH OAKLAND OCEANIC**

All aircraft entering Oakland OCA/FIR (KZAK) must address the ICAO flight plans to KZAKZQX and KSFOXAAX.

---

**OCEANIC IFR SEPARATION STANDARDS**

1. **LONGITUDINAL:** At least 10 minutes between turbojet aircraft on the same or continuously diverging course. Non-turbojet aircraft, at least 15 minutes. Between two RNP-10 aircraft with ADS-C connections, 50 nautical miles and between two RNP-4 aircraft with ADS-C connections, 30 nautical miles.
  2. **CROSSING:** All aircraft at least 15 minutes.
  3. **LATERAL:** At least 100 nautical miles between intended routes, 50 nautical miles between aircraft certified RNP-10 and 30 nautical miles between aircraft certified RNP-4. Lateral separation minima may be reduced in some cases when suitable NAVAIDS are available.
  4. **VERTICAL:** Oakland OCA is classified as Reduced Vertical Separation Minimum (RVSM) airspace. Vertical separation standards are therefore at least 1,000 feet from the lower limit to flight level 410. Above flight level 410 at least 2,000 feet.
-

**LOWER SEPARATION MINIMA – OAKLAND OCEANIC FIR**

In accordance with ICAO Regional Supplementary Procedures – DOC 7030 PAC/RAC-1 6.4, notice is hereby given that separation lower than those specified in 6.1 and 6.2 may be applied in accordance with PANS-RAC DOC 4444-RAC 501 Part 111, sections 7, 8 and 9 within the Oakland Oceanic FIR/OCA. The use of lower separation standards within the airspace listed below is contingent upon satisfactory and current flight check data of the navigational aids.

AIRSPACE	NAVIGATIONAL AIDS
100 NM seaward of the boundary of the Honolulu Domestic area	SOK, LIH, HNL, MKK, LNY, OGG, ITO, UPP and KOA VORTACS
50 NM of Guam	AJA NDB
130 NM of Wake Island	AWK VORTAC FL180-450
40 NM of Wake Island	AWK VORTAC SFC-FL180
130 NM of Midway Island	NQM TACAN FL180-450
40 NM of Midway Island	NQM TACAN SFC-FL180
50 NM of Majuro Island	MAJ NDB/DME
50 NM of Kwajalein Island	NDJ NDB
50 NM of Weno Island/Chuuk	TKK NDB/DME
50 NM of Yap Island	YP NDB/DME
50 NM of Ponape Island	PNI NDB/DME
50 NM of Saipan Island	SN NDB
50 NM of Babelthup Island/Koror	ROR NDB/DME

**MACH NUMBER TECHNIQUE**

1. The minimum longitudinal separation between aircraft may be reduced with the application of Mach Number Technique (MNT) thereby improving airspace utilization.

**2. APPLICATION**

- a. MNT may be used only between turbojet aircraft following the same or continuously diverging track, which have reported over a common point.
- b. MNT can only be applied between aircraft that are assigned a single cardinal altitude or the aircraft concerned are in level, climbing or descending flight.
- c. Longitudinal separation between aircraft using MNT is based on the aircraft maintaining the assigned Mach number at all times, including during climb and descent. If it is not feasible, for operational reasons, to maintain the last assigned Mach number, the pilot shall advise ATC at the time of the initial clearance or subsequent climb/descent request or clearance.
- d. Aircraft shall adhere to the Mach number assigned by ATC and shall obtain approval before making any change to the Mach number. If it is essential to make an immediate change in Mach number (i.e. due to turbulence) ATC shall be notified as soon as possible that such a change has been made.
- e. MNT SEPARATION MINIMA. When the lead aircraft maintains the same Mach number of the following aircraft the minima when using MNT is 10 minutes.

**f. REDUCTIONS TO SEPARATION WHEN APPLYING MNT.**

- (1) To apply reductions, it must be possible to ensure that the required time interval will exist at the common point from which the aircraft either follow the same track or continuously diverging tracks.
- (2) Both turbojet aircraft will be assigned an appropriate Mach number. The lead aircraft will be assigned a Mach number greater than the following aircraft. Separation minima are as follows:

Difference in Mach number between aircraft	Minimum separation between aircraft
0.02 Mach	9 Minutes
0.03 Mach	8 Minutes
0.04 Mach	7 Minutes
0.05 Mach	6 Minutes
0.06 Mach	5 Minutes

- g. MNT WITH FASTER AIRCRAFT BEHIND. Mach Number Technique may be applied when faster aircraft will follow another aircraft at the same flight level. In this case, longitudinal separation may be established during transition from offshore airspace to the OCA, or when both aircraft are within oceanic airspace. Sufficient longitudinal separation will be applied to ensure at least 10 minutes separation until another form of separation is achieved.

---

### NAVIGATIONAL PERFORMANCE IN OCEANIC AREAS

1. In any air traffic control environment there is a need to ensure that the aircraft adhere to the centerline of the cleared route or 1 or 2 NM right of course with Strategic Lateral Offset Procedure (SLOP). Demonstrated navigational accuracy provides the basis for determining lateral spacing and separation minima necessary with respect to traffic, which may be operating outside, but adjacent to the airspace protected for a given route. To sustain or refine the separation minima, adherence to cleared route must be demonstrated. The best available measurement of such adherence is obtained by radar observation of each aircraft's proximity to centerline prior to its coming into coverage of short range navigation aids at the end of the oceanic navigated portion of flight. If observation indicates that an aircraft was not reasonably within airspace normally protected, the reasons for the apparent deviation from centerline must be determined and steps must be taken to prevent recurrence and to improve overall navigational performance.
2. Oceanic airspace is monitored for navigational errors. Errors of the following magnitude will be reported in an Oceanic Error Report:
  - a. Gross Navigation Errors (GNE)—25 NM laterally;
  - b. Height errors—300 feet or more from cleared altitude;
  - c. Time (longitudinal) errors— Actual Time of Arrival is more than 3 minutes different than the Estimated Time of Arrival.

NOTE: The crew will be queried about the observed error and advised that an Oceanic Error Report is being filed. The reports will be investigated to determine causal factors and the data is used for Statistical Analysis and trends. Pilots should understand that these reports are instrumental in providing data for detecting significant changes in the navigational environment, which may require corrective action.

3. Pilots of aircraft entering Oakland Oceanic FIR are required to advise controllers of any changes to the navigational capabilities of their aircraft from those filed in the original flight plan prior to entering oceanic airspace.

---

### BASIC OCEANIC LONG-RANGE NAVIGATION AND COMMUNICATION REQUIREMENTS

1. Any operation, which is conducted in international airspace on an IFR flight plan, a VFR controlled flight plan, or at night, and is conducted beyond the published range of normal airways navigation facilities (NDB, VOR, DME), is considered to be a long range navigation operation. Long range navigation in controlled airspace (OCA) requires aircraft to be navigated within the degree of accuracy required for air traffic control, meaning that aircraft must make every effort to follow the centerline of the assigned route or 1 or 2 NM right of course with Strategic Lateral Offset Procedure (SLOP), to maintain assigned flight level and speed filed or assigned. Accurate navigational performance is necessary to support the separation minima applied by ATC. These separation minima can be found in the International Civil Aviation Organization (ICAO) Regional Supplemental Procedures Document 7030. For flights conducted in international airspace under United States jurisdiction, Order JO 7110.65, Air Traffic Control Handbook, Chapter 8, Offshore/Oceanic Procedures provides a simplified version of these separation minima.
2. Federal Aviation Regulation (FAR) 91.703 requires that civil aircraft must comply with ICAO Annex 2 when operating over the high seas. Annex 2 requires that "Aircraft shall be equipped with suitable instruments and with navigation equipment appropriate to the route being flown." ICAO Annex 6, Part II stipulates that an airplane operated in international airspace must be provided with navigation equipment, which will enable it to proceed in accordance with the flight plan and in accordance with the requirements of air traffic services. This means that navigation equipment should be capable of providing the pilot with ability to navigate the aircraft with required accuracy.
3. Annex 2 also requires that an aircraft shall adhere to the "current flight plan unless a request for change has been made and clearance obtained from the appropriate air traffic control facility" and "unless otherwise authorized or direct by the appropriate air traffic control unit, controlled flights shall, insofar as practicable: a) when on an established ATS route, operate along the centerline of that route; or b) when on any other route, operate directly between the navigation facilities and/or points defining that route."

NOTE: Aircrews may utilize SLOP procedures and offset 1 or 2 NM right of course.

4. If a flight inadvertently deviates from an ATC cleared route immediate action should be taken to rejoin the track as soon as possible. When a deviation from track is discovered air traffic control must be informed so that appropriate actions may be taken to resolve any potential hazards to other aircraft, which may have been created by the deviation. Any navigation error which results in an aircraft straying from its cleared route and beyond its protected airspace could create a significant hazard, since the error may not normally be observed by air traffic control.
5. ICAO Annex 6, Part II contains standards and recommended practices adopted as the minimum standards for all general aviation airplanes engaged in international air navigation. It requires that airplanes operated in accordance with Instrument Flight Rules, at night, or on a VFR controlled flight, have installed and approved radio communication equipment capable of conducting two-way communication at any time during the flight with such aeronautical stations and on such frequencies as may be prescribed by the appropriate authority.

NOTE: Satellite telephones do not meet the two-way communication as stated in ICAO Annex 6 part II.

6. All of the aforementioned requirements contained in Annex 2 and Annex 6, as supplemented by Regional Supplementary Procedures Document 7030, are incorporated in section 91.1 and 91.703 of the FAR for aircraft operating under United States civil certification in international oceanic airspace.
-

---

## STRATEGIC LATERAL OFFSET PROCEDURE (SLOP) IN OCEANIC AIRSPACE TO MITIGATE WAKE TURBULENCE AND COLLISION RISK

1. Pilots should use the Strategic Lateral Offset Procedure (SLOP) as standard operating practice in the course of normal oceanic operations to mitigate wake turbulence and collision risk. SLOP should be applied while navigating any ATS route or published PACOTS track in oceanic airspace. Specifically, SLOP should be applied throughout the Oakland Oceanic FIR and in all portions of the Anchorage Arctic, Domestic and Oceanic FIRs (including Offshore Control Areas) which are more than twelve miles offshore. Additionally, SLOP may be used over the land area of the Alaska Peninsula west of 160° West longitude. SLOP is designed to protect from wake vortex encounters and to mitigate the heightened risk of collision created when non-normal events, such as operational or turbulence induced altitude deviations, occur.
2. SLOP is applied according to the following guidelines:
  - a. Lateral offsets are to be made to the **right** of a route or track;
  - b. In relation to a route or track, there are three positions that an aircraft may fly: centerline, 1 nautical mile (NM) or 2 NM **right**;
  - c. Offsets are not to exceed 2 NM **right** of centerline.
3. SLOP is intended to reduce risk (increase the safety margin) by distributing aircraft laterally and equally across the three available positions. Therefore, pilots must take account of the following:
  - a. Aircraft without automatic offset programming capability **must** fly the centerline;
  - b. Aircraft capable of being programmed with automatic offsets may fly the centerline or offset 1 NM or 2 NM right of centerline to obtain lateral spacing from nearby aircraft;
  - c. Pilots should use whatever means are available (e.g. communications, visual acquisition, GPWS or TCAS/ACAS) to determine the best path to fly;
  - d. Any aircraft overtaking another aircraft is to offset within the confines of this procedure, if capable, so as to create the least amount of wake turbulence for the aircraft being overtaken;
  - e. For wake turbulence purposes, pilots are also to fly one of the three positions prescribed at 3.b. above and never offset to the left of centerline nor offset more than 2 NM right of centerline;

**NOTE:** *It is recognized that the pilot will use his/her judgment to determine the action most appropriate to the situation and has final authority and responsibility for the safe operation of the aircraft. The air-to-air channel, 123.45, may be used to coordinate the best wake turbulence offset option.*

  - f. Pilots may apply an offset outbound at the oceanic entry point but must return to centerline at the oceanic exit point except as otherwise permitted in paragraph 1 above.
  - g. There is no ATC clearance required for this procedure nor is it necessary that ATC be advised;
  - h. Aircraft transiting radar-controlled airspace (e.g. Guam or Honolulu) may remain on their established offset positions - pilots are not required to inform the radar controller that a strategic lateral offset is being applied;
  - i. Voice position reports are to be based on the current ATC route/course clearance and not the coordinates of the offset position.

---

## USE OF VERY HIGH FREQUENCY (VHF) AND HIGH FREQUENCY (HF) FOR COMMUNICATIONS

Due to the inherent "line of sight" limitations of VHF radio equipment when used for communications in international oceanic airspace, those aircraft operating on an IFR or controlled VFR flight plan beyond the communications capability on the assigned VHF will be required as per ICAO Annex 2 to maintain a continuous listening watch and communications capability on the assigned HF frequencies. These frequencies are listed in Section IV of this Chart Supplement as part of the general-purpose communication facilities operated by Aeronautical Radio, Incorporated (ARINC). These facilities will be responsible for the relay of position reports and other pertinent information between the aircraft and Air Traffic Control.

NOTE: Use of satellite telephones does not provide "a continuous listening watch and therefore does not meet minimum ICAO requirements. However satellite telephones may be used as a backup to HF communications in the event an aircraft is unable to contact ARINC on HF. Satellite voice equipped aircraft may call ARINC at 925-371-3920 to transmit messages.

### DIRECT SATVOICE CAPABILITY

Oakland Center Oceanic has the capability for air/ground and ground/air satellite telephone service (SATVOICE). Direct SATVOICE contact between the pilot and the Front Line Manager at Oakland Center Oceanic shall be limited to distress and urgency situations or other exceptional circumstances only. Aircraft desiring to contact Oakland Center Oceanic should use the following INMARSAT security numbers:

INMARSAT number  
436697

Commercial Telephone Number  
510-745-3415 or 3416

---

**SPECIAL PACIFIC AREA COMMUNICATIONS**

Frequency 123.45 MHz has been designated for use in air-to-air communications between aircraft operating in the Pacific area out of range of VHF ground stations to exchange operational information and facilitate resolution of operational problems.

---

**GUARD OF VHF EMERGENCY FREQUENCY**

Pilots should remember that there is a need to continuously guard the VHF emergency frequency 121.5 MHz when on long over-water flights, except when communications on other VHF channels, equipment limitations, or cockpit duties prevent simultaneous guarding of two channels. Guarding of 121.5 MHz is particularly critical when operating in proximity to flight information region (FIR) boundaries since it serves to facilitate communications with regard to aircraft, which may experience in-flight emergencies, communications, or navigational difficulties.

---

**USE OF NONDIRECTIONAL BEACON (NDB) FOR NAVIGATION**

1. The use of NDB as the "primary" source of navigation for long-range oceanic flight presents the operator with numerous limitations and restrictions that are inherent in low frequency radio equipment and low frequencies signals. These include:
  2. NDB of the highest power (2000 watts or more), which are maintained and flight checked as suitable for navigation, are limited in their usable service and/or reception range to no more than 75 NM from the facility at any flight level.
  3. Though the operator may be able to receive standard (AM/amplitude modulation) broadcast stations with NDB equipment, primary dependence on the facilities for air navigation is a questionable operating practice. The following are some of the inherent problems associated with reception of these stations:
    - a. Infrequent identification of the station.
    - b. Identification of foreign language stations may be impossible without some knowledge of the language.
    - c. Transmitter sites are not always collocated with studio facilities.
    - d. Termination of service without notice.
    - e. Weather systems causing erratic and unreliable reception of signal.
    - f. Atmospheric disturbances causing erratic and unreliable reception of signal.
    - g. No flight checks conducted to verify the suitability and reliability of the facility and its signal for use in air navigation.
    - h. Fluctuation (bending) of signal due to "shoreline/mountain" effect.
    - i. Standard broadcast stations are not dedicated for air navigation purposes.
  4. Considering the limitations, the operator should make every effort to navigate the aircraft so as to maintain the "track/course" and the "tolerances" specified in the ATC clearance. An error of 10 degrees at a distance of 2000 miles equates to approximately 350 NM of course deviation; the inadequacies of the NDB as the sole source of navigation for oceanic flight must be evaluated carefully.
-

---

**AMERICAN SAMOA****PAGO PAGO INTERNATIONAL AIRPORT****PROCEDURES**

**Inbound.** About 30 miles from the airport, monitor 118.3 for broadcasts from other aircraft. At 15 miles from the airport broadcast your position, altitude and intentions. Follow this with your position on downwind, base leg and final approach.

**Outbound.** Monitor 118.3 for broadcasts from other aircraft before taxiing. Broadcast your position on the airport and intentions. Follow this with an announcement before you taxi onto the runway for takeoff.

**HAZARDS, CAUTIONS AND WARNINGS**

**AMERICAN SAMOA – POWER LINES:** Permanently installed power lines between island of Ofu and Olosega 400 feet ASL unlighted and unmarked.

---

**HONOLULU CTA/HAWAII****GENERAL INFORMATION ON FLYING TO HAWAII**

(Entry and Departure Requirements)

Air Commerce Regulations of the United States, Part 6, place certain responsibilities upon owners and operators of aircraft engaging in flights to and from foreign countries.

Customs and other agencies concerned desire to facilitate air travel to the fullest extent possible while carrying out their responsibilities. Aircraft operators can assist by familiarizing themselves with the regulations and by complying with them under all circumstances. Failure to do so may incur substantial penalties.

The following sets forth the principal requirements of concern to private plane operators engaging in international flights.

**ARRIVAL AND DEPARTURE MANIFESTS.** All aircraft departing from the continental United States or Alaska or Hawaii are exempt from filing an arrival or departure manifest. Aircraft arriving from any other place are required to file arrival and departure manifests.

**ADVANCE NOTICE REQUIRED.** Advance notice of each arrival must be furnished to U.S. Customs officials at or nearest to the place of intended first landing who will notify the Immigration and Public Health officials.

Advance notice should be sent so as to be received in sufficient time to enable the officers designated to inspect the aircraft to reach the place of landing before the arrival of the aircraft. At most airports, at least 2 hours advance notice is required for this purpose.

Notification may be made by telephone, which is preferable, or by telegram or radio. The notice should specify the following: (a) Type of aircraft; (b) Identification number (NC number); (c) Name of pilot; (d) Place of last departure; (e) Airport of entry; (f) Number of alien and citizen passengers; and (g) Estimated time of arrival (Indicating whether H.S.T., P.S.T., etc.).

All aircraft entering the United States from a foreign area must give advance notice of arrival IAW 19 CFR 122.23 and 122.31. Notice must be given to the port director at the place of first landing, either directly by radio, telephone, or other method; or through FAA flight notification procedure (see International Flight Information Manual, Federal Aviation Administration). When reliable means for giving notice are not available (for example, when departure is from a remote place) a departure must be made at a place where notice can be sent prior to coming into the U.S. Notice of arrival must be furnished far enough in advance to allow inspecting U.S. Customs and Border Protection (CBP) officers to reach the place of first landing of the aircraft prior to the aircraft's arrival. When advance notice is received, the port director will inform any other concerned Federal agency.

**AIRPORTS FOR ENTRY OR REENTRY.** If the operator of a private aircraft returning to or visiting the United States wishes to land at any airport of entry, advance notice of arrival is necessary. This advance notice should be sent also to the immigration and public health officers at or nearest the intended place of first landing.

If he intends to land at a place not designated as an airport of entry, he must obtain permission to make such landing and give advance notice of arrival to the customs office nearest the intended place of first landing. It is not necessary that separate requests be sent to immigration and public health officers in these cases.

**WHAT TO REPORT.** The advance notice should specify the type of aircraft, registration marks, name of commander, place of last departure, international airport, number of alien passengers, number of citizen passengers, and the estimated time of arrival. This advance notice should be sent in time to enable officers, designated to inspect the aircraft, to reach the place of landing before the aircraft arrives.

Upon arrival, the operator and passengers will be examined in the same manner as any international traveler. They must declare any articles acquired abroad. If any passengers or cargo are carried, an inward manifest must be filed. Customs officers can supply forms for both types of declaration, although operators should have their own supply.

**IN CASE OF EMERGENCY.** If an emergency landing is made in the United States, the aircraft operator should report as promptly as possible to the nearest customs, immigration and public health officers. The aircraft operator should not permit any merchandise or baggage to be removed, or any passengers to depart, without official permission unless necessary for preservation of life or property.

**THE MATTER OF CHARGES.** No charges are made for services during business hours when a landing takes place at any airport of entry; except that, when an aircraft arrives on a Sunday or holiday, or during other than regular hours, OVERTIME PAY WILL BE COLLECTIBLE. These charges are required by law. They may amount to as much as two days pay for each officer for any service performed on a Sunday or holiday. However, the charges are prorated where more than one aircraft is processed.

If the landing is made at a place other than an airport of entry, any expenses incurred by Government officers in going to and from the place of landing are payable by the plane operator. In addition, if the aircraft arrives on a Sunday or holiday, or during other than regular hours, OVERTIME PAY WILL BE COLLECTIBLE.

**UNITED STATES LANDING RIGHTS AIRPORTS.** At the following airports an application for permission to land must be submitted in advance to U.S. Customs. At least two hours advance notice of arrival must also be furnished to U.S. Customs. Advance notice of arrival may be included in your flight plan filed in Canada or Mexico if destined to an airport where flight notification service is available; this notice will be treated as an application for permission to land.

#### HAWAII

Lihue/Lihue Airport  
Hilo/Hilo Intl  
Honolulu/Daniel K Inouye Intl  
Kahului/Kahului Airport

NOTE: All aircraft entering U.S. airspace from a foreign port or departing U.S. airspace for a foreign port must provide at least 1 hour advance notice to the U.S. Customs and Border Protection (CBP) via the Electronic APIS (eAPIS) at <https://eapis.cbp.dhs.gov/>, telephone, radio, or other means, or through the FAA. Requests for permission to land at a Hawaiian landing rights airport should be directed to 808-861-8462 ext 0.

### STRATEGIC LATERAL OFFSET PROCEDURE (SLOP) IN HONOLULU CONTROL FACILITY AIRSPACE TO MITIGATE WAKE TURBULENCE AND TO MITIGATE COLLISION RISK

- Aircraft are encouraged to use the Strategic Lateral Offset Procedure (SLOP) published in the USA AIP (Aeronautical Information Publication) within the Honolulu CF CTA (Honolulu Control Facility Control Area).
- In addition to the airspace authorized for SLOP in the USA AIP, flights may use SLOP in the USA AIP, flights may use SLOP while on ATS routes in the Honolulu CF CTA.
  - Departing oceanic flights may apply SLOP within the Honolulu CF CTA upon reaching initial cruise flight level and within 70 NM from oceanic entry point.
  - Oceanic flights arriving Hawaii should terminate SLOP no later than 70 NM after oceanic exit point or when receiving radar vectors whichever occurs first.
  - Oceanic overflights should remain on SLOP offset throughout the Honolulu CTA.
- Hawaiian inter-island flights must not use SLOP.

### RADAR SERVICE – HONOLULU DOMESTIC AREA

In an effort to eliminate the mid-air collision potential in the Honolulu Domestic area, civil aircraft are encouraged to take one of the following two courses of action: (1) File an IFR flight plan, if the pilot is qualified and aircraft properly equipped; (2) Take advantage of the VFR radar advisory service provided by Honolulu Control Facility, by contacting Honolulu Control Facility on 119.3 MHz for aircraft SE of Oahu, 126.5 MHz when W of Oahu, or on 124.1 MHz when NE of Oahu. Aircraft desiring this service should request VFR radar advisory service and give aircraft identification, type, altitude, position with reference to the nearest navaid or geographical location, heading and destination. If controller workload permits, radar traffic advisories will be issued after radar identification is accomplished by aircraft position correlation, or aircraft identifying turns. This is in addition to the radar services provided by Maui and Honolulu Approach Controls for aircraft in their respective areas.

### RADAR SERVICE – KONA DOMESTIC AREA

Primary radar service unavailable below 5000 feet MSL east of Haleakala and south of Maunakea. In the area as described, radar services are available only to transponder equipped aircraft.

### GLIDE SLOPE SIGNALS ON LOCALIZER BACK COURSE

Localizer Back Course instrument approach procedures do not utilize glide path information. In most back course areas, however, extraneous glide slope signals emanating from the front course site can be detected—THESE GLIDE SLOPE SIGNALS SHOULD BE DISREGARDED WHEN CONDUCTING LOCALIZER BACK COURSE APPROACHES.

The FAA has conducted an airborne survey to determine the level of extraneous glide slope signal at each location. Where a significant level of “fly down” glide slope signal is present, the approach chart will be annotated as an additional alert to the pilot.

### BEACON REQUIREMENTS

Aircraft departing the Honolulu CTA and entering the Oakland FIR should remain on their last assigned discrete beacon code until passing the first compulsory reporting point after crossing the KZAK FIR boundary, thence adjust transponder to display code 2000 until otherwise directed by air traffic control.

### HIGH FREQUENCY (HF) RADIO FREQUENCY ASSIGNMENT

Aircraft departing airports in Hawaii and entering the Oakland FIR should contact San Francisco Radio on 131.95 for HF frequency assignment prior to departure. If unable to contact San Francisco Radio prior to departure, then within ten (10) minutes of departure.

**VFR FLIGHT WITHIN HAWAII**

NOTE: CAUTION – HIGH DENSITY COMMUTER AND SIGHTSEEING TRAFFIC

VFR Cruising altitude at or below 3,000 feet AGL

In order to reduce traffic conflict between interisland flights at or below 3,000 feet, an informal cruising altitude program is in use in the Hawaiian islands. Recommended eastbound altitudes: 2500, 1500, 500 feet; recommended westbound altitudes: 3000, 2000, 1000 feet.

**SPECIAL ALERTNESS RECOMMENDED:** Pilots engaged in sightseeing Hawaii must be sure their attention is not diverted from their primary responsibility for the safe operation of their aircraft. There is extensive VFR traffic operating along shorelines of all islands. Aircraft range in size from Cessna 152 to DeHavilland DHC-7 (4-engine). These aircraft generally operate from the shoreline to three miles offshore, at altitudes below 4500 feet.

Pilots should be aware of the high density traffic areas listed below.

**NORTH SHORE MOLOKAI-MAUI**

The route from Koko Head (CKH) VORTAC to and along the north shore of Molokai and Maui is extremely heavily traveled by aircraft engaged in commuter and sightseeing operations. As many as seven aircraft may be operating along Molokai north shore in both east and west bound directions, simultaneously and on a routine basis. The number may be up to 15 aircraft during peak traffic periods. VFR CHECKPOINTS: ILIO POINT, KALAUPAPA, and CAPE HALAWA on Molokai; NAKALELE POINT on Maui.

The following precautions are recommended:

–Maintain an especially alert watch for other aircraft. Traffic becomes concentrated in the vicinity of Ilio Point, Kalaupapa (airport), Cape Halawa, and Nakalele Point. Altitude changes should be avoided in these areas.

–Maintain an alert listening watch on 122.9 MHz and announce aircraft position, direction of flight and altitude when passing the VFR checkpoints named above.

EXAMPLE: ROYAL 76, ILIO POINT EASTBOUND 1500  
TANGO 34, CAPE HALAWA WESTBOUND 2000

–Landing aircraft–Molokai Airport: Before crossing within one mile of the shoreline, or before passing abeam the VFR checkpoints noted above, arriving aircraft should broadcast position, altitude and intentions on 122.9 MHz prior to contacting Molokai Tower.

EXAMPLE: ROYAL 76 THREE WEST ILIO POINT, 1500, LANDING MOLOKAI

–Landing aircraft–Kalaupapa Airport: Aircraft landing at Kalaupapa Airport should comply with transiting procedures and, when approximately five miles from the airport, broadcast position, altitude and intentions on 122.9 MHz (remaining clear of the Molokai Airport Traffic Area). Follow this up with appropriate announcements on downwind, base leg and final approach. When departing Molokai for Kalaupapa, request frequency change to 122.9 MHz after departure, in order to make these broadcasts.

Flights Through Kalaeloa Class D–Aircraft at or above 2000', contact HCF APP on 119.1/239.05 if north of Kalaeloa Airport, 118.3/269.0 if south of the airport. Aircraft below 2000', contact Kalaeloa Tower for instructions.

**HONOLULU CLASS B AIRSPACE**OPERATING RULES AND PILOT/EQUIPMENT REQUIREMENTS

Regardless of weather conditions, an ATC authorization is required prior to operating within Class B airspace. Pilots should not request an authorization to operate within CLASS B unless the requirements of sections 91.215 and 91.131 of the FAR are met. Included among these requirements are:

- (1) Unless otherwise authorized by ATC, the aircraft must be equipped with an operable two-way radio capable of communicating with ATC on appropriate frequencies for that terminal control area.
- (2) No person may takeoff or land a civil aircraft at an airport within CLASS B or operate within CLASS B unless:
  - (a) The pilot in command holds at least a private pilot certificate; or
  - (b) The aircraft is operated by a student pilot who has met the requirements of FAR section 61.95.
- (3) Unless otherwise authorized by ATC, each person operating a large turbine engine-powered airplane to or from a primary airport shall operate at or above the designated floors while within the lateral limits of CLASS B.
- (4) Unless otherwise authorized by ATC, the aircraft must be equipped with an operable VOR or TACAN receiver.
- (5) Unless otherwise authorized by ATC, the aircraft must be equipped with a 4096 code transponder with automatic altitude reporting equipment.

NOTE. ATC may, upon notification, immediately authorize a deviation from the altitude reporting requirement; however, a request for a deviation from the 4096 code transponder equipment requirement must be submitted to the controlling ATC facility at least one hour before the proposed operation.

**FLIGHT PROCEDURES****A. IFR Flights**

Aircraft operating within the Honolulu CLASS B airspace must be operated in accordance with ATC clearances and instructions.

**B. VFR Flights**

1. Arriving aircraft, or aircraft desiring to transit CLASS B should contact Honolulu Control Facility on the frequency depicted for the sector of flight with reference to the geographical center of the airport. Pilots should state, on initial contact, their position, direction of flight and destination. If holding of VFR aircraft is required, the holding point will be specified by ATC and will be a prominent geographical fix, landmark or VOR radial.
2. Aircraft departing the primary airports are requested to advise the Honolulu clearance delivery position prior to taxiing of the intended route of flight and altitude. Aircraft departing from other than the primary airports should give this information on appropriate ATC frequencies or as directed by ATIS information if the route penetrates CLASS B.
3. Aircraft desiring to transit CLASS B will obtain clearance on an equitable "first-come, first-served" basis, providing the requirements of FAR 91 are met.

ATC PROCEDURES

All aircraft will be controlled and separated while operating with CLASS B, except helicopters may not be separated from other helicopters. Although radar separation will be the primary standard used, approved visual and other nonradar procedures will be applied as required or deemed appropriate. Traffic information on observed targets will be provided on a workload permitting basis to aircraft operating outside of CLASS B.

NOTE: Assignments of radar headings and/or altitudes are based on the provision that a pilot operating in accordance with visual flight rules is expected to advise ATC if compliance with an assigned route, radar heading or altitude will cause the pilot to violate such rules.

**CLASS D/CLASS E AIRSPACE**

Elimination of Special VFR (FAR 91.157) Operations within Certain CLASS D/CLASS E airspace (FAR 93.113)

Special VFR flight operations by fixed-wing aircraft have been suspended within Honolulu CLASS D/CLASS E airspace which contains the following airports:

Honolulu (Daniel K Inouye Intl) Airport

At all other CLASS D/CLASS E airspace, Special VFR operations will be permitted only if IFR operations are not delayed.

Requests for relief from the special VFR prohibition will be considered for certain frequently recurring flight operations, including agricultural, industrial, and flights conducted by IFR-rated pilots in IFR equipped aircraft.

The ruling affects only Special VFR operations. VFR operations may continue to be conducted.

**TRAFFIC ADVISORIES AT NON-TOWER AIRPORTS**

The following procedures are supplemental to those described in the FAA Aeronautical Information Manual (AIM).

**1. AT A NON-UNICOM AIRPORT**

- a. When inbound, tune to 122.9 MHz about 15 miles from the airport (if IFR, when the controller advises: "CHANGE TO ADVISORY FREQUENCY APPROVED") and listen for broadcasts from any other aircraft. Then, about 5 miles from the airport broadcast your position, altitude, and intentions. Follow this up with appropriate announcements of your position on downwind, base and final approach.
- b. When outbound, tune to 122.9 MHz before taxiing and listen for broadcasts from any other aircraft. Then broadcast your position on the airport and intentions. Follow this up with an announcement before you taxi onto the runway for takeoff.

**2. AT AN AIRPORT LISTED AS HAVING UNICOM**

- a. When inbound, tune to 122.8 MHz about 15 miles from the airport (if IFR, when the controller advises: "CHANGE TO ADVISORY FREQUENCY APPROVED") and listen for any other aircraft communicating with the UNICOM operator. Then, about 5 miles from the airport, inform the UNICOM operator of your position, altitude and intentions.
- b. When outbound, contact the UNICOM operator on 122.8 MHz before taxiing and furnish your position on the airport and intentions.
- c. In both cases, the UNICOM operator will provide runway, wind, and at his discretion, traffic information.

**3. PART TIME TOWER (WHEN CLOSED)**

- a. When inbound at about 15 miles from the airport (if IFR, when the controller advises: "CHANGE TO ADVISORY FREQUENCY APPROVED") tune to and listen for broadcasts from other aircraft on the appropriate frequency listed below. Then, about 5 miles from the airport, broadcast your position, altitude and intentions. Follow this up with appropriate announcements of your position on downwind, base and final approach.
  1. Hilo Intl – 118.1 MHz
  2. Kahului Airport – 118.7 MHz
  3. Keahole Airport – 120.3 MHz
  4. Lihue Airport – 118.9 MHz
  5. Molokai Airport – 125.7 MHz
- b. When outbound, tune to the appropriate frequency before taxiing and listen for broadcasts from any other aircraft. Then broadcast your position on the airport and intentions. Follow with an announcement before you taxi onto the runway for takeoff.

**HONOLULU TERMINAL AREA – VFR CLASS B DEPARTURE ROUTES****RESPONSIBILITIES**

VFR CLASS B DEPARTURE ROUTES WILL BE ISSUED ONLY UPON REQUEST. Detailed departure instructions will be furnished to others. All procedures and altitudes described in this letter are subject to weather and traffic conditions. Pilots are not relieved of their responsibilities to see and avoid other traffic, to maintain appropriate terrain and obstruction clearance, and to remain in weather conditions equal to or better than the minima required by FAR 91.155. When compliance with an assigned route, heading, or altitude is likely to compromise pilot responsibility with respect to terrain, obstruction clearance, and/or weather minima, approach control should be so advised.

**DEPARTURE PROCEDURES**

Before taxiing, pilots shall contact clearance delivery on 121.4/281.4 and state the current ATIS information code and requested departure procedure. Clearance delivery will issue the departure route clearance and assign transponder code. Unless otherwise directed by ATC, pilots shall depart CLASS B via the cleared route.

Example: Pilot – N86DD SHORELINE FOUR DEPARTURE WITH INFORMATION QUEBEC.

ATC – N86DD IS CLEARED OUT OF CLASS B VIA SHORELINE FOUR DEPARTURE SQUAWK 0271.

NOTE: Large acft expect clearance via radar vectors, initial heading 140°/200°

**Runway 04/O8L Procedures****Shoreline Six Departure**

Departing Runway 04L/04R maintain runway heading to the H-1 Freeway. Departing Runway 08L maintain runway heading to Nimitz Highway. Turn right, parallel Nimitz Highway proceeding direct to the center of Honolulu Harbor. Fly

within ½ mile offshore passing abeam Kewalo Basin then within ½ mile of the shoreline until south of Diamond Head. Turn left and resume own navigation remaining within 2 miles of the shoreline until departing Class B. Fixed wing aircraft maintain 1500 feet. Helicopters maintain at or below 500 feet. Departure Control frequency will be 124.8/317.6. Procedure intended for twin engine aircraft and helicopters. Not available between 0900 and 1500 for fixed wing aircraft.

**Freeway Two Departure**

Depart Runway 04L or Runway 04R on runway heading to Moanalua Freeway (State Highway 78/Interstate Highway H201), or depart runway 08L and turn left to fly parallel to runway 04L to Moanalua Freeway. Then turn RIGHT to follow Moanalua Freeway eastbound to H-1 Freeway and Kalanianaʻole Highway until passing abeam Koko Head. Maintain 1500 feet while in CLASS B. Departure Control frequency will be 124.8/317.6. Procedure restricted to helicopters and small propeller-driven aircraft only. Helicopters maintain at or below 1000 feet.

**Redhill Two Departure**

Depart Runway 04L/04R on runway heading to Moanalua Freeway (State Highway 78/Interstate Highway H-201) or depart Runway 08L and turn left to parallel Runway 04L to Moanalua Freeway. Then turn left and follow Moanalua Freeway northwest bound until departing Class B. Maintain 1500 feet while in Class B. Departure control frequency will be 119.1/239.05. Procedure restricted to helicopters and small propeller driven aircraft. Helicopters maintain at or below 1000 feet. CAUTION: VFR traffic proceeding inbound from the H-1/H-2 Interchange descending out of 2000 feet.

**Punchbowl Two Departure**

Depart runway 04L/04R on runway heading to Moanalua Freeway (State Highway 78/Interstate Highway H-201) or depart runway 08L and turn left paralleling Runway 04L to Moanalua Freeway. Turn right and follow Moanalua Freeway eastbound via the H-1 Freeway to Punchbowl. Proceed east of Magic Island, then offshore to remain within ½ mile of the shoreline until south of Diamond Head. After Diamond Head, turn left and resume own navigation remaining within 2 miles of the shoreline until departing Class B airspace. Maintain 1500 feet while within Class B. Departure control frequency will be 124.8/317.6. Procedure intended for twin engine aircraft.

**Runway 22/26R Procedures**

NOTE: All aircraft turn on landing lights while in CLASS B.

**Kona Five Departure**

After departure, remain over the runway until departure end, then turn left heading 180, climb and maintain 1500 feet. Expect radar vectors to avoid traffic on Runway 26L LDA final approach course. Departure control frequency will be 124.8/317.6. Helicopters depart the south ramp and proceed direct to HNL VORTAC; do not overfly any runways. From HNL VORTAC, fly heading 180, climb and maintain at or below 1000 feet.

**West Loch Five Departure**

After departure turn right as soon as practicable until north of Runway 26R. Then fly direct to the center of West Loch of Pearl Harbor. Maintain 1500 feet while in Class B. Departure control frequency will be 119.1/239.05. Helicopters maintain at or below 1000 feet. Caution: VFR traffic inbound from the H-1/H-2 Interchange will be descending out of 2000 feet.

**ARRIVAL PROCEDURES**

Arrivals must contact Approach Control and receive clearance BEFORE entering CLASS B. The HNL CLASS B is established from the HNL VORTAC. High density traffic in the vicinity of the H-1/H-2 interchange. CLASS B entry from the Pali is not recommended.

**North Six Arrival**

Contact approach control 119.1/239.05 prior to H-1/H-2 Interchange at or above 2000 feet.

PROCEDURE WHEN CLEARED:

FIXED WING AIRCRAFT: From the H-1/H-2 Interchange, proceed direct to and cross Ford Island at 1500 feet. Proceed direct to the Navy/Marine Golf Course while maintaining 1500 feet until advised by tower. Enter left downwind Runway 4R. Downwind must be flown over Runway 8L at Taxiways G/L. Aircraft must remain north of Taxiway RA. If unable, advise ATC.

HELICOPTERS: Proceed direct to Ford Island and hold, maintain at or below 1000 feet. Expect further instructions from the tower.

**West Five Arrival**

Contact approach control 119.1/239.05 prior to Kahe Power Plant at or above 2000 feet.

PROCEDURE WHEN CLEARED:

From Kahe Power Plant, proceed direct to the H-1/H-2 Interchange at 2000 feet.

FIXED WING AIRCRAFT: From the H-1/H-2 Interchange, via one of the following routes as assigned by approach control:

- a. Runway 4R: Proceed direct to and cross Ford Island at 1500 feet. Proceed direct to the Navy/Marine Golf Course while maintaining 1500 feet until advised by tower. Enter left downwind Runway 4R. Downwind must be flown over Runway 8L at Taxiways G/L. Aircraft must remain north of Taxiway RA. If unable advise ATC.
- b. Runway 22L: Proceed eastbound along the H-1 Freeway then join Moanalua Freeway to Tripler Hospital. After Tripler Hospital, enter right base Runway 22L. Maintain 1500 feet until advised by tower.

HELICOPTERS: Depart the H-1/H-2 Interchange direct to Ford Island and hold, maintain at or below 1000 feet. Expect further instructions from the tower

NOTE: Aircraft below 2000 feet should contact Kalaeloa Tower on 132.6 prior to Kahe Power Plant.

#### **East Four Arrival**

Runways 04/08 configuration. Contact App Con 124.8/317.6 prior to NORBY intersection (MKK262 radial 20 DME or CKH 112 radial 12 DME). PROCEDURE WHEN CLEARED, from NORBY, proceed southwest bound on the MKK 262 radial at or below 3500'. Expect radar vectors for right base to Runway 04R.

#### **Freeway Four Arrival**

Runways 04/08 configuration. Contact App Con 124.8/317.6 prior to CKH at or above 2000'.

PROCEDURE WHEN CLEARED:

From Koko Head, proceed direct to Waialae Golf course, then follow the H-1 Freeway to enter left downwind to Runway 04R. Downwind leg must overfly Runway 08L over Taxiway G/L. Aircraft must remain north of Taxiway RA; if unable advise ATC.

Maintain 2000' until advised by tower.

#### **Kona Six Arrival**

Runways 22/26 configuration. Contact approach control on 119.1/239.05 prior to CKH at or above 1,500 feet, or contact approach control on 124.8/317.6 prior to NORBY intersection at or below 3,000 feet. PROCEDURE WHEN CLEARED:

FIXED WING AIRCRAFT: Proceed direct to and cross Koko Head at or below 2,000 feet, then proceed to Waialae Golf Course. Follow the H-1 Freeway to enter a left base to Runway 22L. Maintain 1,500 feet until advised by the tower.

HELICOPTERS: Proceed direct to and cross Waialae Golf Course at or below 1,000 feet. Follow the H-1 Freeway to Punchbowl. Hold at Punchbowl at or below 1,000 feet.

Use caution: Turbojet aircraft will be inbound along the south shoreline.

#### **Tripler Four Arrival**

Contact Approach control 119.1/239.05 prior to H1/H2 interchange at or above 2000'. PROCEDURE WHEN CLEARED:

From H1/H2 interchange, proceed east along H1 then join Moanalua freeway to Tripler Hospital then via one of the following routes as assigned by approach control:

- a. Runway 22L: After Tripler, enter right base RWY 22L. Maintain 1500 feet until advised by tower.
- b. Runway 4R: Enter left downwind Runway 4R. Downwind must be flown over Runway 8L at Taxiways G/L. Aircraft must remain north of Taxiway RA. Maintain 2000' until advised by tower.

### **SIMULTANEOUS OPERATIONS**

Simultaneous take-offs and landings on intersecting runways are common at the Honolulu (Daniel K Inouye Intl) Airport. IT IS THE RESPONSIBILITY OF THE PILOT TO DETERMINE WHETHER HE/SHE CAN COMPLY WITH A HOLD-SHORT RESTRICTION. Upon acceptance of a "HOLD-SHORT" instruction, pilots must acknowledge the clearance with a read back of "(aircraft ID), hold short rwy (rwy number)."

### **HONOLULU (Daniel K Inouye Intl) AIRPORT**

#### **Gatehold Procedures**

THE FOLLOWING GATEHOLD PROCEDURES ARE ESTABLISHED FOR ALL NORTH AMERICA-BOUND TURBOJET DEPARTURES FROM HONOLULU (DANIEL K INOUE INTL) AIRPORT:

1. Advise clearance delivery: "identification, 10 minutes to taxi, destination, requested flight level."
2. The statement "10 minutes to taxi" means that you will depart the blocks, taxi, tow or pushback within 10 minutes after receiving enroute ATC clearance. Failure to push-back within 10 minutes after receipt of your clearance may result in ATC canceling your clearance when other aircraft are requesting the same altitude/route assignment and is/has pushed from the gate.
3. When ATC specifies a release (take-off) time for your requested route and altitude, alternatives with no or less delay will be offered, if available. If your choice involves a release time, call for push-back at least 10 minutes prior to your release (take-off) time (the intent of this procedure is to have you at the departure runway at your release time). Failure to push back 10 minutes prior to your release time may result in ATC canceling your clearance when other aircraft are requesting the same altitude/route assignment and is/has pushed from the gate.
4. ATC will not contact you if time elapses and your clearance is cancelled; it is the pilots responsibility to push-back in a timely manner. In the event the allotted time expires contact clearance delivery to verify the status of your clearance prior to calling for push-back.
5. If you wish to depart the gate and absorb the delay in a holding area closer to the departure, advise ground control of your desire.
6. When two aircraft are requesting the same altitude/route and call for clearance at approximately the same time, the first aircraft to call will receive the altitude/route. The second aircraft will receive the alternatives. The first aircraft may lose their assigned altitude/route if all the following occurs.
  - a. The first aircraft has not pushed from the gate in the specified time in paragraphs 2 or 3.
  - b. The second aircraft is/has pushed from the gate.
  - c. The second aircraft requests that altitude after push back.
7. Enroute clearances are based on accurate "10 minute to taxi" declarations. Those flight that taxi without receiving any enroute clearance will receive no altitude/route priority.

- NOTES: 1. Compliance will ensure an orderly sequence of altitude/route assignments during peak traffic movements.  
 2. Oceanic departures are sequenced with Hilo and Kahului traffic.

**Informal Runway Use Program**

Unless runway closures, wind, weather or traffic conditions, aircraft emergencies, actual air defense missions or operational necessities require otherwise, all turbojet aircraft and all aircraft having a maximum passenger capacity of more than 30 seats or a maximum payload capacity of more than 7,500 pounds, including all models of the Convair 240, 350, and 440; Martin 202 and 404; F-27 and FH227; Hawker Siddeley 748; military fighter interceptor turbojet; and any other aircraft with a minimum zero fuel weight in excess of 35,000 pounds will be assigned runway as follows:

**GROUP I**

Turbojet aircraft capable of 300,000 pounds gross takeoff weight or more 4 or more engine turbojet, and military fighter interceptor turbojet type aircraft  
 (DC10, L1011, DC8, B747, B707, KC135, B52, F15, F16, E6, etc).

**GROUP II**

Other turbojet, turbine; powered and propeller driven type aircraft.  
 (B727, B737, MD80, C130, etc).

**TRADE (NORTHEAST) WIND CONDITIONS**

Departures:	8R	8L
Arrivals:	8L	4R/L or 8L

**KONA (SOUTHWEST) WIND CONDITIONS**

Departures:	26L or 22R/L	22R/L or 26R
Arrivals:	26L	26L

**AIRCRAFT LANDING RUNWAY 8L:** Fly the ILS approach procedure or fly a base leg over Kalaeloa (John Rodgers Fld) maintaining 3000 feet until established on the final approach course. Large jet or smaller aircraft may fly a close-in base leg remaining over the center of Pearl Harbor channel.

**AIRCRAFT LANDING RUNWAY 26L/R:** Remain at traffic pattern altitudes as long as possible before beginning descent for landing.

**STANDARDIZED TAXI ROUTES FROM RUNWAY 26L**

Signatories to STR Letters of Agreement with Honolulu Control Facility may expect STR instructions from RWY 26L to the Terminal. After exiting runway 26L onto taxiway RM, RC or RB, if given standardized taxi route instructions by Honolulu Tower, comply with the assigned taxi route:

**North Route Bravo**

From taxiway RB taxi north via taxiway RB, hold short of taxiway B. From taxiway RC, or RM turn left on taxiway RA, turn right on taxiway RB, taxi north via taxiway RB, hold short of taxiway B. Hold short of taxiway B until further taxi instructions are received.

**North Route Sierra**

From taxiway RB taxi north via taxiway RB, turn right on taxiway B, turn left on taxiway Sierra, hold short of Runway 26R. From taxiway RC, or RM turn left on taxiway RA, turn right on taxiway RB, taxi north via taxiway RB, turn right on taxiway B, turn left on taxiway Sierra, hold short of Runway 26R. Hold short of Runway 26R until further taxi instructions are received.

Advise Honolulu Tower if unable to comply with the STR instructions.

**DEPARTURES – ALL RUNWAYS:** Turn southward as soon as possible after takeoff. Remain at least one mile offshore of Waikiki, Diamond Head, Koko Head and Ewa Beach.

- NOTES: 1. Cooperation of all users is expected to preclude disruption or creation of conflicting traffic flows.  
 2. Pilots unable to comply with the program should advise Honolulu Ground or Approach Control as soon as possible for traffic adjustments.

**KAHULUI AIRPORT**

**Gatehold Procedures**

THE FOLLOWING GATEHOLD PROCEDURES ARE ESTABLISHED FOR OVERSEAS TURBOJET DEPARTURES FROM KAHULUI AIRPORT:

1. Advise clearance delivery: "identification, 10 minutes to taxi, destination, requested flight level."
2. The statement "10 minutes to taxi" means that you will depart the blocks, taxi, tow or pushback within 10 minutes after receiving enroute ATC clearance.
3. When ATC specifies a release (takeoff) time of more than 15 minutes for your requested altitude/route, alternatives with no or less delay will be offered, if available. If your choice involves a release time of more than 15 minutes, advise Clearance Delivery if you desire to wait at the gate.
4. Depart the blocks within 10 minutes after receiving enroute clearance when release time is less than 15 minutes. Ready to taxi means ready to immediately depart the blocks/taxi, tow or pushback. Failure to do so will result in ATC canceling your clearance when other aircraft are requesting the same altitude/route and are ready to taxi.
5. Enroute clearances are based on accurate "10 minute to taxi" declarations. Those flights that taxi without receiving any enroute clearance will receive no altitude/route priority.

- NOTES: 1. Compliance will ensure an orderly sequence of altitude/route assignments during peak traffic movements.  
 2. Oceanic departures are sequenced with Honolulu and Hilo traffic.

**KONA INTL AT KEAHOLE (ELLISON ONIZUKA)**

**Gatehold Procedures**

THE FOLLOWING GATEHOLD PROCEDURES ARE ESTABLISHED FOR OVERSEAS TURBOJET DEPARTURES FROM KONA INTL AT KEAHOLE AIRPORT (ELLISON ONIZUKA):

1. Advise clearance delivery: "Identification, 10 minutes to taxi, destination, requested flight level."
2. The statement "10 minutes to taxi" means that you will depart the block, taxi, tow, or pushback within 10 minutes after receiving enroute ATC clearance.
3. When ATC specifies a release (takeoff) time of more than 15 minutes for your requested altitude/route, alternatives with no or less delay will be offered, if available. If your choice involves a release time of more than 15 minutes, advise Clearance Delivery if you desire to wait at the gate.
4. Depart the blocks within 10 minutes after receiving enroute clearance when release time is less than 15 minutes. Ready to taxi means ready to immediately depart the blocks/taxi, tow, or pushback. Failure to do so will result in ATC canceling your clearance when other aircraft are requesting the same altitude/route and are ready to taxi.
5. Enroute clearances are based on accurate "10 minutes to taxi" declarations. Those flights that taxi without receiving any enroute clearance will receive no altitude/route priority.

NOTES: 1. Compliance will ensure an orderly sequence of altitude/route assignments during peak traffic movements.  
2. Oceanic departures are sequenced primarily with Honolulu, Maui, and Hilo traffic.

## LIHUE AIRPORT

### Gatehold Procedures

THE FOLLOWING GATEHOLD PROCEDURES ARE ESTABLISHED FOR OVERSEAS TURBOJET DEPARTURES FROM LIHUE AIRPORT:

1. Advise clearance delivery: "Identification, 10 minutes to taxi, destination, requested flight level."
2. The statement, "10 minutes to taxi" means that you will depart the blocks, taxi, tow, or pushback within 10 minutes after receiving enroute ATC clearance.
3. When ATC specifies a release (takeoff) time of more than 15 minutes for your requested altitude/route, alternatives with no or less delay will be offered, if available. If your choice involves a release time of more than 15 minutes, advise Clearance Delivery if you desire to wait at the gate.
4. Depart the blocks within 10 minutes after receiving enroute clearance when release time is less than 15 minutes. Ready to taxi means ready to immediately depart the blocks/taxi, tow, or pushback. Failure to do so will result in ATC canceling your clearance when other aircraft are requesting the same altitude/route and are ready to taxi.
5. Enroute clearances are based on accurate "10 minutes to taxi" declarations. Those flights that taxi without receiving any enroute clearance will receive no altitude/route priority.

NOTES: 1. Compliance will ensure an orderly sequence of altitude/route assignments during peak traffic movements.  
2. Oceanic departures are sequenced with Honolulu, Maui, Hilo, and Keahole traffic.

### Informal Runway Use Program

The area directly south of Lihue Airport and west of Carters Point has been designated as a noise sensitive area. The opening of Rwy 17-35 has given us the opportunity to significantly reduce aircraft noise in the vicinity of schools and homes. This program is the result of the cooperative efforts of state, local and federal government and is designed in accordance with the U.S. Department of Transportation Aviation Noise Abatement Policy.

- A. GENERAL** Unless runway closures, weather, traffic conditions, aircraft emergencies, actual air defense missions, or operational necessity requires, aircraft will be assigned runways and routings as described in this section. Pilots are requested to adhere to these procedures during all hours, including 2100 to 0700 local.
- B. ITINERANT DEPARTURES** All jet and multi-engine propeller aircraft should depart on Rwy 03, 17, or 35. Aircraft to initiate turns seaward as soon as possible following takeoff.
- C. ITINERANT ARRIVALS** All jet and multi-engine propeller aircraft should land on Rwy 35, 21, or 17. All approaches should occur from a seaward direction.
- D. LOCAL OPERATIONS** (Touch-and-Go and Low Approach) Preferred runways for local operations of jet and multi-engine propeller aircraft are Rwy 17-35. Downwind leg for Rwy 17-35 should be at least 1 mile east of the coastline.
- E. TOWER ADVISORY** When the runway specified in these procedures is other than the runway most nearly aligned with the wind, controllers shall preface their instructions with the phrase "For Noise Abatement". If in the interest of safety a runway different from that specified is preferred the pilot is expected to advise Lihue Tower accordingly. Lihue Tower will honor such requests and advise the pilot that the runway requested is noise sensitive.

## HILO INTERNATIONAL AIRPORT

### Gatehold Procedures

THE FOLLOWING GATEHOLD PROCEDURES ARE ESTABLISHED FOR OVERSEAS TURBOJET DEPARTURES FROM HILO INTERNATIONAL AIRPORT:

1. Advise clearance delivery: "identification, 10 minutes to taxi, destination, requested flight level."
2. The statement "10 minutes to taxi" means that you will depart the blocks, taxi, tow or pushback within 10 minutes after receiving enroute ATC clearance.
3. When ATC specifies a release (takeoff) time of more than 15 minutes for your requested altitude/route, alternatives with no or less delay will be offered, if available. If your choice involves a release time of more than 15 minutes, advise Clearance Delivery if you desire to wait at the gate.
4. Depart the blocks within 10 minutes after receiving enroute clearance when release time is less than 15 minutes. Ready to taxi means ready to immediately depart the blocks/taxi, tow, or pushback. Failure to do so will result in ATC canceling your clearance when other aircraft are requesting the same altitude/route and are ready to taxi.
5. Enroute clearances are based on accurate "10 minute to taxi" declarations. Those flights that taxi without receiving enroute clearance will receive no altitude/route priority.

- NOTES: 1. Compliance will ensure an orderly sequence of altitude/route assignments during peak traffic movements.  
 2. Oceanic departures are sequenced primarily with Honolulu, Maui, and Keahole traffic.

**Preferred Departure Routing**

Hilo departures planning U.S. Mainland destinations via the Composite Route System–Hawaii to U.S. Mainland will be cleared as follows:

R578 VIA THE ITO 345 RADIAL 39 MILE DME FIX AND THE UPP 066 RADIAL TO FITES.  
 R577 VIA THE ITO 345 RADIAL 55 MILE DME FIX AND THE UPP 048 RADIAL TO EBBER.  
 R465 VIA THE ITO 345 RADIAL 158 MILE DME FIX AND THE OGG 027 RADIAL TO CLUTS.  
 R463 AND NORTH VIA V25 ARROW DIRECT APACK.

Flight plan format for these routes is as follows:

ITO345039	FITES	R578
ITO345055	EBBER	R577
ITO345158	CLUTS	R465

Your cooperation in filing flight plans in accordance with the above data will be appreciated.

**HAZARDS, CAUTIONS, AND WARNINGS**

**HAWAII – POHAKULOA TRAINING AREA:** Extensive military aircraft training in and near R3103 at speeds of 250 knots. All pilots flying over the island of Hawaii within 10 NM of R3103 (SFC to 30,000 feet) should be alert for high speed maneuvering aircraft.

**HAWAII – TRAFFIC PATTERN VOLCANIC ERUPTION AREA:** During eruptions in the Hawaii Volcanos Parks area, left hand elliptical traffic patterns will be established up wind of the eruption area for all aircraft. Minimum altitude 2000 feet above the terrain. Remain clear of smoke. Pilots are requested to maintain an alert listening watch on 122.9 MHz and announce aircraft position, direction of flight, altitude and intentions.

**HAWAII:** Caution advised all airports on Kauai, Oahu, Molokai, Lanai and Maui. Migratory bird activity surface to 1500 feet within a 5 NM radius of the airports from August–May.

**HAWAII – TOUR AIRCRAFT:** High volume tour aircraft operating over Hawaii. For traffic information, monitor 127.05 NW of ITO VOR 215 radial, monitor 122.85 SE of ITO VOR 215 radial.

**KAUAI – NAVIGATIONAL WARNING:** Electromagnetic radiation will continuously exist within a 2500 foot radius and 2500 feet above unified S band antenna located at N22°06.81´/W159°39.83´ near Kokee NASA Telemetry Station, Kauai. Helicopters and slow speed aircraft flying within the airspace will be exposed to direct radiation which may produce harmful effects to personnel and equipment. Radiation cannot be seen and must be presumed by all pilots to continuously exist.

**KAUAI – PORT ALLEN AIRPORT:** Warning – Exercise extreme caution in the vicinity of Port Allen due to high volume of Tour Rotorcraft and Fixed Wing, Glider, and Military Operations.

**KAUAI – TOUR AIRCRAFT:** High volume tour aircraft operating over Kauai. Monitor 127.05 for traffic information.

**LANAI – LANAI AIRPORT APRON AREA:** Apron use is as follows: Light acft transient parking in marked tie downs NE section of apron. Helicopters park on far NE corner of apron. Airline operations on apron area fronting terminal. Air Cargo acft operations on apron by cargo bldg SW of ARFF station; do not block access to SW apron extension. Jet/heavy acft transient parking on SE apron extension. HAZARDOUS MATERIALS handling far SE corner of apron.

**LANAI – TOUR AIRCRAFT:** High volume tour aircraft operating over Lanai. Monitor 122.9 for traffic information.

**MAUI – KAHOO LAWE ISLAND:** Flying below the altitude of 300 feet or landing on the island of Kahoolawe, Hawaii is inherently dangerous. Live unexploded munitions are on the surface of the island. Rotor and prop wash may disturb these items, resulting in a detonation. Anyone desiring to land on Kahoolawe Island must contact the Kahoolawe Island Reserve Commission at (808) 243–5029 or 243–5022.

**MAUI – KAHULUI AIRPORT/HELIPORT:** The area east of the approach end of Rwy 02 has been designated as a helicopter operating area. No fixed wing operations approved except via PPR. Contact arpt manager 808–872–3880.

**MAUI – KAHULUI AIRPORT RAMP AREA:** Yellow segmented and solid lines painted on the apron area fronting the passenger terminal represents the line of demarcation between the authority of the FAA and the State. The FAA is responsible for the control and direction of all ground traffic from the solid yellow line outward toward the field. That area is considered to be an active operating area. Aircraft, vehicles, and/or ground equipment entering this area must have prior clearance from the tower. The area lying between the line and the terminal building falls under the jurisdiction of the State. The acft pilot and ground vehicle operator crossing from the taxiway is responsible for avoiding collisions, accidents, and using safe operating procedures. Ramp area East of RWY 02–20 falls under the jurisdiction of the State. The FAA is not responsible for control or direction of ground traffic in that area. Yellow demarcation lines cross east ramp taxiway entrances. Acft with wingspan between 95´ and 112´ taxi E ramp only between Twy E and 600´ north Twy F; acft with wingspan greater than 112´ may not use E ramp taxiway. East Ramp: parking limited to MTOW 155,000 lb.; parking area north of ARFF limited to acft wingspan less than 96´; parking between 600´ north Twy F and Twy E limited to acft wingspan less than 112´.

**MAUI – HALEAKALA CONTROLLED FIRING AREA:** The Haleakala Controlled Firing Area is described as follows: From 10,000 feet MSL to unlimited within a circular area with a 1 NM radius from the Mount Haleakala Maui Observatory (located at the 10,000 foot level at N20°42.42'W156°15.38') and expanding outward and upward in a conical shape from this 1 NM radius based on an angle from the observatory of 15 degrees above the horizontal. The conical boundary leaves the 1 NM radius at 10,000 feet MSL and passes through 20,000 feet MSL at the 7.22NM radius and through 42,000 feet at the 20.90 NM radius. Pulsed Ruby Laser operations potentially hazardous to eyesight will be conducted within this area intermittently for 5 to 30 minute periods generally at night and advertised by NOTAM. Laser operations are predicted on the non-interference with IFR operations through coordination with the Honolulu Control Facility. Pilots of aircraft flying VFR should avoid the controlled firing area during its advertised time of use. As a precautionary measure however Laser operations will be suspended if an aircraft penetrates the area of concern. The status of the controlled firing area can be obtained by contacting the controlling facility.

**MAUI-KAHOO LAWE CONTROLLED FIRING AREA:** The Kahoolawe Hawaii Controlled Firing Area is described as follows: From SFC up to and including 5000' MSL within that area bounded by N20°37'30"/W156°32'48", to N20°34'48"/W156°30'24", to N20°28'56"/W156°30'24", to N20°28'06"/W156°41'48", to N20°20'30"/W156°44'12", to N20°33'12"/W156°44'30", to N20°37'30"/W156°36'24", thence to point of beginning. The CFA includes the entire island of Kahoolawe.

Ordnance disposal/demolition work potentially hazardous to aircraft shall be conducted by NOTAM during daylight hours only. The controlling agency is FAA Honolulu Control Facility. The status of the CFA can be obtained by contacting the controlling facility.

**MAUI – PARASAILING AREA:** Parasailing off-shore Lahaina (OGG VORTAC 250R/014 DME) 1000' below, sunrise to sunset.

**MAUI – AEROBATIC OPERATIONS:** 1 NM radius (OGG VORTAC 175R/011 DME) from 0315–0415Z Sundays 1500' and below.

**MAUI – ULTRALIGHT OPERATIONS:** Extensive ultralight operations from atop Mt. Haleakala to Kalama Park (OGG VORTAC 175R/011DME). Unpowered ultralights remain over land. It is recommended that aircraft arriving from the south remain offshore, west of the OGG 175R until 11 DME before turning inbound to Kahului airport.

**MAUI – TOUR AIRCRAFT:** High volume tour aircraft operating over Maui. Monitor 120.65 for traffic information.

**MAUI – VFR AIRCRAFT LANDING KAHULUI AIRPORT INBOUND FROM THE NW:** VFR aircraft landing Kahului Airport inbound from the NW should contact Honolulu Control Facility ("HCF Approach") on 120.2 at least 5 miles NW of Nakalele Point for radar identification and sequencing to the airport.

**MOLOKAI – TOUR AIRCRAFT:** High volume tour aircraft operating over Molokai. Monitor 121.95 for traffic information.

**OAHU – HONOLULU (DANIEL K INOUE INTL) AIRPORT – RAMP AREA:** Broken yellow lines, ramps and taxiways indicate the edge of full strength bearing pavement. Pilots are cautioned to avoid taxiing main gear over stabilized taxiway and apron shoulders. Shoulder pavement is stabilized only and not load bearing. Exercise care in following taxiway centerlines at all times especially on turns and at intersections. Yellow non movement area boundary lines painted on the apron area fronting the terminal complex represents a line of demarcation between the authority of the FAA and the airport operator (State). The FAA is responsible for the control and directing of all ground traffic from the non movement area boundary line outward toward the field. This area is considered an air operation area (AOA). Aircraft, vehicles and/or ground equipment entering this area must have proper clearance from the air traffic control tower. The area lying between the non movement area boundary lines inbound toward the concourse falls under the jurisdiction of the airport operator (State). The aircraft pilot and ground vehicle equipment operator crossing the non movement boundary lines from the taxiway is responsible for avoiding collisions, accidents, and using safe operating procedures in the non movement area.

**OAHU – HONOLULU (DANIEL K INOUE INTL) AIRPORT AND METROPOLITAN AREA:** Numerous cranes at the airport and metropolitan areas up to 500' AGL.

**OAHU – HONOLULU (DANIEL K INOUE INTL) AIRPORT – PROXIMITY TO KALAELOA (JOHN RODGERS FLD):** All pilots are reminded of the proximity of Honolulu (Daniel K Inouye Intl) Airport to Kalaeloa (John Rodgers Fld). Exercise caution when approaching Honolulu (Daniel K Inouye Intl) Airport as both fields have parallel Runways 04. Several landings have been made at Kalaeloa (John Rodgers Fld) by pilots mistaking it for Honolulu (Daniel K Inouye Intl) Airport. Minimum IFR altitude for aircraft overflying Kalaeloa (John Rodgers Fld) is 2200 feet.

**OAHU-KALAELOA AIRPORT NOISE ABATEMENT:** Avoid overflight residential areas and schools north and east of arpt. Rwy 11/29 available Cat A acft only; fly downwind over dep ends rws 4. All other acft Rwy 11 dep only, Rwy 29 arr only.

**OAHU – KANEHOE BAY MCAS – HIGH PERFORMANCE AIRCRAFT:** Kaneohe Bay MCAS advises high performance aircraft will make maximum performance VFR climbs from takeoff Rws 04/05 at various times following a warning broadcast on Kaneohe Tower and Approach Control frequencies. Request all aircraft contact Kaneohe Tower prior to transiting CLASS D airspace northeast of Rws 04/05.

**OAHU – KALAELOA (JOHN RODGERS FLD):** Tanker vessels with mast height up to 170 feet intermittently operating 2 NM South of approach end Rwy 04.

**OAHU – KALAELOA (JOHN RODGERS FLD) AIRPORT – PROXIMITY TO HONOLULU (DANIEL K INOUE INTL) AIRPORT:** All pilots are reminded of the proximity of Honolulu (Daniel K Inouye Intl) Airport to Kalaeloa (John Rodgers Fld). Departing aircraft must complete assigned departure heading within two nautical miles from the departure end of the runway. Advise Tower if unable to comply.

**OAHU – GLIDER OPERATIONS:** Caution – Gliders operating over central Oahu, 20 NM Radius of the location of the now-decommissioned Wheeler (HHI) NDB (21°28.67'N 158°02.03'W excluding HNL TCA), surface to 22,000 feet during mountain wave conditions. Occasional higher operations in unusually strong conditions. Gliders aren't normally transponder equipped and aren't visible on ATC radar.

**OAHU – HAZARD AREAS:** (1) Pilots are cautioned to avoid, or maintain a minimum of 500 feet AGL over the following ammunition storage areas due to significant threat to life and property posed by possible forced landing or other mishap.

AREA	DIMENSIONS	LOCATION FROM HNL VORTAC
NAD Waikele	1.5 NM Radius	353 radial at 5.2 DME
NAD Luualaei	2.5 NM Radius	316 radial at 9.7 DME

(2) All pilots are cautioned to avoid Kaena Point land mass within 1 1/2 NM (9,120 feet). Potential personnel and electro-explosive device hazards exist due to high power radio frequency transmitters.

---

**FEDERATED STATES OF MICRONESIA  
WENO ISLAND—CHUUK INTERNATIONAL AIRPORT**

1. Prior permission required for all non-scheduled aircraft from Civil Aviation Directorate, Department of Transportation, Communications and Infrastructure, Division of Civil Aviation, P.O. Box PS 2, Palikir, Pohnpei, FM 96941-0000; Tel (691) 320-2865; Fax (691) 320-5853; e-mail [TransFSM@mail.fm](mailto:TransFSM@mail.fm)
  2. A copy of clearance and schedule must then be submitted to:
    - a) Chuuk International Airport, P.O. Box 189, Weno, Chuuk State, FM 96942; Tel—Office (691) 330-5940, SWARS (691) 330-2352; FAX (691) 330-4242; e-mail [ChuukAirport@mail.fm](mailto:ChuukAirport@mail.fm). The Chuuk Airport Executive Manager must be notified three (3) days prior for the ETA of the aircraft. A flight plan must be filed 12 hours prior for the ETA, include Pohnpei Intl Airport (PTPN) as an additional address of the Flt Plan.
    - b) Immigration Office, P.O. Box 666, Weno, Chuuk State, FM 96942; Tel. (691) 330-2355; FAX (691) 330-4135; e-mail [CIL@mail.fm](mailto:CIL@mail.fm)
    - c) Customs Office, P.O. Box 610, Weno, Chuuk State, FM 96942; Tel. (691) 330-4482; FAX (691) 330-5893; e-mail [CTAChk@mail.fm](mailto:CTAChk@mail.fm)
    - d) Quarantine Office, Tel (691) 330-3720; FAX (691) 330-3721; e-mail [ChuukQuart@mail.fm](mailto:ChuukQuart@mail.fm)
  3. Transient aircraft must make prior arrangements with Mobil Oil Guam for fuel and also Mobil Oil Micronesia—Chuuk, P.O. Box 130, Weno, Chuuk State, FM 96942, Tel (691) 330-2540; FAX (691) 330-2688.
- 

**GUAM CTA/MARIANA ISLANDS**

**GUAM—APRA HARBOR—OROTE POINT**

In the interest of national security, the Commander, Naval Forces Marianas (COMNAVMAR) requests all civil aircraft avoid overflying U.S. Naval ships and military property west of a line between Santa Rita and Piti below 1500 feet.

**RADAR SERVICE PROGRAM GUAM TERMINAL AREA**

The VFR radar service program in the Guam Terminal Area provides full time radar advisory and sequencing service to VFR aircraft within 25 miles of the Nimitz VORTAC and radar advisory sequencing and separation within the Andersen TRSA and arriving Andersen AFB. Pilots of VFR aircraft arriving airports in Guam Terminal Area should contact Guam Approach Control when 25 NM from the Nimitz VORTAC. All aircraft use 269.0 or 119.8 MHz. Approach control will issue runway, wind and traffic information, and vectors as necessary for proper sequencing with other arriving aircraft at Andersen AFB and Agana airports. When a pilot reports the aircraft he is to follow in sight, he will be advised to follow it. Departing VFR aircraft desiring traffic information should request VFR radar service on initial contact with Andersen Ground Control or Agana Tower, and advise direction of flight. Tower will advise when to contact departure control and frequency. Since this is a voluntary program, the procedures are not to be interpreted as relieving pilots of their responsibilities to see and avoid other traffic operating in basic VFR weather conditions, to maintain appropriate terrain and obstruction clearance, or to remain in weather conditions equal to or better than the minima required by FAR 91.155. Whenever compliance with an assigned route or heading is likely to compromise pilot responsibility respecting terrain and obstruction clearance and weather minima, Guam approach control should be so advised so that the heading may be revised as appropriate.

- NOTES: 1. A graphic depiction of the Guam Terminal Area and Andersen TRSA may be found at the end of this section.  
2. Information on flying within a TRSA may be located in Section V of this supplement or in the Aeronautical Information Manual.

**TINIAN INTL AIRPORT – COMMUNICATION**

Airport with UNICOM available from 2000-0930Z. When inbound tune to 123.6 about 15 miles from the airport (if IFR when the controller advises CHANGE TO ADVISORY FREQUENCY APPROVED) and listen for any other aircraft communicating with the UNICOM operator. When about 5 miles from the airport inform the operator of your position, altitude and intentions. When outbound contract the UNICOM operator before taxiing and furnish your position on the airport and intentions. In both cases the UNICOM operator will provide runway, wind and traffic information.

**HAZARDS, CAUTIONS, AND WARNINGS**

**GUAM – SATELLITE TRACKING OPERATIONS:** Because of possible interference with satellite tracking operations and to avoid a potentially hazardous radiation field, pilots are advised to avoid the area within 1 NM of the UNZ VORTAC 033R at 12.2 DME at and below 3100 feet.

**GUAM – BALLOON RELEASE:** National Weather Service Guam Observatory releases twice ascending balloon borne atmospheric sensing instruments at N13°33' /E144°50' between 1100-1115Z and 2300-2315Z. Instrument equipment consists of 6 foot diameter rubber balloon with string train 100 feet in length containing a red paper parachute and small white plastic radiosonde instrument. Equipment estimated to ascend to altitudes of 10,000 feet within a 5 mile radius by 1130Z and 2330Z. Ascends to 50,000 feet by 1215Z and 0015Z. Ascends to 100,000 feet by 1300Z and 0100Z respectively.

---

---

**AUCKLAND OCEANIC FIR****1. Altimeter Setting Requirements**

- 1.1 Within the Auckland Oceanic FIR, the vertical position of aircraft shall be maintained by reference to standard pressure value of 1013.2 hPa, except that:
  - a. Aircraft shall change to and from the appropriate zone QNH value upon entering and leaving the QNH zones;
  - b. Where the aerodrome of destination or departure is not within a QNH zone aircraft shall use the appropriate aerodrome QNH value when at or below 13,000 feet within 100NM from the shoreline of the landmass on which the destination or departure aerodrome is situated.
- 1.2 Within the New Zealand domestic, Samoa, Tonga and Cook Area QNH Zones, when at or below 13,000 feet aircraft shall maintain vertical position by reference to the appropriate zone QNH, except that aircraft landing and taking off or operation within a control zone shall use the appropriate aerodrome QNH. However, a QFE altimeter setting may be used in accordance with paragraph 1.7.
- 1.3 The transition layer between the transition altitude of 13,000 feet and the transition level of FL150 provides adequate separation between aircraft observing different pressure values when the QNH is above 980 hPa. However, when the zone QNH is 980 MB or less, the minimum usable flight level above the zone involved shall be FL160.
- 1.4 The transition layer shall not be used except when ascending or descending. While passing through the transition layer, vertical position shall be expressed in terms of flight levels (1013.2 hPa) when ascending and in terms of altitude (QNH) when descending.
- 1.5 Pilots departing from an aerodrome where no QNH value is available shall set the aerodrome elevation on the altimeter prior to departure and shall obtain the appropriate altimeter setting as soon as possible and in any case before entering IMC.
- 1.6 QNH values passed to aircraft will be rounded down to the nearest whole hPa.
- 1.7 Use of QFE Altimeter Setting.
- 1.7.1 Where suitable equipment is available, a QFE altimeter setting will be provided, on request, for flights operating by visual reference within an aerodrome traffic circuit. Additionally, foreign operators normally using a QFE altimeter setting for instrument approaches will be provided, on request, with a QFE for the aerodrome elevation except for:
  - a. An instrument runway, if the runway threshold is 7 feet or more below the aerodrome elevation;
  - b. A precision approach runway, in which case the QFE for the relevant threshold elevation will be provided.
- 1.7.2 QFE values passed to an aircraft will be rounded down to the nearest whole hPa.

**2. Enroute Communications**

- 2.1 Aircraft enroute within the Auckland Oceanic FIR shall maintain a continuous listening watch on the frequency assigned by the Air/Ground control station.

NOTE: The requirement to maintain a continuous listening watch may be met by the use of approved automatic signaling devices such as SELCAL.
- 2.2 Aircraft inbound to Auckland Oceanic FIR shall establish RTF contact with ATC on Auckland Oceanic frequencies at the Auckland boundary. Outbound aircraft shall transfer to route frequency when instructed by ATC.
- 2.3 Aircraft entering the Samoa, Tonga, Cook or New Zealand domestic sectors, will be instructed when to change from route frequency to the frequency of the appropriate ATC unit. Aircraft leaving these sectors will be instructed by ATC when to change to the route frequency.

**3. Enroute Air Navigation Facilities and Service Charges**

Airways Corporation, the ATC service provider in the upper airspace of the Auckland Oceanic FIR, levies charges for enroute air navigation services provided to aircraft. Operators of any aircraft for which navigation services are made available in the Auckland Oceanic FIR should be aware that they may be obligated to pay charges for the services provided.

---

**OAKLAND OCEANIC OCA/FIR****CENTRAL EAST PACIFIC (CEP)**

1. The Central East Pacific (CEP) is the organized route system between Hawaii and California. Seven ATS routes, R463, R464, R465, R585, R576, R577, R578, and associated transition waypoints are within the CEP. Reduced Vertical Separation Minimum (RVSM) and Required Navigation Performance 10 (RNP-10) are required for aircraft operating within the CEP at FL290 through FL410. Non-approved aircraft can expect FL280 and below or FL430 and above, traffic permitting.
2. ATS Routes R464, R465, R585, R576 and R577 are one-way routes and any odd or even cardinal flight level may be flight planned.
3. Applicable ATC procedures can be found in Order JO 7110.65 and ICAO Document 7030 – PAC/RAC.

**RNP-10 SEPARATION**

RNP-10 lateral separation (50 NM) may be applied within the Oakland OCA/FIR between RNP-10 approved aircraft. RNP-10 lateral separation is based on the equipment qualifier filed by the aircraft. Operators shall determine that the appropriate state authority has approved the aircraft and the aircraft will meet the RNP-10 requirements for the filed route of flight and any planned alternate routes. The letter "R" in field 10a (equipment) of the ICAO standard flight plan indicates PBN (Performance Based Navigation). Associated with the "R" in field 10a, the flight plan should also contain PBN/A1 in field 18 of the FPL to indicate RNP10. This equipment qualifier should be filed provided the aircraft will maintain RNP-10 eligibility for the entire route segment within the Oakland Oceanic FIR. RNP-10 approval is required for all PACOTS and for all aircraft operating within the CEP at FL290 through FL410. Non-approved aircraft can expect FL280 and below or FL430 and above, traffic permitting.

**RNP-4 SEPARATION**

RNP-4 lateral separation (30 NM) may be applied within the Oakland OCA/FIR between RNP-4 approved aircraft with FANS equipment. RNP-4 lateral separation is based on the equipment qualifier filed by the aircraft. Operators shall determine that the appropriate state authority has approved the aircraft and the aircraft will meet the RNP-4 requirements for the filed route of flight and any planned alternate routes. The letter "R" in field 10a (equipment) of the ICAO standard flight plan indicates PBN (Performance Based Navigation). Associated with the "R" in field 10a, the flight plan should also contain PBN/L1 in field 18 of the FPL to indicate RNP4. The code "PBN/L1" in field 18 of the ICAO standard flight plan should be filed provided the aircraft will maintain RNP-4 eligibility for the entire route segment within the Oakland Oceanic FIR.

**RVSM SEPARATION**

Reduced Vertical Separation Minimum (RVSM- 1,000 foot vertical separation between RVSM approved aircraft) may be applied within the Oakland OCA/FIR between FL290 and FL410. Aircraft operating within this airspace between FL290 and FL410 require RVSM approval. RVSM vertical separation will be based on the equipment qualifier filed by the aircraft. The operators shall determine that the appropriate state authority has approved the aircraft and the aircraft will meet the RVSM requirements for the filed route of flight and any planned alternate routes. The letter "W" in field 10a (equipment) of the ICAO standard flight plan indicates RVSM approved aircraft.

**1. Non-RVSM Equipped Civil Aircraft:**

- a. Non-RVSM equipped civil aircraft unable to fly to an appropriate destination at or below FL280 and unable to fly at or above FL430 may flight plan at RVSM flight levels in the RVSM stratum provided one of the following conditions exists:
  - (1) The aircraft is being initially delivered to the state of registry or operator;
  - (2) The aircraft was formerly RVSM approved but has experienced an equipment failure and is being flown to a maintenance facility for repair in order to meet RVSM requirements and/or obtain approval; or
  - (3) The aircraft is being utilized for mercy or humanitarian purposes.
- b. The approval for non-RVSM is intended exclusively for the purposes indicated above.

**2. Non-RVSM Equipped State Aircraft:**

Non-RVSM state aircraft may flight plan at RVSM flight levels without prior coordination. State aircraft should include "STS/Military NON-RVSM" in field 18 of the ICAO standard flight plan.

**3. Suspension of RVSM:**

ATC will consider suspending RVSM procedures within affected areas of the Oakland OCA/FIR when there are pilot reports of greater than moderate turbulence. Within areas where RVSM procedures are suspended, the vertical separation minimum between all aircraft will be 2000 ft.

**CONTROLLER PILOT DATA LINK COMMUNICATIONS (CPDLC)**

Oakland ARTCC has full CPDLC capability and normal service in the entire Oakland OCA/FIR for FANS-1/A capable aircraft. The Oakland OCA/FIR log-on address is "KZAK"; the facility is "OAKODYA."

**1. HF Communications Requirement**

Prior to entering the Oakland OCA/FIR, contact ARINC on HF and identify the flight as CPDLC equipped. Provide SELCAL, departure and destination, aircraft registration number and advise whether SATVOICE equipped. Expect to receive primary and secondary HF frequency assignments from ARINC for the entire route of flight within the Oakland OCA/FIR. Pilots must maintain HF communications capability with ARINC at all times within the Oakland OCA/FIR.

**2. Log-On**

- a. For aircraft departing from airports along the west coast of North America, Guam and Hawaii, Oakland Oceanic Control requires that data-link aircraft not logon to Oakland oceanic (KZAK) until after leaving 10,000' MSL. This request is made to eliminate ADS periodic reports for aircraft that are still on the ground which will assist in the transition from the domestic airspace automation environment. Additionally, this should reduce operator cost.
- b. Aircraft entering the Oakland OCA/FIR CPDLC service area from non-CPDLC airspace: Log on to CPDLC at least 15 but not more than 45 minutes prior to entering the Oakland OCA/FIR CPDLC service area. Contact ARINC on HF and inform them you are a CPDLC flight. Send a position report when CPDLC is established.
- c. Aircraft entering the Oakland OCA/FIR CPDLC service area from adjacent CPDLC airspace: Pilots should determine the status of the CPDLC connection. If KZAK is the active center, the pilot shall contact ARINC on HF, identify the flight as a CPDLC flight, and send a position report via CPDLC. If KZAK is not the active center, the pilot shall, within 5 minutes after the boundary is crossed, terminate the CPDLC connection, then log on to KZAK, contact ARINC on HF and inform them you are a CPDLC flight. Send a position report when CPDLC ATC COM is established.

**3. CPDLC Position Report Message Format**

Oakland OCA/FIR (KZAK) cannot accept position reports containing latitude and longitude (Lat/Long) in the ARINC 424 format, which is limited to five characters (e.g. 40N50). Position reports in the KZAK CPDLC service area containing Lat/Long waypoints will be accepted in complete latitude and longitude format only. Flights unable to send position reports in complete latitude and longitude format must accomplish position reporting via HF voice communications.

**4. Aircraft Over-Flying Honolulu Control Facility (HCF) Airspace.**

Prior to entering HCF airspace, aircraft will receive an END SERVICE message that will result in termination of CPDLC. Aircraft shall re-log on to CPDLC prior to reentering Oakland OCA/FIR (KZAK) airspace when HCF advises to contact en route communications or ARINC.

**5. Aircraft Entering Guam CERAP Airspace.**

Contact Guam CERAP 250 miles out on 118.7, squawk 2100.

**6. Aircraft Over-Flying Guam CERAP Airspace.**

The CPDLC and ADS connection with Oakland ARTCC may be terminated within the Guam CTA. If the CPDLC connection with KZAK is not terminated, do not use CPDLC for ATC COM until Guam CERAP advises you to again contact en route communications or ARINC. It may be necessary to log back on to CPDLC with KZAK 10–15 minutes prior to exiting the Guam CTA if the CPDLC connection was terminated.

**BEACON CODE REQUIREMENTS**

Upon reaching the first compulsory reporting point in KZAK FIR airspace and after radar service is terminated, all aircraft should adjust their transponder to display code 2000 on their display. Aircraft should maintain code 2000 thereafter until otherwise directed by air traffic control.

**PACIFIC ORGANIZED TRACK SYSTEM (PACOTS) GUIDELINES**

**1. General Information**

- a. Geographical Boundary. PACOTS tracks may be established within the Oakland Oceanic, Fukuoka, and Anchorage FIRs.
- b. Track Definition Message (TDM). Oakland ARTCC is using the TDM format for PACOTS tracks. Questions regarding published PACOTS tracks should be directed to Oakland ARTCC Traffic Management Unit (TMU), at (510) 745–3771.
- c. Number and Designator of PACOTS Tracks

(1) Oakland ARTCC or Fukuoka Air Traffic Management Center (ATMC) may develop more or fewer tracks according to user needs, military activity, significant weather, or other limitations.

(2) ROUTES	TRACK DESIGNATORS
Hawaii to Japan _____	A
Hawaii to Japan _____	B (optional)

Asia to North American West Coast _____	14
Asia to North American West Coast _____	15 (optional)

d. Usable Flight Levels

(1) All IFR flight levels at or above FL290 except the Westbound North America-Japan PACOTS which also includes FL280 in the Oakland OCA/FIR. The Westbound North America-Japan PACOTS are included in the Track Advisory Program. Certain restrictions may apply for non-PACOTS traffic operating in the opposite direction to the published PACOTS system.

e. Lateral Spacing of Tracks

(1) PACOTS Tracks are established at least 50 NM apart. Tracks are defined using latitude/longitude expressed in whole degrees or named waypoints with the exception of FIR crossing points.

f. Flight Planning

(1) The following flight planning restrictions and rules only apply within the oceanic control areas of the respective FIRs. Furthermore, these restrictions do not affect aircraft filing on ATS routes in the CEP route system or the NOPAC Composite Route System unless individual routes within these systems are specifically identified as unusable in NOTAMs.

(a) Participating Aircraft

- 1. Aircraft requesting altitudes at or above FL280 may file via route published in the daily NOTAM or track message.
- 2. Operators may file to leave or join an outer PACOTS track at any reporting point. Aircraft leaving an outer track should file routes that diverge, within 10 degrees of longitude, to at least 50 NM from the nearest PACOTS track. Flight level assignment for aircraft joining an outer track will be based on traffic.
- 3. Operators must file appropriate SIDs and STARs associated with the departure/arrival airports.
- 4. Operators must flight plan to avoid active military airspace.

(b) Non-Participating Aircraft. Random routes under the PACOTS at FL270 and below are permitted, unless otherwise prohibited by NOTAM. Higher Altitude may be approved if traffic permits.

g. ATC Procedures

- (1) For flight planning and initial clearances, crossing between PACOTS tracks at FL280 and above will not be permitted. Once established on the PACOTS track, changes may be approved as traffic permits.
- (2) Aircraft should not expect to climb into the PACOTS traffic unless filed on a route corresponding to a PACOTS track. In this case, climb into the PACOTS will be approved as traffic permits.
- (3) The minimum longitudinal separation between aircraft crossing the Fukuoka FIR boundary on the same track at the same flight level will be 10 minutes using Mach Number Technique or applicable ADS–C distance-based separation standard.

## h. Position Reporting

- (1) Within the Oakland and Anchorage oceanic control areas position reports shall be made using latitude/longitude coordinates or named fixes as specified in the TDM. Position reports shall comprise information on present position, estimated next position, and ensuing position in accordance with ICAO procedures. Rounding off geographical coordinates is prohibited.

**2. Eastbound Japan-Hawaii PACOTS**

## a. Time Frame

- (1) Effective daily 1000–2100 UTC for aircraft crossing 160 degrees east longitude between 1200 and 1600 UTC.

## b. Notification of Japan-Hawaii PACOTS

- (1) Notification of the geographical coordinates of Track 11 and optional Track 12 will be transmitted by TDM and NOTAM at approximately 2200 UTC daily by Fukuoka ATMC.

## c. Flight Planning

- (1) Participating eastbound aircraft departing from or traversing Central West Japan and crossing 160 degrees east longitude between 1200 UTC to 1600 UTC should flight plan as described in the daily TDM and NOTAM.

## d. User Preferred Routes (UPR)

- (1) Aircraft Operators have the option of flight planning a UPR instead of utilizing the Japan-Hawaii PACOTS.  
 (2) No altitude penalties will be incurred by aircraft flight planning a UPR that conflicts with PACOTS Track 11 or 12.  
 (3) The details and procedures for flight planning Japan-Hawaii UPRs are detailed in the next section.

**3. Westbound Hawaii-Japan PACOTS**

## a. Time Frame

- (1) Effective daily 1900–0800 UTC for aircraft crossing 160 degrees east longitude between 2300 and 0600 UTC.

## b. Notification of the Hawaii-Japan PACOTS

- (1) Notification of the geographical coordinates of Track A and optional Track B will be transmitted by TDM and NOTAM at approximately 1100 UTC daily by Oakland ARTCC.

## c. Flight Planning

- (1) Participating westbound aircraft departing Hawaii to Japan and crossing 160 degrees east longitude between 2300UTC and 0600 UTC should flight plan as described in the daily TDM and NOTAM.

## d. User Preferred Routes (UPR)

- (1) Aircraft Operators have the option of flight planning a UPR instead of utilizing the Hawaii-Japan PACOTS.  
 (2) No altitude penalties will be incurred by aircraft flight planning a UPR that conflicts with PACOTS Track A or B.  
 (3) The details and procedures for flight planning Hawaii-Japan UPRs are detailed in the next section.

**4. Eastbound Japan/Asia - North America PACOTS**

## a. Time Frame

- (1) Effective daily from 0700 UTC to 2300 UTC applies to traffic crossing 160 degrees east longitude between 0900 UTC and 1400 UTC.

## b. Notification of the Japan-North America PACOTS

- (1) Notification of the geographical coordinates of the selected PACOTS tracks will be transmitted by TDM and NOTAM at approximately 2200 UTC daily by Fukuoka ATMC. Number will designate tracks with the northernmost being referred to as TRACK 1.

## c. Flight Planning

- (1) Participating aircraft from or over Japan to North America and crossing 160 degrees east longitude between 0900 UTC and 1400 UTC should flight plan as described in the daily TDM and NOTAM.

## d. User Preferred Routes (UPR)

- (1) Aircraft Operators have the option of flight planning a UPR instead of utilizing the PACOTS Track 1, 3, 14 or 15.  
 (2) No altitude penalties will be incurred by aircraft flight planning a UPR that conflicts with PACOTS Track 1, 3, 14 or 15.  
 (3) The details and procedures for flight planning PACOTS Track 1, 3, 14 and 15 UPRs are detailed in the next section.

**5. Westbound North America–Japan PACOTS**

## a. Time Frame

- (1) Effective daily from 1900 UTC to 0800 UTC. Required for traffic crossing 160 degrees east longitude between 0000 UTC and 0600 UTC.

## b. Notification of Tracks

- (1) Notification of selected PACOTS tracks will be transmitted by TDM and NOTAM at approximately 1100 UTC daily by Oakland ARTCC. The number of tracks each day will be determined by the position of the jet stream.

## c. Flight Planning

(1) Participating aircraft flying from North America to the Fukuoka FIR and crossing 160 degrees east longitude between 0000 UTC and 0600 UTC should flight plan as described in the daily TDM and NOTAM.

**6. Westbound North American-Asia PACOTS**

- a. Westbound PACOTS tracks serving destinations in Asia are published twice daily.
- b. Time Frame
  - (1) Tracks H and I are applicable for traffic crossing 160 degrees east longitude between 0200 UTC and 0600 UTC.
  - (2) Tracks J and K are applicable for traffic crossing 160 degrees east longitude between 1400 UTC and 2100 UTC.
- c. Notification of Tracks
  - (1) Notification of PACOTS "H" and "I" will be transmitted by TDM and NOTAM at approximately 1100 UTC.
  - (2) Notification of PACOTS "J" and "K" will be by TDM and NOTAM at approximately 0000 UTC.
- d. Flight Planning
  - (1) Participating aircraft flying between North America and Asia should flight plan as described in the daily TDM and NOTAM.
- e. User Preferred Routes (UPR)
  - (1) Aircraft Operators have the option of flight planning a UPR instead of utilizing PACOTS Tracks 1, 3, 11/12, 14/5, A/B, H/I, J or K.
  - (2) No altitude penalties will be incurred by aircraft flight planning a UPR that conflicts with the tracks listed in e.(1) above when the appropriate guidelines are followed.

**USER PREFERRED ROUTE (UPR) GUIDELINES**

- 1. **Geographical Boundary.** UPRs may be utilized within the specified FIRs as detailed in the Oakland ARTCC website.
- 2. **UPR General Guidelines:**
  - a. The UPR must be planned to avoid military special use airspace when active.
  - b. The UPR must utilize a published STAR where appropriate.
  - c. Conditions that may not allow the use of UPRs
    - (1) Operators will be informed whenever a condition exists that does not allow the use of UPRs within a particular FIR.
    - (2) Conditions that may not allow the use of UPRs include large scale military operations and typhoons.
    - (3) For further information or questions regarding UPRs, contact the Oakland Oceanic Supervisor at (510) 745-3342.
- 3. **Specific Guidelines for filing UPRs associated with PACOTS Tracks or between specified City Pairs are listed on the Oakland ARTCC Website:**

*[www.faa.gov/about/office\\_org/headquarters\\_offices/ato/service\\_units/air\\_traffic\\_services/artcc/oakland/](http://www.faa.gov/about/office_org/headquarters_offices/ato/service_units/air_traffic_services/artcc/oakland/)*

**OCEANIC TAILORED ARRIVAL (OTA) GUIDELINES**

- 1. **General Information**
  - a. Pilots are required to have the necessary training by their companies prior to utilizing the OTA.
  - b. Aircraft must be FANS 1/A equipped.
  - c. Aircraft must downlink a free-text message "RQST TA" at least 45 minutes prior to exiting oceanic boundary.
  - d. Questions regarding OTAs should be addressed to Dustin Byerly, Support Manager - Oceanic Airspace and Procedures at (510) 745-3543 or Michael Martinez, Support Specialist at (510) 745-3320.
- 2. **KSFO Pacific TA**
  - a. The Pacific TA for KSFO is only available during West Plan operation (RWY28).
  - b. San Francisco arrivals on PACOTS Track 2 that desire a Tailored Arrival may request a reroute (DARP) over the following fixes after entering Oakland Oceanic airspace:
    - (1) FATMO;
    - (2) DACEM;
    - (3) CEPAS;
    - (4) BUTEN; or
    - (5) ALLBE.
- 3. **KLAX Catalina TA**
  - a. The Catalina TA for KLAX is only available during West Plan operation (RWY25).
  - b. The TA is only available to aircraft routed over FICKY. Aircraft filed over other fixes may request a reroute (DARP) to FICKY.

**GUAM AREA PREFERENTIAL ROUTING**

1. Due to traffic congestion within the Oakland OCA/FIR north, south and west of the airspace delegated to Guam CERAP (A 250NM radius of 13°32'N/144°55'E) preferred routings have been established. This notice applies to all turbojet aircraft at or above FL280 operating within the Oakland OCA/FIR north, south or west of the Guam CTA. The following are the Guam area preferential routings within the Oakland OCA/FIR. Aircraft operators must ensure that these preferential routes are indicated in Field 15 of the ICAO standard flight plan. The acronym FPRD in the descriptions below means flight plan route to destination.
2. **Southbound aircraft en route from the Fukuoka OCA/FIR and terminating within Guam CERAP delegated airspace:**
  - a. OVER KEITH – KEITH R584 OTTRE FPRD
  - b. OVER PADKO – PAKDO G339 RIDLL FPRD
  - c. OVER MONPI – MONPI A597 REEDE FPRD MONPI A216 RIDLL FPRD
  - d. OVER OMLET – OMLET B586 WINZR FPRD
  - e. OVER TEGOD – TEGOD G205 GUYES FPRD TEGOD A337 SNAPP W21 HIRCH FPRD
3. **Northbound aircraft originating within Guam CERAP delegated airspace, en route to destinations within the Fukuoka OCA/FIR:**
  - a. OVER MIKYY – MIKYY R584 KEITH FPRD
  - b. OVER NATSS – NATSS G339 PAKDO FPRD
  - c. OVER OATSS – OATSS A216 MONPI FPRD
  - d. OVER RICHH – RICHH A597 MONPI FPRD
  - e. OVER TOESS – TOESS B586 OMLET FPRD
  - f. OVER TERYY – TERYY G205 TEGOD FPRD
  - g. OVER TEEDE – TEEDE A337 TEGOD FPRD

NOTE 1: Aircraft within the Oakland OCA/FIR and transiting Guam CERAP delegated airspace must flight plan to enter/exit Guam Center airspace on an appropriate ATS route(s) or other established compulsory reporting points (e.g., FATUM or JOBSS).

NOTE 2: With the exception of aircraft flight planned via Oceania UPR procedures, operators flight planning at or above FL280 with filed routes other than those described above should expect to be re-routed to the preferential route. Requests for alternate routes will be considered on a real-time basis as traffic conditions permit. However, aircraft should file for and be prepared to fly the entire preferential route. Aircraft operating EAST of 150E longitude will not be affected.

**OAKLAND OCA ISLAND AIRPORTS****1. Clearances**

- a. When requesting an IFR clearance while on the ground, make every effort to communicate through ARINC. If unable to contact ARINC a request for an IFR clearance can be made via direct communications with the sector controller via telephone.
- b. If unable to receive a clearance through any of the above means and you elect to depart VFR in accordance with ICAO Annex 2 and Document 7030, continue efforts to establish communication and obtain a clearance as soon as possible.

NOTE: Rules pertaining to VFR flight may be found within Section III—General Notices of this supplement.

**2. Hazards**

- a. Kwajalein Atoll-Dyess AAF: Electromagnetic radiation will exist 24 hours daily within 2.17 NM radius of Dyess AAF from the surface to 13,000 feet. Aircraft within this airspace may be exposed to direct radiation, which may be harmful to personnel and equipment.
- b. Kwajalein Atoll-Bucholz AAF: Electronic radiation may exist 24 hours daily within 5nm radius of Bucholz AAF from surface to 30,000 feet.
- c. Kwajalein Atoll-180 NM Radius: Hazardous military activity will be conducted which affect aircraft at all altitudes and flight levels within a 180 NM radius of 0843.3N/16743.8E until further notice. All nonparticipating VFR pilots are advised to remain well clear of the area. IFR flights under ATC jurisdiction may expect possible reroute to and from Bucholz Airport. For further information, contact Kwajalein Range Safety Officer at 805-355-1516.

CHART NOT TO SCALE

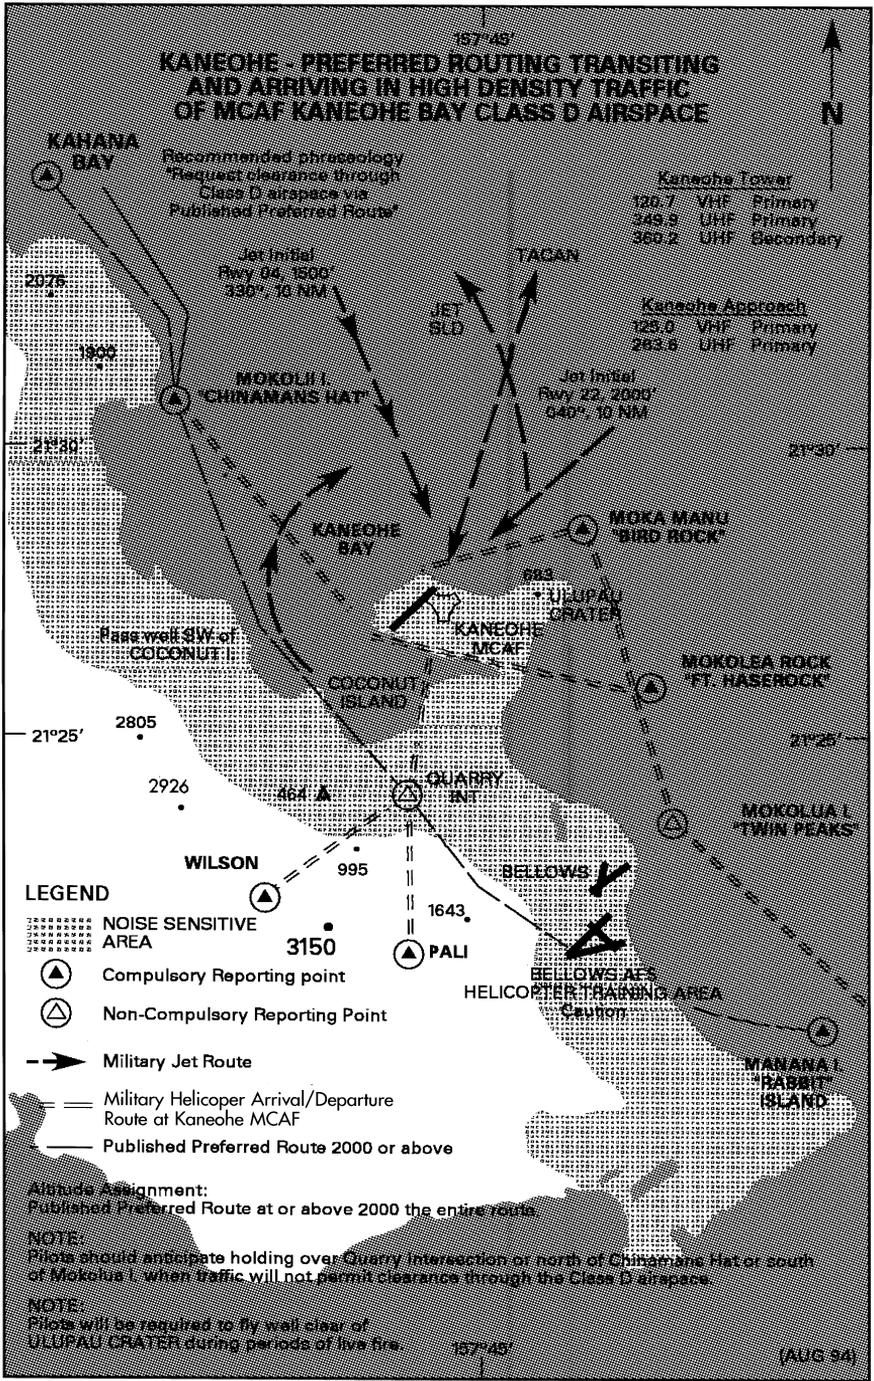

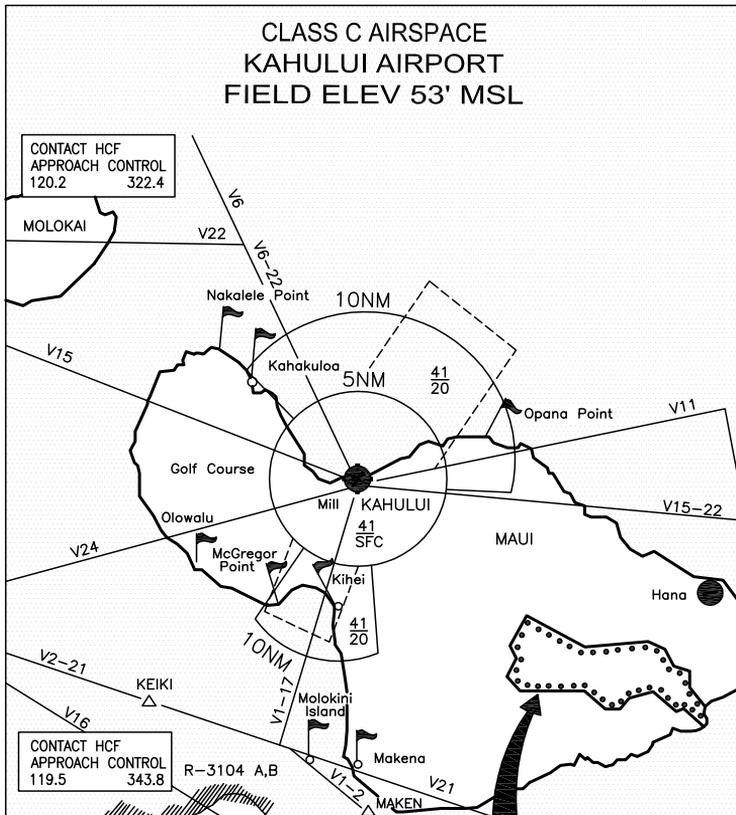

### GUAM TERMINAL AREA

Heavily travelled routes for high performance aircraft arriving and departing Guam Intl and Andersen AFB should be avoided by light aircraft pilots flying VFR. The largest concentration of aircraft occurs within a radius of approximately 15 miles of the airports and at an altitude up to and including 4000 feet.

In addition to the above there are two areas of activity to be avoided, both outside the Agana Class D airspace. The first - ALFA - is a light aircraft low altitude training area within a 6 mile radius of Inarajan Bay. Aircraft training in this area should operate at or below 1800 feet and should monitor Guam Approach Control on freq 119.8. The second area - BRAVO - is a light aircraft high altitude training area for use up to 10,000 feet. This area is within a 5 mile radius of Cocos Island. Aircraft in this area should also monitor Guam Approach Control on 119.8.

LEGEND

VFR CHECK POINTS

FLOOR IN HUNDREDS OF FEET MSL  $\frac{41}{20}$

CEILING IN HUNDREDS OF FEET MSL  $\frac{41}{20}$

HALEAKALA NATIONAL PARK

Public law prohibits flight of VFR helicopters or Fixed-wing aircraft below 9500 feet MSL over the following areas in Haleakala National Park: Haleakala Crater, Crater Cabins, the Scientific Research, Halemau Trail, Kaupo Gap Trail or any designated tourist viewpoint.

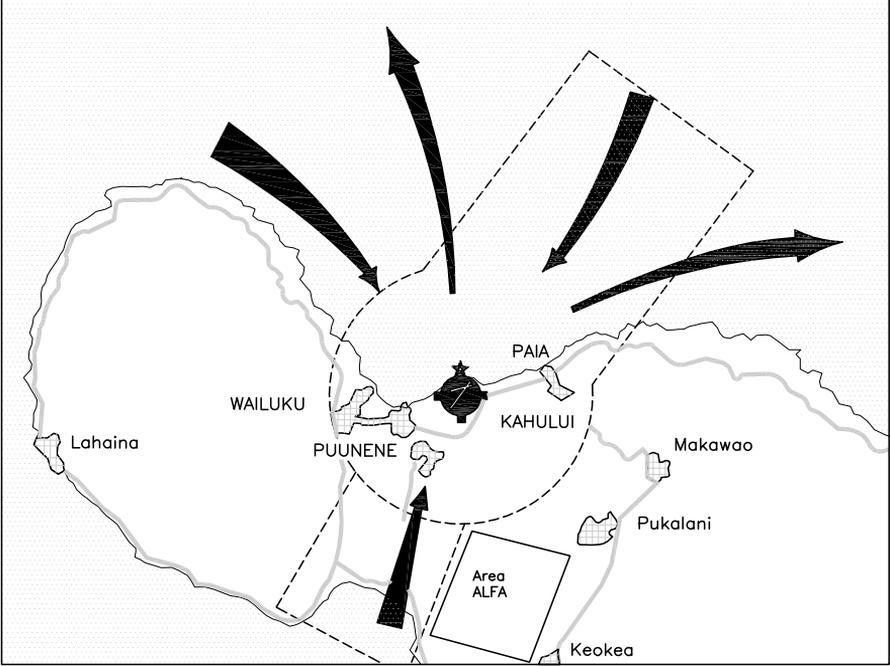

### CLASS C AIRSPACE PROCEDURES

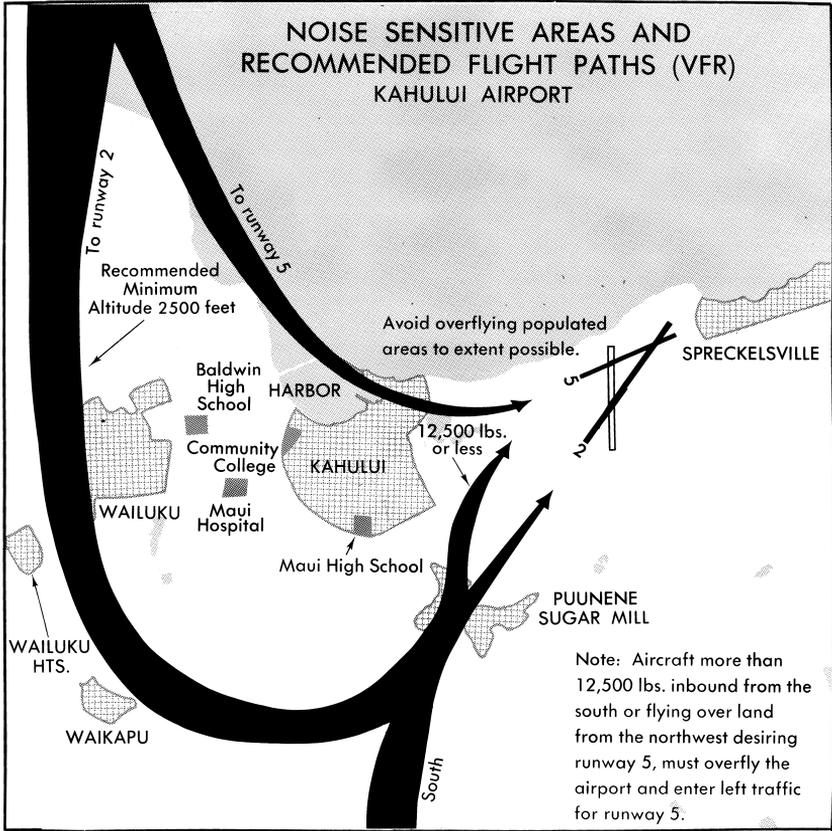

VFR AIRCRAFT PROPOSING TO ENTER KAHULUI AIRPORT CLASS C AIRSPACE ARE REQUIRED TO CONTACT ATC PRIOR TO ENTRY. INITIAL CONTACT: REFER TO CHARTED VFR CHECK POINTS OR 10 DME FROM THE OGG VORTAC. INITIAL CALLS IN CLOSE PROXIMITY TO THE AIRSPACE BOUNDARY MAY RECEIVE INSTRUCTIONS TO "REMAIN CLEAR OF CHARLIE AIRSPACE AND STANDBY." INITIAL CALLS FROM THE MORE DISTANT CHECK POINTS ARE PREFERRED.

FREQUENCIES: NORTH OF V15 - 120.2, SOUTH OF V15 - 119.6.

### KAHULUI, MAUI

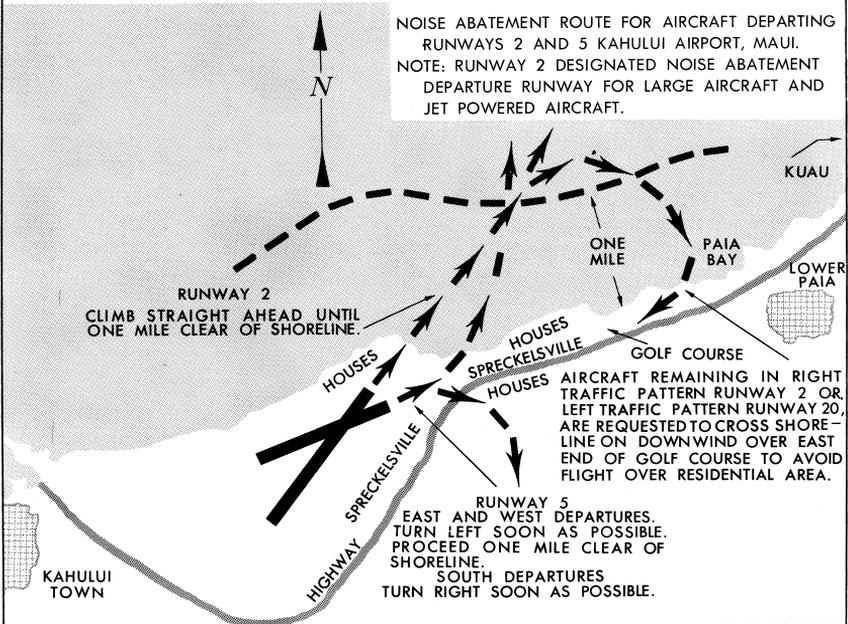

Shown are the most heavily traveled routes for high performance aircraft arriving and departing Kahului Airport, Maui. Light plane pilots flying VFR in these areas should maintain an alert lookout and monitor HCF Approach Control frequency. Aircraft transiting north of the Kahului Airport in VFR conditions are requested to remain at least 8 NM north of the airport at or below 4500 ft. if westbound, 3500 ft. if eastbound, or following the shoreline at or below 2500 ft. and be responsive to routing changes issued by HCF Approach Control or Maui Tower. The area depicted as "ALFA" is a light aircraft local training area. Area is outside Kahului Airport Class C airspace. Aircraft training in area normally operate at or below 3000 ft. and monitor HCF Approach Control.

**INFORMAL RUNWAY USE PROGRAM—KAHULUI ARPT, MAUI**

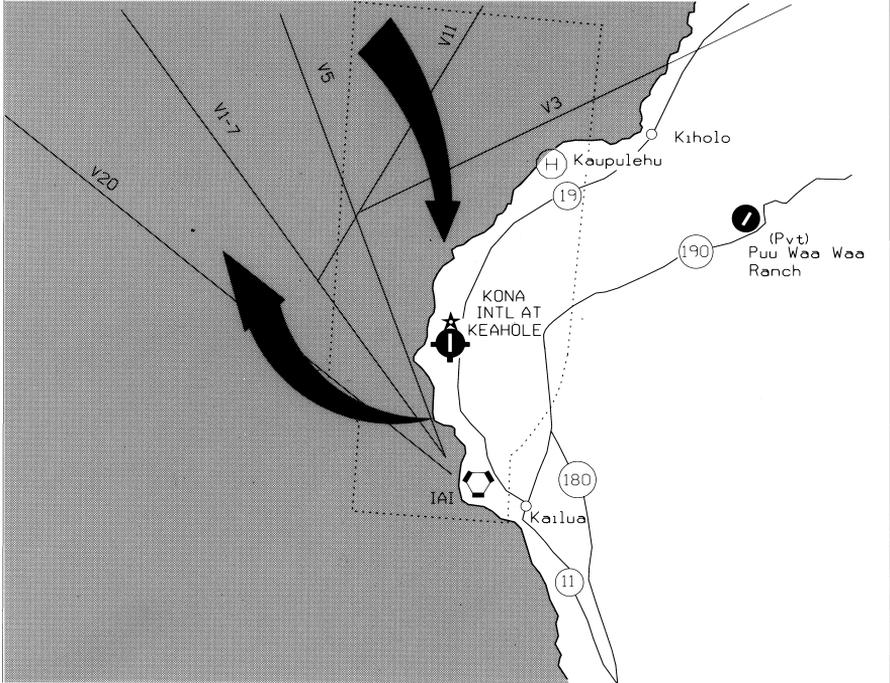

Aircraft noise complaints from Spreckelsville Beach area located adjacent to Kahului Airport have become a matter of serious concern. To alleviate the situation, noise abatement departure runways and flight patterns have been developed. All pilots are urged to follow these procedures to the maximum extent possible consistent with operational and safety requirements. Runway 2 is designated as the noise abatement departure runway for both large and jet powered aircraft. Departure flight pattern runway 2: - Climb straight ahead until one mile clear of shoreline before commencing turns. If takeoff on runway 5 is necessary, both large and jet powered aircraft are requested to: if east or westbound, turn left as soon as possible and proceed one mile clear of shoreline; if southbound, turn right as soon as possible if traffic permits, otherwise turn left.

### KONA INTERNATIONAL AT KEAHOLE AIRPORT, HAWAII

Depicted on this chart are the most heavily traveled routes for high performance aircraft arriving and departing Kona Intl At Keahole Airport, Kona, Hawaii.

General Aviation pilots flying VFR should be extra alert in these areas. Contact Kona Tower on frequency 120.3 for traffic advisories.

-  IFR ARRIVAL/DEPARTURE ROUTES
-  REQUEST CENTER ADVISORIES PRIOR TO TRANSITING AREA 126.5

AIRCRAFT INBOUND TO LIHUE FROM THE EAST CONTACT HONOLULU CENTER 126.5 BY MID-CHANNEL.

VFR AIRCRAFT DEPARTING LIHUE AIRPORT VIA RUNWAY 3/35 EASTBOUND, FLY OUTBOUND ON OR NORTH OF LIH 105 RADIAL UNTIL 25 MILES EAST.

## Bucholz Army Airfield (Kwajalein Atoll) VFR Arrival/Departure RF Avoidance Routing

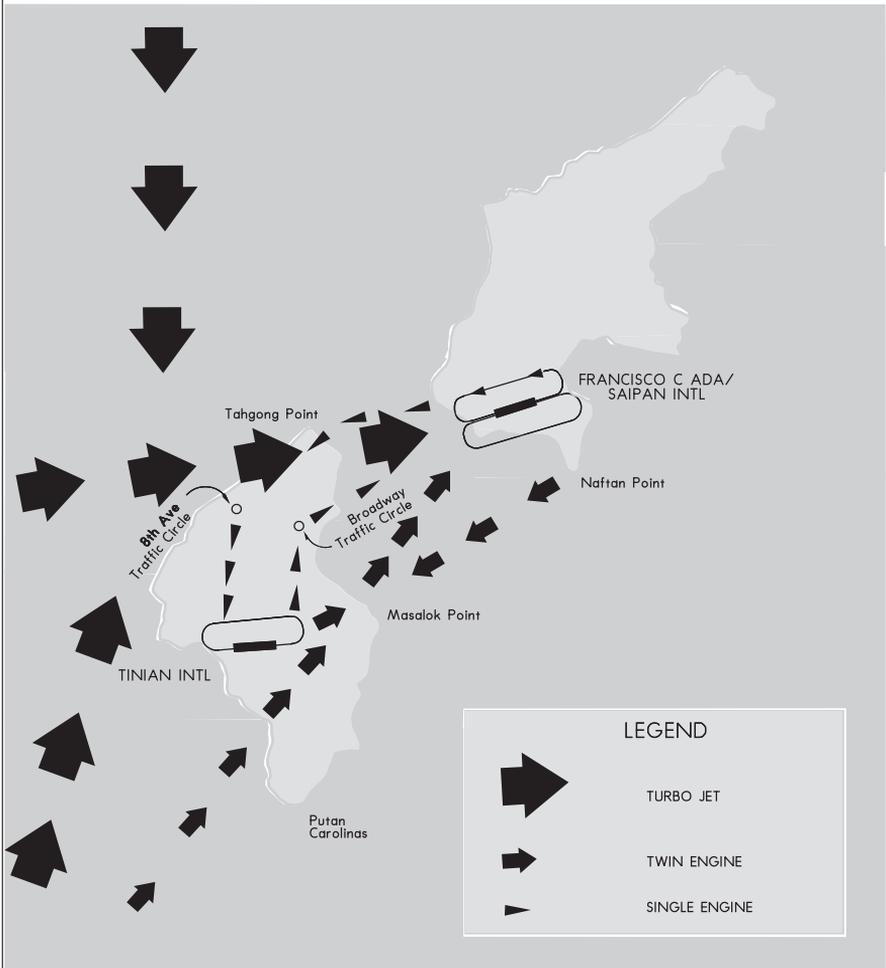

1. VFR arriving or departing aircraft must maintain indicated altitudes in vicinity of Bucholz Army Airfield. A high intensity radiated field can exist in vicinity of Bucholz and the possibility of interference exists if procedure is not followed.
2. Avoid overflight of indicated area at NW corner of Kwajalein.

PREFERRED VFR ROUTING AT SAIPAN AND WEST TINIAN AIRPORTS

Tradewind Condition

(Northeast Winds, Rwy 07, Rwy 08 In Use)

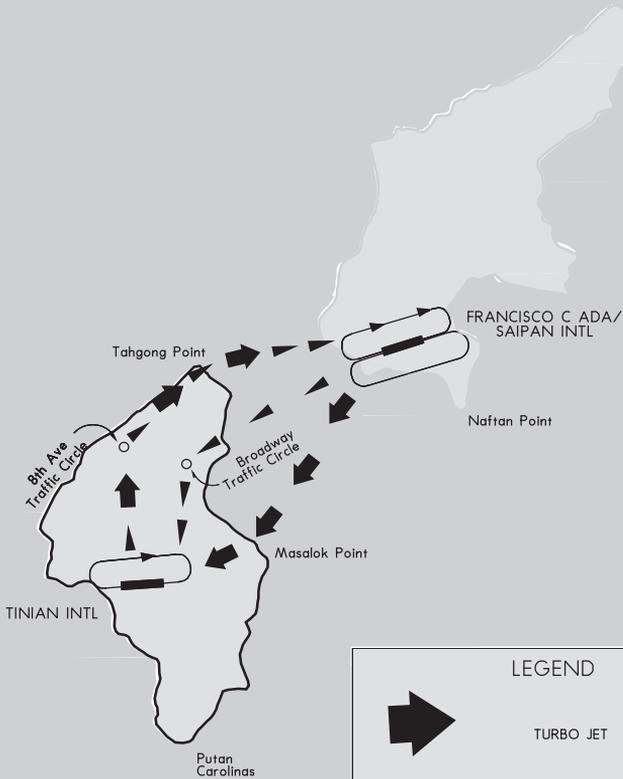

1. VFR turbo jet aircraft arriving Saipan from the southwest should proceed northbound along the west coast of Tinian. VFR turbo jets from the north-northwest should proceed southbound about 10 miles west of Saipan. They should intercept the I-GSN localizer at 10 DME and proceed inbound on the localizer maintaining at or above 2300' above mean sea level until passing KORDY (localizer/7 DME).
2. VFR twin engine aircraft arriving at Saipan from Tinian, Rota/Guam should proceed to Unai Masalok and direct to Puntan Opyan.
3. VFR single engine aircraft arriving Saipan from Tinian should turn left after takeoff and proceed northbound via BROADWAY to the traffic circle, then northeast to Asiga Point, then across Saipan channel for straight-in to Rwy 07.
4. VFR twin engine aircraft from Saipan should make right traffic to Naftan Point, then southwest bound to Puntan Masalok, then enter left traffic for Rwy 08 at West Tinian.
5. VFR single engine aircraft from Saipan should make left traffic downwind to Puntan Agingan, across Saipan channel to Puntan Tahgong (north tip of Tinian), direct to 8th Avenue traffic circle, thence via 8th Avenue to enter left traffic for Rwy 08 at West Tinian.

PREFERRED VFR ROUTING AT SAIPAN AND WEST TINIAN AIRPORTS

Southwest Wind Condition  
(Rwy 25 and Rwy 26 In Use)

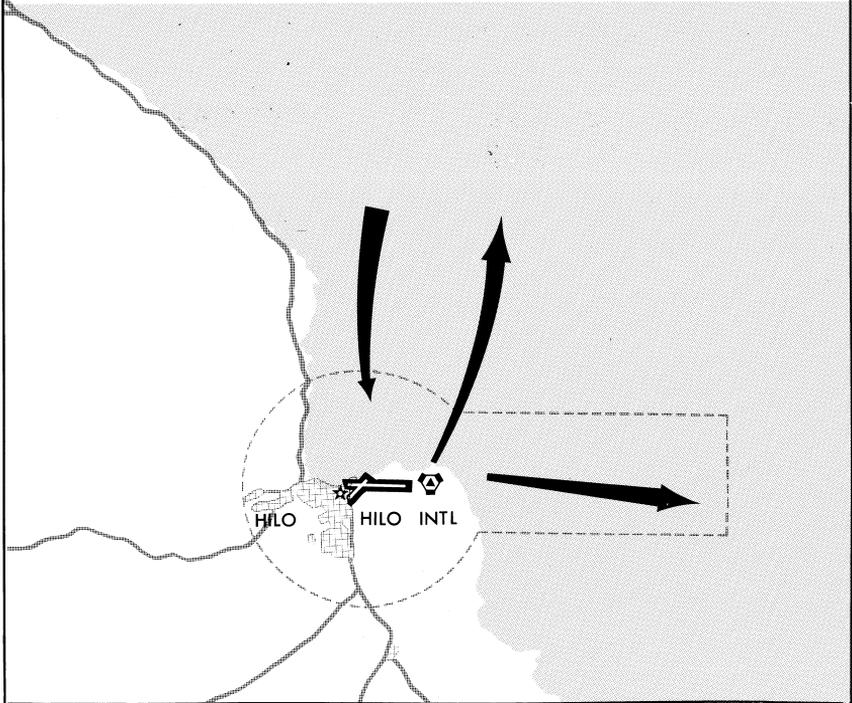

1. VFR single engine aircraft from Saipan Rwy 25 to West Tinian, direct across Saipan Channel to Broadway Traffic Circle, via BROADWAY to enter a right base leg for Rwy 26.
2. VFR twin engine aircraft from Saipan Rwy 25 left turn direct Unai Masalok, make straight-in to Rwy 26 at West Tinian.
3. VFR twin and single engine aircraft from West Tinian, Rwy 26 to Saipan, right turn follow 8th Avenue to Traffic Circle, direct to Puntan Tahgong across Saipan Channel to Agingan Point, enter right downwind for Rwy 25 at Saipan.

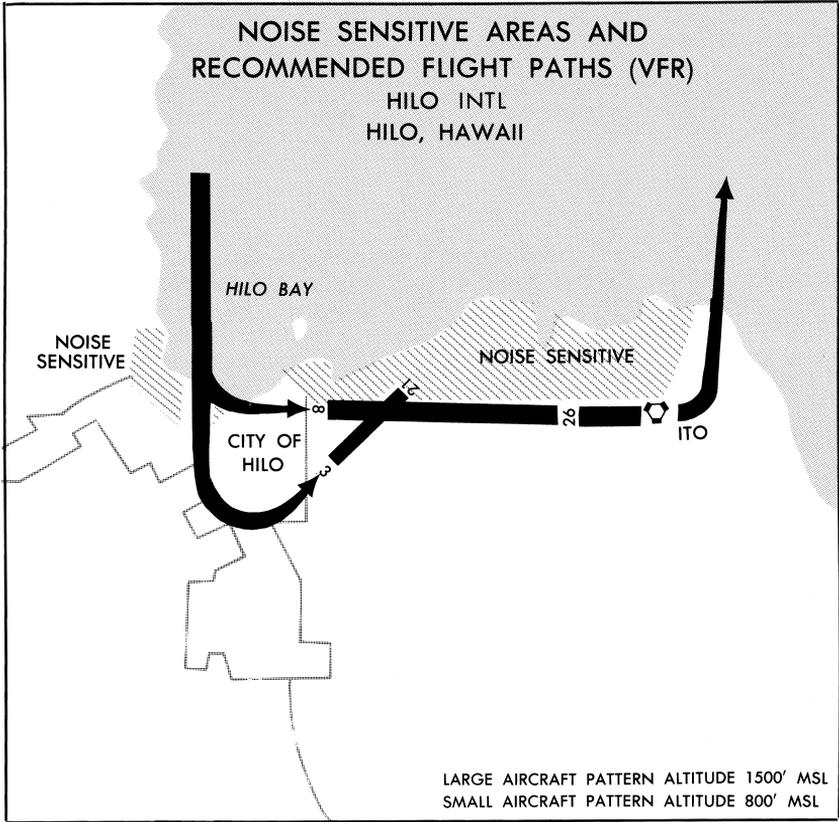

### HILO INTL, HILO

Depicted on this chart are the most heavily traveled routes for high performance aircraft arriving and departing Hilo Intl, Hilo, Hawaii.

General aviation pilots flying VFR should be extra alert in these areas. Contact Hilo Approach Control on frequency 119.7 for traffic advisories.

DILLINGHAM AIRFIELD, OAHU

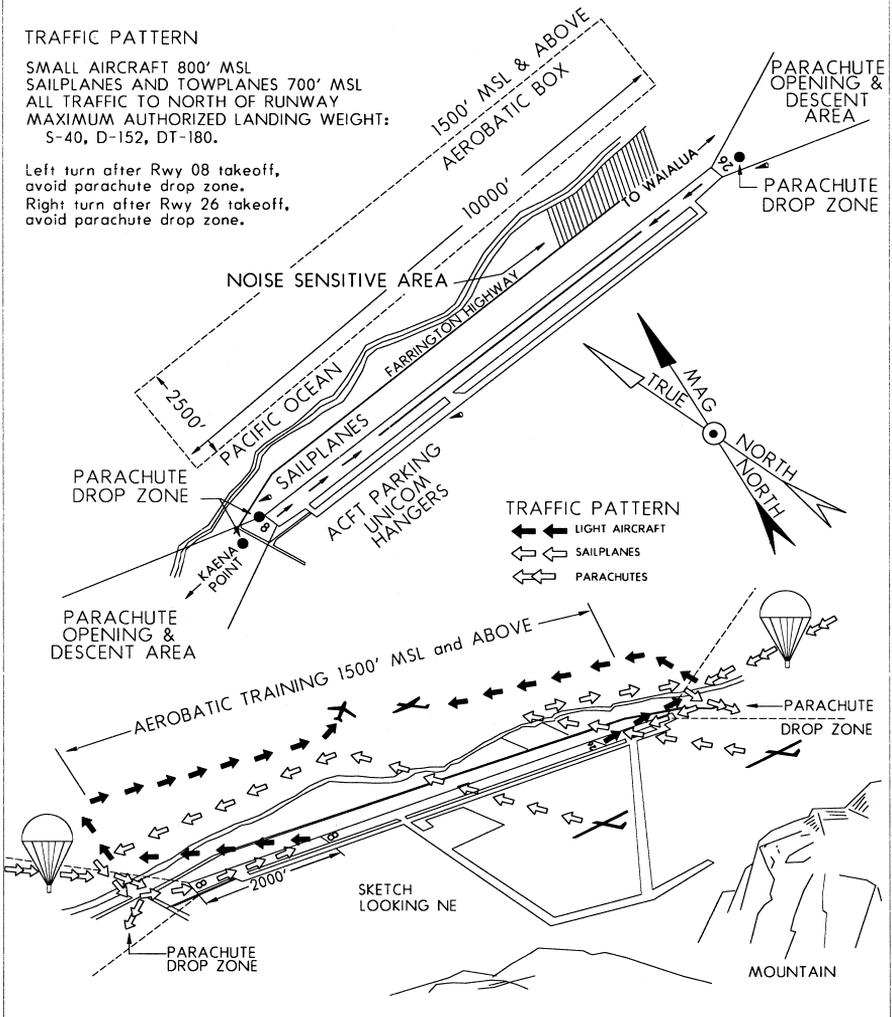

**Glider Operations:** Gliders are normally air-towed and routinely depart the traffic pattern to the South. (Right turn after takeoff Rwy 08, left turn after takeoff Rwy 26.) Gliders normally fly the ridge line to the south of the airport, within 5 NM. Most gliders are not radio equipped. The powered aircraft towing the gliders have radios and routinely use the glider traffic pattern, entering the traffic pattern from the South.

**Sky Dive Operations:** Extensive parachute operations occur daily at 16,000' and below. Parachutists normally exit the aircraft upwind of the airport and during strong winds may exit as far as 3 NM from the drop zone. Parachutes are usually opened between 2,000' and 4,500' altitude, and then flow to the drop zone entering an abbreviated left traffic pattern (Rwy 08) or right traffic pattern (Rwy 26). During light and no wind conditions, the parachutes may open directly above the airport and adjacent beach area.

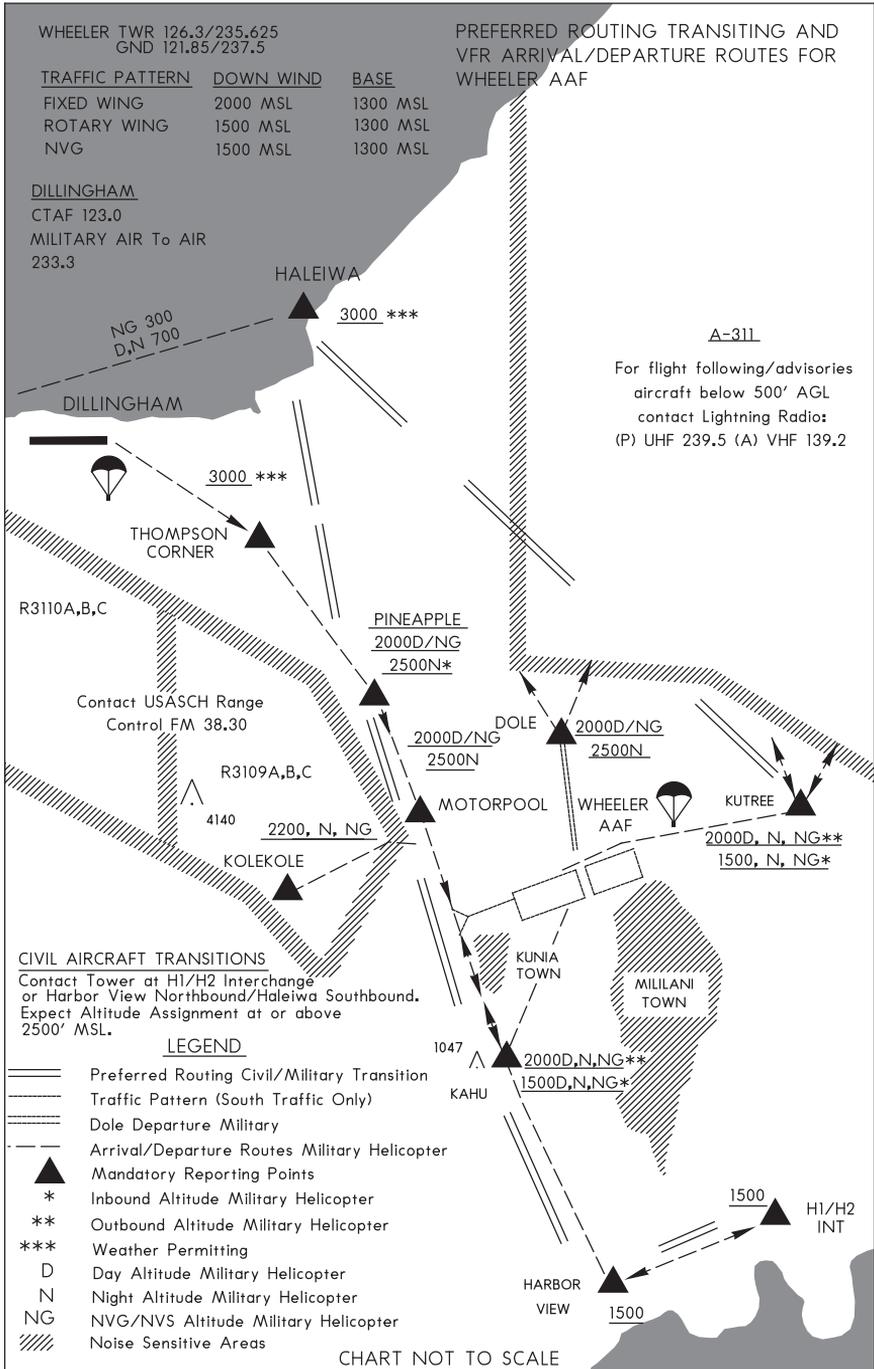

TRAFFIC PATTERN

SMALL AIRCRAFT 800' MSL  
 SAILPLANES AND TOWPLANES 700' MSL  
 ALL TRAFFIC TO NORTH OF RUNWAY  
 MAXIMUM AUTHORIZED LANDING WEIGHT:  
 S-40, D-152, DT-180.

Left turn after Rwy 08 takeoff,  
 avoid parachute drop zone.  
 Right turn after Rwy 26 takeoff,  
 avoid parachute drop zone.

**VOR RECEIVER CHECK**

Airborne and ground checkpoints consist of certified radials that should be received at specific points on the airport surface, or over specific landmarks while airborne in the immediate vicinity of the airport.

Should an error in excess of  $\pm 4^\circ$  be indicated through use of the ground check, or  $\pm 6^\circ$  using the airborne check, IFR flight should not be attempted without first correcting the source of the error. CAUTION: No correction other than the "correction card" figures supplied by the manufacturer should be applied in making these VOR receiver checks.

**AIRBORNE RECEIVER CHECKPOINTS**

STATION	RADIAL	DISTANCE	LOCATION
Pago Pago	060	9.4 NM	Radio tower in center of town on Aunnu Is. 1500' MSL.

**GROUND RECEIVER CHECKPOINTS**

Nimitz	063	3.3 NM	Twy A between Rwy 06L and Rwy 06R.
Pago Pago	242	0.8 NM	On twy Rwy 05.
Wake Island	98	1.3 NM	Runup area Rwy 28.

**VOR TEST FACILITIES (VOT)**

STATION	FREQ.	TYPE VOT FACILITY
Honolulu	111.0	G

**AERONAUTICAL RADIO, INC. (ARINC)****(Services available for aircraft engaged in international flight)**

ARINC using Pacific common air/ground ATC frequency networks shared with other ground stations are listed below. The frequencies in use will depend on the time and conditions which affect radio propagation. International flights on the ground at ANC or within VHF range of the SEA-ANC network that are entering the NOPAC Route System within Anchorage Centers FIR boundary should contact ARINC on VHF 129.4, to obtain primary/secondary HF frequencies and verify SELCAL before entering NOPAC. If unable 129.4, primary/secondary HF frequencies may be obtained from Anchorage ARTCC, but no SELCAL is available.

**WEB-PAGE FOR CURRENT ARINC FREQUENCIES: [Radio.arinc.net](http://Radio.arinc.net)**

Primary and Secondary ARINC frequencies for the Pacific and Atlantic are continuously updated on this webpage.

**CENTRAL WEST PACIFIC (CWP) NETWORK FREQUENCIES**

San Francisco

MWARA—2998, 3455, 4666, 5652, 6532, 8870, 8903, 11384, 13300, 17904 and 21985 kHz

LDOCF (c)—3494, 6640, 8933, 11342, 13348, 17925 and 21964 kHz

**NORTH PACIFIC (NP) NETWORK FREQUENCIES**

San Francisco

MWARA—5628, 6655, 8915, 8951, 10048, 13339, 17946 and 21925 kHz

LDOCF (c)—3494, 6640, 8933, 11342, 13348, 17925 and 21964 kHz

**CENTRAL EAST PACIFIC NETWORK FREQUENCIES**

San Francisco

Extended Range VHF (a)—131.95 MWARA—2869, 3413, 3452, 5547, 5574, 6673, 8843, 8915, 10057, 11282, 13288, 13354, and 21964 kHz

LDOCF (c)—3494, 6640, 8933, 11342, 13348, 17925, and 21964 kHz

Seattle Pre-flight checks (b)—129.4 (SEA-ANC), 131.80 (North West), 131.95 (Central CA), and 128.90 (Southern CA).

**SOUTH PACIFIC (SP) NETWORK FREQUENCIES**

San Francisco

MWARA—3467, 5643, 8867, 13261, and 17904 kHz

LDOC (c)—3494, 6640, 8933, 11342, 13348, 17925, and 21964 kHz

SSB capability available on all HF freqs. (a) Extended Range VHF 131.95. Coverage includes area within approximately 200 NM of the Hawaiian Islands and along the Hawaii-Mainland US tracks extending outward approximately 250 NM from the HNL, SFO, and LAX areas. (b) Call ARINC on VHF to arrange HF checks. 129.40 available for enroute communications on SEA-ANC routes. (c) Users are reminded that all transmissions on the ARINC HF SSB LDOCF must be in the single sideband mode (upper sideband only). Phone patch service will be available as a normal part of the service. Communications are limited to aircraft operational control matters. Public correspondence (personal messages) to/from crew or passengers cannot be accepted. Refer questions to ARINC operations at 1-800-621-0140. Aircraft operating in the Anchorage Arctic CTA/FIR beyond line of sight range of remote control VHF air/ground facilities operated from the Anchorage ARTCC, shall maintain communications with Gander Radio and a listening or SELCAL watch on HF frequencies of the North Atlantic D (NAT D) network (2971 kHz, 4675 kHz, 8891 kHz and 11279 kHz). Additionally, and in view of reported marginal reception of the Honolulu Pacific VOLMET broadcasts in that and adjacent Canadian airspace, Gander Radio can provide Anchorage and Fairbanks surface observations and terminal forecasts to flight crews on request.

**SATCOM VOICE AVAILABLE AS ALTERNATIVE COMMUNICATIONS MEDIUM:**

ARINC has operational use of SATCOM Voice as an acceptable alternative communications medium for oceanic long range ATC communications. It is intended that SATCOM Voice will augment HF radio, in that HF will remain primary for all air-ground-air communications between ARINC Communications Centers and enroute oceanic aircraft.

**Aircraft desiring to contact an ARINC Communications Center should use the SATCOM Short Code to call the appropriate ARINC Center:**

Oceanic Area	Center	SATCOM Short code
Pacific	SFO	436625

ARINC will also utilize SATCOM Voice as a normal operational backup to HF to initiate communications from ground-to-air on the rare occasion when HF communications cannot be established in a timely manner. SATCOM Voice may be used for either ATC or AOC (Aeronautical Operation Control) Communications.

**PARACHUTE JUMPING AREAS**

The following tabulation lists all known jumping sites. Unless otherwise indicated, all activities are conducted during daylight hours and under VFR conditions.

AREA NAME	LOCATION	REMARKS
Agat Bay Drop Zone, GU	244 radial, 11.2 NM, UNZ VORTAC	2 NM radius. Intermittent. Up to 10,000 ft MSL. Military use only.
Anderson Drop Zone, GU	054 radial, 13.5 NM, UNZ VORTAC	2 NM radius. Intermittent. Up to 18,000 ft.
Apra Harbor, GU	265 radial, 4 NM, UNZ VORTAC	2 NM radius. Intermittent. Up to 12,000 ft.
Basilan Drop Zone, HI	326 radial, 16.6 NM, HNL VORTAC	2 NM radius. Intermittent. FSS HNL. Military. Up to 12,500 ft. Honolulu Control Facility ARTCC 126.5.
Dandan Drop Zone, GU	018 radial, 2.4 NM, SN NDB	1 NM radius. Daily. Up to 14,000 ft AGL.
Dillingham, HI	310 radial, 21.5 NM, HNL VORTAC 306 radial, 22.1 NM, HNL VORTAC	3 NM radius. Daily. Up to 16,000 ft. 3 NM radius. Up to 16,000 ft.
East Range/Taro Drop Zone, HI	332 radial, 11.8 NM, HNL VORTAC	0.5 NM radius. Intermittent. Greatest activity on weekends. Military. Maximum altitude 12,500 ft MSL.
Ferguson Hill Drop Zone, GU	040 radial, 9.5 NM, UNZ VORTAC	2 NM radius. Intermittent. Up to 14,000 ft MSL. Military use only.
Guam Intl, GU	080 radial, 5.8 NM, UNZ VORTAC	1 NM radius. Daily. Up to 14,000 ft FSS HNL.
Honolulu, HI Helemano Military Reservation, HI	340 radial, 14.5 NM, HNL VORTAC	0.7 NM radius. Daily. Greatest activity on weekends. Up to 15,000 ft.
Kahuku, HI	351 radial, 22.6 NM, HNL VORTAC	Intermittent. Up to 12,500 ft AGL.
Kanes Drop Zone, HI	341 radial, 22.5 NM, HNL VORTAC	2 NM radius. Intermittent. FSS HNL. Military. Maxium Alt 12,500 ft AGL. Honolulu Control Facility ARTCC 126.5.
Mangilao Drop Zone, GU	090 radial, 4.6 NM, UNZ VORTAC	2 NM radius. Daily. Up to 14,000 ft FSS HNL. Guam Intl Twr 118.7.
Northwest Fld Drop Zone, GU	035 radial, 12 NM, UNZ VORTAC	2 NM radius. Intermittent up to 18,000 ft. Military.
Orote Point, GU	254 radial, 5.5 NM, UNZ VORTAC	2 NM radius. Intermittent. Up to 12,000 ft.
Pokai Bay, HI	285 radial, 17.5 NM, HNL VORTAC	3 NM radius. Intermittent. Up to 3,000 ft.
Port Allen, HI	256 radial, 4.2 NM, SOK VORTAC	2 NM radius. Daily. Max altitude 10,000 ft. Honolulu Control Facility Center 126.5.
Puukapu Drop Zone, HI	345 radial, 22.6 NM, HNL VORTAC	Intermittent. Up to 12,000 ft AGL. FSS HNL.
Tigershark-Inland Drop Zone, HI		1 NM radius. M-F 0700-2200, Sat-Sun, Hol 0900-2200. Up to 7,000 ft. Honolulu Cont Fac (ZHN) 142.45.
Upolu Point Drop Zone, HI		5 NM radius. Daily, all hours. Up to 13,000 ft MSL. Honolulu Control Facility (ZHN) 126.0

**Table of Significant Present, Forecast and Recent Weather - Grouped in categories and used in the order listed below; or as needed in TAF, No Significant Weather.**

<b>QUALIFIER</b>			
<b>Intensity or Proximity</b>			
- Light	"no sign"	Moderate	+ Heavy
VC Vicinity: but not at aerodrome; in U.S. <b>METAR</b> , between 5 and 10SM of the point(s) of observation; in U.S. <b>TAF</b> , 5 to 10SM from center of runway complex (elsewhere within 8000m)			
<b>Descriptor</b>			
MI Shallow	BC Patches	PR Partial	TS Thunderstorm
BL Blowing	SH Showers	DR Drifting	FZ Freezing
<b>WEATHER PHENOMENA</b>			
<b>Precipitation</b>			
DZ Drizzle	RA Rain	SN Snow	SG Snow grains
IC Ice crystals	PL Ice pellets	GR Hail	GS Small hail/snow pellets
UP Unknown precipitation in automated observations			
<b>Obscuration</b>			
BR Mist ( $\geq 5/8SM$ )	FG Fog ( $< 5/8SM$ )	FU Smoke	VA Volcanic ash
SA Sand	HZ Haze	PY Spray	DU Widespread dust
<b>Other</b>			
SQ Squall	SS Sandstorm	DS Duststorm	PO Well developed dust/sand whirls
FC Funnel cloud	+FC tornado/waterspout		

- Explanations in parentheses "( )" indicate different worldwide practices.
- Ceiling is not specified; defined as the lowest broken or overcast layer, or the vertical visibility.
- NWS **TAFs** exclude turbulence, icing & temperature forecasts; NWS **METARs** exclude trend fcsts
- Although not used in US, Ceiling And Visibility OK replaces visibility, weather and clouds if: visibility  $\geq 10$  km; no cloud below 5000 ft (1500 m) or below the highest minimum sector altitude, whichever is greater and no CB; and no precipitation, TS, DS, SS, MIFG, DRDU, DRSA or DRSN.

# PIREP FORM

3 or 4 letter Identifier

\_\_\_\_\_ 1. **UA** \_\_\_\_\_ **UUA** \_\_\_\_\_  
Routine Urgent

2. <b>/OV</b>	Location
3. <b>/TM</b>	Time
4. <b>/FL</b>	Altitude/Flight Level
5. <b>/TP</b>	Aircraft Type
<b>Items 1 through 5 are mandatory for all PIREPs</b>	
6. <b>/SK</b>	Sky Condition
7. <b>/WX</b>	Flight Visibility & Weather
8. <b>/TA</b>	Temperature (Celsius)
9. <b>/WV</b>	Wind
10. <b>/TB</b>	Turbulence
11. <b>/IC</b>	Icing
12. <b>/RM</b>	Remarks

FAA Form 7110-2 (9/19) Supersedes Previous Edition

**Submitting Pilot Weather Reports (PIREPs)**

1. **UA - Routine PIREP / UUA - Urgent PIREP**
2. **/OV - Location:** Use Airport or NAVAID identifiers only.
  - Location can be reported as a single fix, radial DME, or a route segment (Fix- Fix)**Examples: /OV LAX, /OV LAX-SLI120005, /OV PDZ-PSP.**
3. **/TM - Time:** When conditions occurred or were encountered.
  - Use 4 digits in UTC.**Examples: /TM 1645, /TM 0915**
4. **/FL - Altitude/Flight Level**
  - Use 3 digits for hundreds of feet. If not known, use UNKN.**Examples: /FL095, /FL310, /FLUNKN**
5. **/TP - Type aircraft:** Required if reporting Turbulence or Icing
  - No more than 4 characters, use UNKN if the type is not known.**Examples: /TP P28A, /TP RV8, /TP B738, /TP UNKN**
6. **/SK - Sky Condition/Cloud layers:**
  - Report cloud coverage using contractions: FEW, SCT, BKN, OVC, SKC
  - Report bases in hundreds of feet: BKN005, SCT015, OVC200
  - If bases are unknown, use UNKN
  - Report cloud tops in hundreds of feet: TOP120**Examples: /SK BKN035, /SK SCT UNKN-TOP125, /SK OVC095-TOP125/ SKC**
7. **/WX - Weather:** Flight visibility is always reported first. Append FV reported with SM.
  - Report visibility using 2 digits: FV01SM, FV10SM
  - Unrestricted visibility use FV99SM.
  - Use standard weather contractions e.g.: RA, SH, TS, HZ, FG, -, +**Examples: /WX FV01SM +SHRA, /WX FV10 SM -RA BR.**
8. **/TA - Air temperature (Celsius):** Required when reporting icing
  - 2 digits, unless below zero, then prefix digits with M.**Examples: /TA 15, /TA 04 /TA M06**
9. **/WV - Wind:** Direction in 3 digits, speed in 3 or 4 digits, followed by KT.
 **Examples: /WV 270045KT, /WV 080110KT**
10. **/TB - Turbulence:**
  - Report intensity using LGT, MOD, SEV, or EXTRM
  - Report duration using INTMT, OCNL or CONS when reported by pilot.
  - Report type using CAT or CHOP when reported by pilot.
  - Include altitude only if different from /FL.
  - Use ABV or BLO when limits are not defined.
  - Use NEG if turbulence is not encountered.**Examples: /TB OCNL MOD, /TB LGT CHOP, /LGT 060, /TB MOD BLO 090, /TB NEG**
11. **/IC - Icing:**
  - Report intensity using TRACE, LGT, MOD or SEV
  - Report type using RIME, CLR, or MX
  - Include altitude only if different than /FL.
  - Use NEG if icing not encountered.**Examples: /IC LGT-MOD RIME, /IC SEV CLR 028-045, /IC NEG**
12. **/RM - Remarks:** Use to report phenomena that does not fit in any other field.
  - Report the most hazardous element first.
  - Name of geographic location from /OV field fix.**Examples: /RM LLWS +/-15KT SFC-003 DURC RWY22 JFK  
/RM MTN WAVE, /RM DURC, /RM DURC, /RM MULLAN PASS  
/RM BA RWY 02L BA MEDIUM TO POOR 3IN DRY SN OVER COMPACTED**

**FLIGHT SERVICE STATIONS  
NATIONAL WEATHER SERVICE OFFICES**

**Flight Service Station (FSS)** facilities process flight plans and provide flight planning and weather briefing services to pilots. FSS services in the contiguous United States, Hawaii and Puerto Rico, are provided by a contract provider at two large facilities. In Alaska, FSS services are delivered through a network of three hub facilities and 14 satellite facilities, some of which operate part-time and some are seasonal. Because of the interconnectivity between the facilities, all FSS services including radio frequencies are available continuously using published data.

**National Weather Service Office (WSO):** Only general weather information is available on the National Weather Service Office (WSO) telephone numbers listed. NOTE: National Weather Service Offices in the United States are not authorized to provide official Pilot Weather Briefings.

**NATIONAL FSS TELEPHONE NUMBER**

Pilot Weather Briefings ..... 1-800-WX-BRIEF (1-800-992-7433) \*

**OTHER FSS TELEPHONE NUMBERS**

Medevac Flights Only (except in Alaska) ..... 1-877-LIF-GRD3 (1-877-543-4733)

Location	Frequencies
Honolulu, Oahu	117.7T (LNY) 116.9T (ITO) 116.1T (MKK) 115.7T (IAI) 114.8T (HNL) 114.3T (OGG) 113.5T (LIH) 113.3T (MUE) 112.3T (UPP) 115.4T (SOK) 123.6 122.6 122.2 122.1R 255.4 296.7 233.7

Remarks:

FSS—1-800-WX-BRIEF, available 24 hours.

WSO—973-5286, operates 24 hours.

Surface weather reports available on request via air/ground voice communication frequencies.

Best VHF enroute communication coverage due to location of RCO sites:

122.2—Molokai & Lanai routes, 122.6—Lihue routes, 123.6—Maui & Hawaii routes

Volmet broadcast, Honolulu area 00-05 and 30-35, Oakland area 5-10 and 35-40, Anchorage area 55-00 and 25-30, each hr on 2863 6679 8828 13282.

Honolulu Volmet forecast Sequence—Honolulu/Hilo/Guam.

Routine and selected special reports—Honolulu/Hilo/Kahului/Guam.

Terminal forecast—Honolulu/Hilo/Guam.

Hilo	WSO—933-6941, operates 1000-0200Z.
Lihue	WSO—245-2420, operates 1000-0200Z.

R—Receive only T—Transmit only

Emerg Freq. 121.5 and 243.0 are available at most stations and are not tabulated.

\* Outer Islands may be required to dial LD 808-833-8440 for FSS weather briefing and flight planning svc.

\* Facilities can be contacted through the Rgnl Duty Officer during non-business hours.

**MILITARY TRAINING ROUTES**

The DOD Flight Information Publication AP/1B provides textual and graphic descriptions and operating instructions for all military training routes (IR, VR, SR) and refueling tracks/anchors. Complete and more comprehensive information relative to policy and procedures for IRs and VRs is published in FAA Handbook 7610.4 (Special Military Operations) which is agreed to by the DOD and therefore directive for all military flight operations. The AP/1B is the official source of route data for military users.

1. National security depends largely on the deterrent effect of our airborne military forces. To be proficient, the military services must train in a wide range of airborne tactics. One phase of this training involves "low level" combat tactics. The required maneuvers and high speeds are such that they may occasionally make the see-and-avoid aspect of VFR flight more difficult without increased vigilance in areas containing such operations. In an effort to ensure the greatest practical level of safety for all flight operations, the Military Training Route program was conceived.
2. The Military Training Routes (MTR) program is a joint venture by the FAA and the Department of Defense (DOD). MTR routes are mutually developed for use by the military for the purpose of conducting low-altitude, high-speed training. There are IFR (IR) routes located in the Marianas Islands. These routes are flown from FL200 or as assigned by ATC to 1,000 feet MSL. Points of entry/exit and altitudes along the route are charted for use in preflight pilot briefings. Pilots should review this information to acquaint themselves with these routes that are located along their route of flight and in the vicinity of airports on Guam, Rota, Tinian and Saipan.
3. Non participating aircraft are not prohibited from flying within an MTR, however, extreme vigilance should be exercised when conducting flight through or near these routes. Pilots should contact Guam CERAP or Saipan radio to obtain information on route usage in their vicinity.
4. Marianas Islands Military Training Routes are also published in the Mariana Islands Sectional Aeronautical Chart, the DOD Flight Information Publication (enroute). Chart 1, Panel B and the DOD FLIP are planning document AP/3.

## HOT SPOTS

An "Airport surface hot spot" is a location on an aerodrome movement area with a history or potential risk of collision or runway incursion, and where heightened attention by pilots/drivers is necessary.

A "hot spot" is a runway safety related problem area on an airport that presents increased risk during surface operations. Typically it is a complex or confusing taxiway/taxiway or taxiway/runway intersection. The area of increased risk has either a history of or potential for runway incursions or surface incidents, due to a variety of causes, such as but not limited to: airport layout, traffic flow, airport marking, signage and lighting, situational awareness, and training. Hot spots are depicted on airport diagrams as open circles or polygons designated as "HS 1", "HS 2", etc. and tabulated in the list below with a brief description of each hot spot. Hot spots will remain charted on airport diagrams until such time the increased risk has been reduced or eliminated.

CITY/AIRPORT	HOT SPOT	DESCRIPTION
<b>HAWAII</b>		
HONOLULU		
DANIEL K INOUYE INTL (HNL) (PHNL)	HS 1	Rwy 04R/Rwy 04L thresholds: wrong sfc ldg risk. Pilots cleared to land Rwy 04L or 04R sometimes land on the wrong rwy.
	HS 2	Acft ldg Rwy 04R and exiting left onto Twy K sometimes fail to hold short of Rwy 04L-22R and Rwy 08L-26R.
	HS 3	Acft proceeding north on Twy E and instructed to turn left onto Twy B sometimes miss the turn onto Twy B and proceed onto Rwy 08L-26R without clearance.
	HS 4	Twy A, Twy V, Twy T, Twy RB, and Twy M all converge at or in close proximity to Rwy 08L.
	HS 5	Area not visible from twr.
	HS 6	Minimal dist btn rwy hold short lines btn Rwy 04L-22R/Rwy 04R-22L. Plan to hold short of the parll rwy. ATC is aware the acft tail is encroaching the landed rwy.
KAHULUI		
KAHULUI (OGG) (PHOG)	HS 1	Acft ldg Rwy 05 and instructed to exit on Twy A with a left turn onto Twy F to the east ramp, sometimes turn left onto Twy G by mistake.
	HS 2	Rwy holding position marking Rwy 02-20 located at the intersection of Twy E and the ramp.
	HS 3	Acft ldg Rwy 02 that are instructed to exit left on Twy A sometimes cross Rwy 05-23 wo clnc.
KAUNAKAKAI		
MOLOKAI (MKK) (PHMK)	HS 1	Area not visible from ctl twr.

16. COLOR OF AIRCRAFT		CIVIL AIRCRAFT PILOTS: FAR Part 91 requires you file an IFR flight plan to operate under instrument flight rules in controlled airspace. Failure to file could result in a civil penalty not to exceed \$1,000 for each violation (Section 901 of the Federal Aviation Act of 1958, as amended). Filing of a VFR flight plan is recommended as a good operating practice. See also Part 99 for requirements concerning DVFR flight plans.				

FAA Form 7233-1 (8-82)

CLOSE VFR FLIGHT PLAN WITH \_\_\_\_\_ FSS ON ARRIVAL

**FLIGHT PLANS**

**1. Requirement for Flight Plan Filing**

ICAO Annex 2 requires a flight plan to be submitted for any flight across international borders. This permits en route stations and the destination station to render better service by having prior knowledge of flights. Aircraft on VFR flight plans must make regular position reports to ATC for flight following, weather safety advisories, and prompt search and rescue action in the proper area if necessary. Flight plans may be submitted to Flight Service through [www.1800wxbrief.com](http://www.1800wxbrief.com), any flight planning application, or by calling 1-800-WX-BRIEF. Aircraft radio may be used if no other means are available. If Flight Service cannot be reached, ARINC will relay flight plans received via HF radio to Oakland ARTCC.

**2. Flight Plan Filing Time Requirement**

Due to the critical workload in the processing of flight data and the increased time in transit due to the volume of messages it is strongly recommended that ICAO flight plan messages be filed and transmitted to the appropriate Control Center not less than one hour before estimated time of departure.

**3. Filing Mach Number in Flight Plan**

- a. For oceanic departures, Mach speed and flight level should be specified in the flight plan in one of the following ways:
- b. Preferred method: Mach number and flight level immediately preceding the initial domestic portion of the route of flight.

Example of Item 15 of ICAO Flight Plan for Honolulu to San Francisco:  
M084F340 MOLOKAI 3 CLUTS R465 CLUKK/N0494F360 OSI

**4. Filing an EET in Flight Plan**

In accordance with ICAO DOC-4444, flight plans with routes entering the Oakland OCA/FIR (KZAK), must contain the elapsed time (EET) in field 18, an entry point for KZAK and an estimated time. It is not mandatory to file the boundary crossing point in filed 15 of the route of flight but it is permitted.

---

### ALTIMETER SETTING OAKLAND OCEANIC FIR

1. Each person operating an aircraft shall maintain the cruising altitude or flight level of the aircraft by reference to an altimeter that is set:
2. Within the Hawaiian Islands domestic area, within 100 NM of the Nimitz VORTAC, and within 35 NM of Saipan NDB:
  - a. At FL180 and above, to standard altimeter setting 29.92 inches of mercury (QNE).
  - b. Below 18,000' MSL, to current altimeter setting (QNH).
3. Within all other areas of the Oakland OCA/FIR, at or above 5,500' MSL, to standard altimeter setting 29.92 inches of mercury (QNE).

---

### AIR TRAFFIC CONTROL RADAR BEACON SYSTEM (ATCRBS)

1. ATCRBS is similar to and compatible with military coded radar beacon equipment. Civil Mode A is identical to military Mode 3. The Radar Beacon Code Employment Plan is designed to minimize the number of code changes and to enable a controller to display and quickly identify only those Mode 3/A responses from aircraft operating within his area of jurisdiction.
2. Accordingly, pilots of aircraft equipped with a functioning coded radar beacon transponder, and operating on an IFR flight plan in an area covered by radar, will be instructed by ATC to reply on the appropriate code. Flights assigned a particular code by ATC are expected to remain on that code until further advised by ATC. (See also Beacon Code Requirements within this section.) Within the Hawaiian Islands domestic area and the Guam ADIZ, pilots of aircraft equipped with functioning coded radar beacon transponder will adjust their transponders to reply on Mode 3/A codes specified below, unless a different code has been assigned by advance coordination or via direct communication with ATC. If possible, coordination shall be effected with the appropriate ATC facility when special military operations preclude compliance with this requirement.
  - a. Code 4000 – For all operations within restricted/warning areas.
  - b. Code 1200 – For all VFR operations not being provided radar services by ATC facilities.
3. Should the pilot of an aircraft equipped with a coded radar beacon transponder experience a loss of two-way radio capability he should:
  - a. Adjust his transponder to reply on Mode A/3, Code 7700 for a period of 1 minute.
  - b. Change to Code 7600 and remain on 7600 for period of 15 minutes or the remainder of flight, whichever occurs first.
  - c. Repeat steps a and b, as practicable.
4. The pilot should understand that he might not be in an area of radar coverage. Many radar facilities are not presently equipped to automatically display Code 7600 and will interrogate 7600 only when the aircraft is under direct radar control at the time of radio failure. Replying on Code 7700 first increases the probability of early detection of a radio failure condition.

---

### OCEANIC POSITION REPORTING PROCEDURES OAKLAND OCEANIC FIR

#### 1. GENERAL

For non ADS equipped aircraft, any waypoint filed in the route of flight (Item 15 of the ICAO flight plan) must be reported as a position report whether the filed waypoint is compulsory or not. If a non-compulsory waypoint is not filed in item 15, it does not need to be reported.

#### 2. POSITION REPORTS

- a. When operating on a published ATS Route or a temporary route established by NOTAM, report and estimate the designated reporting points using the specified waypoint names or geographic coordinates as specified in the NOTAM.
- b. When operating on a random route:
  - (1) Flights whose tracks are predominantly east and west shall report over each 5 degrees or 10 degrees (10 degrees will be used if the speed of the aircraft is such that 10 degrees will be traversed within 80 minutes or less) meridian longitude extending east and west from 180 degrees.
  - (2) Flights whose tracks are predominantly north and south shall report over each 5 degrees or 10 degrees (10 degrees if traversed within 80 minutes) parallel of latitude extending north and south of the equator.
- c. ATC may require specific flights to report more frequently than each 5 degrees for aircraft with slow ground speeds.
- d. Position reports shall be transmitted at the time of crossing the designated reporting point or as soon thereafter as possible.

#### 3. CONTENTS OF POSITION REPORT

Position reports shall include information on present position, estimated next position, and ensuing position in sequence as indicated below.

- a. PRESENT POSITION – Information shall include:
  - (1) The word "position."
  - (2) Aircraft identification.
  - (3) Reporting point name, or if not named:
    - (a) Latitude (2 digits or more) and,
    - (b) Longitude (3 digits or more).
- b. Time over reporting point (4 digits UTC).

- c. Altitude (Flight Level). When forwarding an altitude report within the Oakland OCA/FIR, pilots should report their present altitude and their assigned altitude exactly as cleared if the present and assigned altitudes differ. Aircraft assigned a block altitude must report their current altitude and the assigned block altitude. A restriction to cross a point at an altitude is not a block altitude assignment and should not be reported as a block of altitudes.
- d. ESTIMATED NEXT POSITION
  - (1) Reporting point name, or if not named, latitude and longitude as in a.3 above and,
  - (2) Estimated time over next position (4 digits UTC).
- e. ENSUING FIX
  - (1) Name only of the next succeeding fix whether compulsory or not, or if not named, latitude and longitude as in a.3 above.

#### 4. WEATHER REPORTS

- a. Weather reports shall be included as provided in Section 3 of Standard AIREP Form by all flights unless exempted from weather reporting by the Weather Service and/or ATC.

#### 5. ADHERENCE TO ATC APPROVED ROUTE

- a. If an aircraft, notwithstanding all action taken to adhere to the route specified in the ATC clearance, inadvertently deviates from this route, action shall be taken to regain it as soon as reasonable and not further ahead than 200 nautical miles from the DR position at which the heading was altered to regain the route specified in the ATC clearance. Action to regain this route shall not be delayed in anticipation of obtaining a requested re-clearance.

#### 6. EXCEPTIONS TO POSITION REPORTING PROCEDURES

- a. Within Oakland OCA/FIR, no 5 degree report need be made that would fall within 100 NM of Guam. Aircraft cleared via terminal area routes report compulsory reporting fixes. Other aircraft report 100 NM from Nimitz VORTAC. Where other island destinations within the Oakland Oceanic FIR are not more than one-degree latitude-longitude from a 5 degrees fixed line reporting point, the ETA and arrival report may be substituted in lieu of the adjacent fixed line report.
- b. To the east of the Hawaiian Islands it will not be necessary to report the 155 degree west position if position will be reported at the entry/exit fixes on the Honolulu Control Facility boundary. To the west of the Hawaiian Islands, the 160 degree west need not be reported.

#### 7. POSITION REPORTS OVER OAKLAND OCEANIC OCA/FIR BOUNDARIES

- a. Aircraft entering the Oakland OCA/FIR are requested to forward boundary position reports via ARINC or CPDLC as follows:
    - (1) Boundary fixes that are compulsory reporting points.
    - (2) Filed fixes when they coincide with the FIR Boundary.
    - (3) The boundary between the Manila, Ujung Pandang, Port Moresby and Nauru FIR's and the Oakland OCA/FIR.
    - (4) The boundary of the Open Area Uncontrolled Airspace west of Mazatlan ACC and the Oakland OCA/FIR along 120 degrees west longitude.
    - (5) Outbound from the Guam CERAP area at the 250 NM ARC from the UNZ VORTAC.
    - (6) Eastbound PACOTS Flights should report only those fixes detailed in the published route.
    - (7) When requested by ATC.
  - b. Aircraft leaving the lateral limits of the Oakland OCA/FIR and entering uncontrolled airspace shall forward the time over the boundary outbound.
-

**SPECIAL PROCEDURES FOR IN-FLIGHT CONTINGENCIES IN OCEANIC AIRSPACE****1. INTRODUCTION**

- a. Although all possible contingencies cannot be covered, these procedures provide for the more frequent cases such as:
- (1) Inability to maintain assigned flight level due to meteorological conditions, aircraft performance or pressurization failure;
  - (2) En route diversion across the prevailing traffic flow; and
  - (3) Loss of, or significant reduction in, the required navigation capability when operating in airspace where the navigation performance accuracy is a prerequisite to the safe conduct of flight operations.
- b. These procedures are applicable primarily when rapid descent and/or turn-back or diversion is required. The pilot's judgment shall determine the sequence of actions to be taken, having regard to the prevailing circumstances. Air traffic control shall render all possible assistance.

**2. GENERAL PROCEDURES**

- a. If an aircraft is unable to continue the flight in accordance with its ATC clearance, and/or an aircraft is unable to maintain the navigation performance accuracy specified for the airspace, a revised clearance shall be obtained, whenever possible, prior to initiating any action.
- b. The radiotelephony distress signal (MAYDAY) or urgency signal (PAN PAN) preferably spoken three times shall be used as appropriate. Subsequent ATC action with respect to that aircraft shall be based on the intentions of the pilot and the overall air traffic situation.
- c. If prior clearance cannot be obtained, an ATC clearance shall be obtained at the earliest possible time and, until a revised clearance is received, the pilot shall:
- (1) Leave the assigned route or track by initially turning 45 degrees\* to the right or to the left. When possible, the direction of the turn should be determined by the position of the aircraft relative to any organized route or track system. Other factors which may affect the direction of the turn are:
    - (a) The direction to an alternate airport, terrain clearance;
    - (b) Any lateral offset being flown, and the flight levels allocated on adjacent routes or tracks.

\*FAA EXPLANATORY NOTE: A turn of less than or greater than 90 degrees may be required, depending on the type of contingency and whether the pilot intends to continue in the same direction or reverse course.

- (2) Establish communications with and alert nearby aircraft by broadcasting, at suitable intervals: aircraft identification, flight level, position (including the ATS route designator or the track code, as appropriate) and intentions on the frequency in use and on 121.5 MHz (or, as a back-up, on the inter-pilot air-to-air frequency 123.45 MHz);
  - (3) Maintain a watch for conflicting traffic both visually and by reference to ACAS (TCAS) (if equipped);
  - (4) Turn on all aircraft exterior lights (commensurate with appropriate operating limitations);
  - (5) Keep the SSR transponder on at all times;
  - (6) Take action as necessary to ensure the safety of the aircraft; and
  - (7) Following the turn, the pilot should:
    - (a) If unable to maintain the assigned flight level, initially minimize the rate of descent to the extent that is operationally feasible;
    - (b) Take account of other aircraft being laterally offset from its track;
    - (c) Acquire and maintain in either direction a track laterally separated by 28 km (15 NM) from the assigned route; and
    - (d) Once established on the offset track, climb or descend to select a flight level which differs from those normally used by 150 m (500 ft);
- d. When leaving the assigned track to acquire and maintain the track laterally separated by 28 km (15 NM), the flight crew, should, where practicable, avoid overshooting the track to be acquired, particularly in airspace where a 55.5 km (30 NM) lateral separation minimum is applied.

**3. EXTENDED RANGE OPERATIONS (ETOPS) BY AIRCRAFT WITH TWO-TURBINE POWER-UNITS)**

If the contingency procedures are employed by a twin-engine aircraft as a result of an engine shutdown or failure of an ETOPS critical system, the pilot should advise ATC as soon as practicable of the situation, reminding ATC of the type of aircraft involved, and request expeditious handling.

**4. WEATHER DEVIATION PROCEDURES FOR OCEANIC-CONTROLLED AIRSPACE****a. General**

- (1) The following procedures are intended to provide guidance. All possible circumstances cannot be covered. The pilot's judgment shall ultimately determine the sequence of actions taken and ATC shall render all possible assistance.
- (2) If the aircraft is required to deviate from track to avoid weather and prior clearance cannot be obtained, an air traffic control clearance shall be obtained at the earliest possible time. In the meantime, the aircraft shall follow the procedures detailed in paragraph f. below.
- (3) The pilot shall advise ATC when weather deviation is no longer required, or when a weather deviation has been completed and the aircraft has returned to the centerline of its cleared route.

**b. Obtaining Priority from ATC when Weather Deviation Is Required**

- (1) When the pilot initiates communications with ATC, rapid response may be obtained by stating "WEATHER DEVIATION REQUIRED" to indicate that priority is desired on the frequency and for ATC response.
- (2) The pilot still retains the option of initiating the communications using the urgency call "PAN PAN PAN (*preferably spoken three times*)" to alert all listening parties to a special handling condition which will receive ATC priority for issuance of a clearance or assistance.

**c. Actions To Be Taken when Controller-Pilot Communications Are Established**

- (1) The pilot notifies ATC and requests clearance to deviate from track, advising, when possible, the extent of the deviation expected. ATC will take one of the following actions:
  - (a) If there is no conflicting traffic in the horizontal dimension, ATC will issue clearance to deviate from track, or
  - (b) If there is conflicting traffic in the horizontal dimension, ATC will separate aircraft by establishing vertical separation, or

- d. If there is conflicting traffic in the horizontal dimension and ATC is unable to establish vertical separation, ATC shall:
- (1) Advise the pilot unable to issue clearance for requested deviation.
  - (2) Advise pilot of conflicting traffic.
  - (3) Request pilot's intentions.
  - (4) PHRASEOLOGY-- "Unable (requested deviation), traffic is (call sign, position, altitude, direction), advise intentions."
- e. The pilot will take the following actions:
- (1) Advise ATC of intentions by the most expeditious means available.
  - (2) Comply with air traffic control clearance issued, or
  - (3) Execute the procedures detailed in paragraph 4.f below.
  - (4) If necessary, establish voice communications with ATC to expedite dialogue on the situation.
- f. Actions To Be Taken if a Revised Air Traffic Control Clearance Cannot Be Obtained:
- (1) The pilot shall take the actions listed below under the provision that the pilot may deviate from rules of the air (e.g., the requirement to operate on the cleared route or track unless otherwise directed by ATC), when it is absolutely necessary in the interests of safety to do so.
  - (2) If a revised air traffic control clearance cannot be obtained and deviation from track is required to avoid weather, the pilot shall take the following actions:
    - (a) If possible, deviate away from an organized track or route system.

Route center line track	Deviations >10 NM	Level change
EAST (000-179 magnetic)	LEFT	DESCENT 300 ft
	RIGHT	CLIMB 300 ft
WEST (180-359 magnetic)	LEFT	CLIMB 300 ft
	RIGHT	DESCEND 300 ft

NOTE: Subparagraphs 2b and 2c below call for the pilot to: broadcast aircraft position and pilot's intentions, identify conflicting traffic and communicate air-to-air with near-by aircraft. If the pilot determines that there is another aircraft at or near the same FL with which his aircraft might conflict, then the pilot is expected to adjust the path of the aircraft, as necessary, to avoid conflict.

- (b) Establish communication with and alert nearby aircraft by broadcasting, at suitable intervals: flight identification, flight level, aircraft position (including the ATS route designator or the track code), and intentions (including the magnitude of the deviation expected) on the frequency in use, as well as on frequency 121.5 MHz (or, as a back-up, the VHF inter-pilot air-to-air frequency 123.45).
- (c) Watch for conflicting traffic both visually and by reference to ACAS (if equipped).
- (d) Turn on all aircraft exterior lights (commensurate with appropriate operating limitations).
- (e) For deviations of less than 10 NM, aircraft should remain at the level assigned by ATC.
- (f) For deviations of greater than 10 NM, when the aircraft is approximately 10 NM from track, initiate a level change based on the criteria in the table above.
- (g) If contact was not established prior to deviating, continue to attempt to contact ATC to obtain a clearance. If contact was established, continue to keep ATC advised of intentions and obtain essential traffic information.
- (h) When returning to track, be at its assigned flight level, when the aircraft is within approximately 10 NM of centerline.

---

## CLIMB TIMES/CHANGE OF FLIGHT LEVEL OAKLAND OCEANIC FIR

### 1. CLIMB TIMES

A distinction should be made between the time at which higher flight level is requested and the time at which the next higher flight level can be accepted.

### 2. CHANGE OF FLIGHT LEVEL

- a. Pilots are advised that when an aircraft is proceeding from one Oceanic Control Area to another at the time that a change of flight level is desired, coordination must be effected between the Oceanic Control Centers concerned before an ATC clearance can be issued.
- b. A flight level request shown on a filed flight plan does not constitute authority for an aircraft to change flight level; a specific ATC clearance for the flight level change is required.

---

## CHANGE OF TRUE AIRSPEED/MACH NUMBER OAKLAND OCEANIC FIR

### CHANGE OF SPEED

Pilots must inform ATC prior to making a planned en route speed change, as indicated in Item 15 of a filed flight plan. Additionally, pilots are reminded that such changes are not authorized when a specific ATC clearance assigning a Mach number to maintain has been issued.

**ATTN ALL AIRCREWS:** New procedural requirement for flights operating in Oakland Oceanic Control Area (KZAK). In order to support cost index or econ speeds and maintain ATC separation spacing, aircrews are required to use the following procedures in the KZAK FIR.

A pilot must inform ATS via voice or CPDLC each time the cruising Mach number varies or is expected to vary by a value equal to or greater than 0.02 Mach from:

- (1) the Mach number at FIR entry; or
  - (2) any subsequent speed change notified to ATC in flight.
-

---

## CLASS C AIRSPACE

### 1. CLASS C Dimensions

- a. CLASS C (a basic standard design with minor site specific variations). CLASS C airspace consists of two circles, both centered on the primary/CLASS C airport. The inner circle has a radius of 5 NM. The outer circle has a radius of 10 NM. The airspace of the inner circle extends from the surface of CLASS C airport up to 4,000 feet above the airport. The airspace area between the 5 and 10 NM rings begins at a height 1,200 feet AGL and extends to the same altitude cap as the inner circle.
- b. OUTER AREA. The normal radius will be 20 NM with some variations based on site specific requirements. The outer area extends outward from the primary/CLASS C airport and extends from the lower limits of radar/radio coverage up to the ceiling of the approach control's delegated airspace, excluding CLASS C and other airspace as appropriate.

### 2. CLASS C is Regulatory Airspace

#### a. ARRIVALS AND OVERFLIGHTS:

- (1) Two-way radio communications must be established with ATC facility having jurisdiction over CLASS C airspace prior to entry and thereafter as instructed by ATC.

#### b. DEPARTURES:

- (1) Primary or Satellite Airport with an operating control tower: Two-way radio communications must be established and maintained with the control tower in accordance with Federal Aviation Regulations (FAR) 91.129 and thereafter as instructed by ATC.
- (2) Satellite Airports without an operating control tower: Two-way radio communications must be established as soon as practicable after departing with the ATC facility having jurisdiction over CLASS C and thereafter as instructed by ATC.

#### c. ATC SERVICES WITHIN CLASS C AIRSPACE:

- (1) Sequencing of all arriving aircraft to the primary/CLASS C airport.
- (2) Standard IFR separation between FR aircraft.
- (3) Between IFR and VFR aircraft – traffic advisories and conflict resolution so that radar targets do not touch, or 500 feet vertical separation.
- (4) Between VFR aircraft – traffic advisories and as appropriate, safety alerts.

#### d. CLASS C AIRSPACE REQUIREMENTS:

- (1) Student pilot or better
- (2) Two-way radio
- (3) Mode C transponder

NOTE: For additional information see the AIM/FARS.

---

## EMERGENCY SECURITY CONTROL OF AIR TRAFFIC (ESCAT) PROCEDURES

1. The ESCAT Plan contains responsibilities of military authorities, Federal Aviation Administration, and Federal Communications Commission in regard to actions to be taken for security control of air traffic and air navigation aids in defense of the United States during defense emergencies. The ESCAT Plan provides that, in the defense of the United States during defense emergencies, the military will direct actions to be taken in regard to landing, grounding, diversion or dispersal of aircraft, and in regard to the control of air navigation aids.
  2. At the time that ESCAT is implemented, ATC facilities will broadcast instructions received from the military over available ATC frequencies. Depending on instructions received from the military, VFR flights may be directed to land at the nearest available airport; IFR flights will be expected to proceed as directed by ATC. Pilots on the ground may be required to file a flight plan and obtain approval (through FAA) before conducting flight operations.
  3. In view of the above, all pilots should guard an ATC or Flight Service Station frequency at all times while conducting flight operations.
-

---

**NATIONAL SECURITY****1. General**

- a. National security in the control of air traffic is governed by Title 14 of the U.S. Code of Federal Regulations, Part 99.
- b. All aircraft entering domestic U.S. airspace from points outside must provide for identification prior to entry. To facilitate early aircraft identification of all aircraft in the vicinity of U.S.–International airspace boundaries, Air Defense Identification Zones (ADIZ) have been established. (See Figures 1–4–1, 1–4–2, 1–4–3, and 1–4–4.)
- c. Operational requirement for aircraft entering or flying within the ADIZ areas are as follows:
  - (1) Flight plan requirements. Except as specified in subparagraphs d and e, an instrument flight rules (IFR) or defense visual flight rules (DVFR) flight plan must be on file with the appropriate aeronautical facility as follows:
    - (a) Generally, for all operations that enter an ADIZ.
    - (b) For operations that will enter or exit the United States and which will operate into, within, or across the contiguous U.S. ADIZ, regardless of true airspeed.
    - (c) The flight plan must be filed before departure except for operations associated with the Alaska ADIZ when the airport of departure has no facility for filing a flight plan; in which case, the flight plan may be filed immediately after takeoff or when within range of the aeronautical facility.
  - (2) Two-way radio requirements. For the majority of operations associated with an ADIZ, an operating two-way radio is required. See 14 CFR Part 99.1 for exceptions.
  - (3) Transponder requirements. Unless otherwise authorized by ATC, each aircraft conducting operations into, within, or across the Contiguous U.S. ADIZ must be equipped with an operable radar beacon transponder having altitude reporting capability (Mode C), and that transponder must be turned on and set to reply on the appropriate code or as assigned by ATC.
  - (4) Position reporting requirements.
    - (a) For IFR flight, normal IFR position reporting.
    - (b) For DVFR flights, the estimated time of ADIZ penetration must be filed with the aeronautical facility at least 15 minutes prior to penetration except for flight in the Alaskan ADIZ; in which case, report prior to penetration.
    - (c) For inbound aircraft of foreign registry, the pilot must report to the aeronautical facility at least 1 hour prior to ADIZ penetration.
  - (5) Aircraft position tolerances:
    - (a) Over land, the tolerance is within plus or minus 5 minutes from the estimated time over a reporting point or point of penetration and within 10 NM from the centerline of an intended track over an estimated reporting point or penetration point.
    - (b) Over water, the tolerance is plus or minus 5 minutes from the estimated time over a reporting point or point of penetration and within 20 NM from the centerline of the intended track over an estimated reporting point or point of penetration (to include the Aleutian Islands).
- d. Except when applicable under 14 CFR 99.7, Part 99 does not apply to aircraft operations.
  - (1) Within the 48 contiguous states and the District of Columbia, or within the State of Alaska, and remains within 10 NM of the point of departure.
  - (2) Over any island, or within 12 NM of the coastline of any island, in the Hawaii ADIZ.
  - (3) Associated with any ADIZ other than the contiguous U.S. ADIZ when the aircraft is operating at true airspeed of less than 180 knots.
- e. Authorizations to deviate from the requirements of Part 99 may also be granted by an Air Route Traffic Control Center (ARTCC), on a local basis, for some operations associated with an ADIZ.
- f. A VFR flight plan makes an aircraft subject to interception for positive identification when entering an ADIZ. Pilots are urged to file the required Defense VFR (DVFR) flight plan either in person or by telephone prior to departure.

**INTERCEPTION SIGNALS  
ICAO STANDARD**

**SIGNALS INITIATED BY INTERCEPTING AIRCRAFT AND  
RESPONSES BY INTERCEPTED AIRCRAFT**

SERIES	INTERCEPTING AIRCRAFT SIGNALS	MEANING	INTERCEPTED AIRCRAFT RESPONSE	MEANING
1	<p>AIRPLANES: DAY—Rocking wings from a position slightly above and ahead of, and normally to the left of, the intercepted aircraft and, after acknowledgement, a slow level turn, normally to the left, on to the desired heading.</p> <p>NIGHT—Same and, in addition, flashing navigational lights at irregular intervals.</p> <p>NOTE 1.—Meteorological conditions or terrain may require the intercepting aircraft to take up a position slightly above and ahead of, and to the right of, the intercepted aircraft and to make the subsequent turn to the right.</p> <p>NOTE 2.—If the intercepted aircraft is not able to keep pace with the intercepting aircraft, the latter is expected to fly a series of race-track patterns and to rock its wings each time it passes the intercepted aircraft.</p>	<p>You have been intercepted. Follow me.</p>	<p>AIRPLANES: DAY—Rocking wings and following.</p> <p>NIGHT—Same and, in addition, flashing navigational lights at irregular intervals.</p> <p>HELICOPTERS: DAY or NIGHT—Rocking aircraft, flashing navigational lights at irregular intervals and following.</p>	<p>Understood, will comply.</p>
2	<p>DAY OR NIGHT—An abrupt breakaway maneuver from the intercepted aircraft consisting of a climbing turn of 90 degrees or more without crossing the line of flight of the intercepted aircraft.</p>	<p>You may proceed.</p>	<p>AIRPLANES: DAY or NIGHT—Rocking wings.</p> <p>HELICOPTERS: DAY or NIGHT—Rocking aircraft.</p>	<p>Understood, will comply.</p>
3	<p>DAY—Circling aerodrome, lowering landing gear and overflying runway in direction of landing or, if the intercepted aircraft is a helicopter, overflying the helicopter landing area.</p> <p>NIGHT—Same and, in addition, showing steady landing lights.</p>	<p>Land at this aerodrome.</p>	<p>AIRPLANES: DAY—Lowering landing gear, following the intercepting aircraft and, if after overflying the runway landing is considered safe, proceeding to land.</p> <p>NIGHT—Same and, in addition, showing steady landing lights (if carried).</p> <p>HELICOPTERS: DAY or NIGHT—Following the intercepting aircraft and proceeding to land, showing a steady landing light (if carried).</p>	<p>Understood, will comply.</p>

## EMERGENCY PROCEDURES

## INTERCEPTION SIGNALS

## ICAO STANDARD

SIGNALS INITIATED BY INTERCEPTING AIRCRAFT AND  
RESPONSES BY INTERCEPTED AIRCRAFT

SERIES	INTERCEPTING AIRCRAFT SIGNALS	MEANING	INTERCEPTED AIRCRAFT RESPONSE	MEANING
4	<p>AIRPLANES: DAY—Raising landing gear while passing over landing runway at a height exceeding 300m (1,000 ft) but not exceeding 600m (2,000 ft) above the aerodrome level, and continuing to circle the aerodrome.</p> <p>NIGHT—Flashing landing lights while passing over landing runway at a height exceeding 300m (1,000 ft) but not exceeding 600m (2,000 ft) above the aerodrome level, and continuing to circle the aerodrome. If unable to flash landing lights, flash any other lights available.</p>	Aerodrome you have designated is inadequate.	<p>DAY OR NIGHT—If it is desired that the intercepted aircraft follow the intercepting aircraft to an alternate aerodrome, the intercepting aircraft raises its landing gear and uses the Series 1 signals prescribed for intercepting aircraft.</p> <p>If it is decided to release the intercepted aircraft, the intercepting aircraft uses the Series 2 signals prescribed for intercepting aircraft.</p>	<p>Understood, follow me.</p> <p>Understood, you may proceed.</p>
5	<p>AIRPLANES: DAY or NIGHT—Regular switching on and off of all available lights but in such a manner as to be distinct from flashing lights.</p>	Cannot comply.	DAY or NIGHT—Use Series 2 signals prescribed for intercepting aircraft.	Understood.
6	<p>AIRPLANES: DAY or NIGHT—Irregular flashing of all available lights.</p> <p>HELICOPTERS: Day or Night—Irregular flashing of all available lights.</p>	In distress.	DAY or NIGHT—Use Series 2 signals prescribed for intercepting aircraft.	Understood.

## DISTRESS INTERCEPTION SIGNALS

SIGNAL BY INTERCEPTED AIRCRAFT	MEANING	RESPONSE BY INTERCEPTOR
<p>DAY—Porpoising</p> <p>NIGHT—Switching on landing lights and holding steady beam.</p>	In Distress	DAY OR NIGHT—Use appropriate interception signals as shown above.

**NOTE TO INTERCEPTION SIGNALS**  
(See preceding page)

The word "interception" in this context does not include intercept and escort service provided, on request, to an aircraft in distress.

An aircraft which is intercepted by another aircraft shall immediately:

- a. follow the instructions given by the intercepting aircraft, interpreting and responding to visual signals on preceding page;
- b. notify, if possible, the appropriate air traffic services unit;
- c. attempt to establish radio communication with the intercepting aircraft or with the appropriate intercept control unit, by making a general call on the emergency frequency 243.0, MHz and repeating this call on the emergency frequency 121.5 MHz, if practicable, giving the identity and position of the aircraft and the nature of the flight;
- d. if equipped with SSR transponder select Mode 3/A Code 7700, unless otherwise instructed by the appropriate air traffic services unit.

If any instructions received by radio from any sources conflict with those given by the intercepting aircraft by visual or radio signals, the intercepted aircraft shall request immediate clarification while continuing to comply with the instructions given by the intercepting aircraft.

## SEARCH AND RESCUE

**National Search and Rescue Plan.**—Under the National Search and Rescue Plan, the U.S. Coast Guard is responsible for coordination of search and rescue for the Maritime Region, and the U.S. Air Force is responsible for coordination of search and rescue for the Inland Region. In order to carry out this responsibility, the Air Force and the Coast Guard have established Rescue Coordination Center to direct search and rescue activities within their regions. This service is available to all persons and property in distress, both civilian and military. Normally, for aircraft incidents, information will be passed to the Rescue Coordination Centers through the appropriate Air Route Traffic Control Center.

Search and Rescue is a life-saving service provided through the combined efforts of the FAA, Air Force, Coast Guard, State Board of Aeronautics, Aeronautic Commissions or other similar State agencies who are assisted by other organizations such as the Civil Air Patrol, Sheriffs Air Patrol, State Police, etc. It provides search, survival aid, and rescue of personnel of missing or crashed aircraft.

Prior to departure on every flight, local or otherwise, someone at the departure point should be advised of your destination and the route of flight if other than direct. Search efforts are often wasted and rescue is often delayed because of pilots who thoughtlessly take off without advising anyone where they are going.

All you need to remember to obtain this valuable protection is to file, activate, and close flight plans with Flight Service through [www.1800wxbrief.com](http://www.1800wxbrief.com), by using a flight planning application, by radio, or by calling 1-800-WX-BRIEF.

**Close your Flight Plan.**—The control tower does not automatically close your VFR flight plan since many of the landing aircraft are not operating on flight plans. It remains the responsibility of a pilot who has filed a flight plan to close it. This will prevent a needless search. Remember, the lives of other pilots are sometimes sacrificed when searching for overdue pilots. For an emergency occurring in flight, send a distress message if possible by radio. The facility receiving your message will alert the rescue organization serving your area.

To assure survival and rescue in the event of a crash landing, the following advice is given:

- (1) For flight over uninhabited land areas it is wise to take suitable survival equipment depending on type of climate and terrain.
- (2) If forced landing occurs at sea, chances for survival are governed by degree of crew proficiency in emergency procedures and by effectiveness of water survival equipment.
- (3) If it becomes necessary to ditch, distressed aircraft should make every effort to ditch near a surface vessel. If time permits, the position of the nearest vessel can be obtained from a Coast Rescue Coordination Center through the FAA facility.
- (4) The rapidity of rescue on land or water will depend on how accurately your position may be determined. If flight plan has been followed and your position is on course, rescue should be prompt.
- (5) Unless you have good reason to believe that you will not be located by search aircraft, it is better to remain near your aircraft and prepare means for signalling whenever aircraft approach your position.

Search and rescue facilities made available to all pilots include the following:

- (a) Rescue coordination centers;
- (b) Search and rescue aircraft;
- (c) Rescue vessels;
- (d) Pararescue and ground rescue teams;
- (e) Emergency radio fixing.

The Air Rescue Service and the U.S. Coast Guard extend a welcome invitation to all pilots to visit any of their rescue units. By so doing, pilots may become more familiar with the actual means whereby this vital phase of aviation safety is carried out. The location and address of your nearest rescue unit may be obtained from the FAA or any AF or CG Rescue Coordination Center.

Report of crashed or missing aircraft may be made by any individual by a telephone call to the nearest FAA facility or to any Air Force or Coast Guard facility.

**HONOLULU AND WAKE SEARCH AND RESCUE SECTORS:**

Search and Rescue Sector for Honolulu Area established with following coordinates:

From 5°S, 110°W to 40°N, 150°W to 40°N, 160°W to 23°N, 169°W to 23°N, 177°W to 3°30'N, 180° to 5°S, 180° to 5°S, 110°W.

Search and Rescue Sector for Wake Area established with following coordinates:

27°N, 160°E to 27°N, 165°E to 23°N, 176° E to 23°N, 177°W to 3°30' N, 177°W to 3°30' N, 160°E to 27°N, 160°E.

Rescue Coordination Center (RCC) at Honolulu has coordination responsibility in the Honolulu and Wake SAR Sectors. (Telephone in Honolulu 808-531-1112)

**MIDWAY SEARCH AND RESCUE SECTOR:**

Search and Rescue Sector for Midway Area established with following coordinates:

From 23°N, 169°W to 40°N, 160°W to 40°N, 165°E to 27°N, 165°E to 23°N, 176°E to 23°N, 169°W.

Rescue Coordination Center (RCC) at Midway has coordination responsibility in this area.

**GUAM SEARCH AND RESCUE SECTOR:**

Search and Rescue Sector for Guam area established with following coordinates:

From 3°30' N, 160°E to 27°N, 160°E to 27°N, 155°E to 21°N, 155°E to 21°N, 130°E to 6°N, 132°E to 3°30' N, 132°E to 3°30' N, 160°E.

Guam Joint Search and Rescue Coordination Center (JSARCC) at Guam has coordination responsibility in this area.

**COAST GUARD RESCUE COORDINATION CENTERS:** Coast Guard Rescue Coordination Centers are served by major radio stations which guard 500kHz (CW), 8364 kHz (CW), and 2182 kHz (Voice). In addition to these major radio stations, the 247 Coast Guard units along the sea coasts of the United States and shores to the Great Lakes guard 2182 kHz (Voice). All of these facilities are available for reporting distress or potential distress. THE CALL "NCU" (CW) or "COAST GUARD" (VOICE) ALERTS ALL COAST GUARD RADIO STATIONS WITHIN RANGE.

**EMERGENCY PROCEDURES**

- I. A pilot in any emergency phase (uncertainty, alert, or distress) should do three things to obtain assistance:
- a. **If equipped with IFF, switch to "Emergency" position.**
  - b. Contact controlling agency and give nature of distress and pilots intentions.—If unable to contact controlling agencies attempt to contact any agency on assigned frequency or any of the following frequencies (transmit and receive):

Frequency	Emission	Effective Range in Nautical Miles	Guarded By
121.5 MHz	Voice	Generally limited to Radio line-of-sight	All military twrs, most civil twrs, VHF direction finding stns, radar facilities, ocean station vessels.
243.0 MHz	Voice	Generally limited to radio line-of-sight	All military twrs, most civil twrs, VHF direction finding stns, radar facilities, ocean station vessels.
2182 kHz	Voice	Generally less than 300 miles for average aircraft installations	Some ships and boats at sea, most Coast Guard stations, most commercial coast stations.
500 kHz	CW	Generally less than 100 miles for average aircraft installations.	Most large ships at sea, most Coast Guard radio stations, most commercial coast stations.
8364 kHz	CW	Up to several thousand miles, depending upon propagation conditions. Subject to "skip".	U.S.N. direction finding stations, ocean station vessels and most Coast Guard radio stations

Transmit as much of the following as possible:

1. MAYDAY, MAYDAY, MAYDAY (if distress), or PAN, PAN, PAN (if uncertainty or alert). If CW transmission use SOS (distress) or XXX (uncertainty or alert).
2. Aircraft identification repeated three times.
3. Type of aircraft.
4. Position or estimated position (stating which).
5. Heading (True or Magnetic) (stating which).
6. True airspeed or estimated true airspeed (stating which).
7. Altitude.
8. Fuel remaining in hours and minutes.
9. Nature of distress.
10. Pilot's intentions (bailout, ditch, crash landing, etc.).
11. Assistance desired (fix, steer, bearing, escort, etc.).
12. Two 10-second dashes with mike (voice) or key (CW) followed by aircraft identification (once) OVER (Voice) or K (CW).

c. **Comply with instructions received.**—Accept the “communications control” offered to you by the ground radio station, silence interfering radio stations, and do not shift frequency or shift to another ground station unless absolutely necessary.

II. Pilots on IFR flights experiencing two-way radio failure are expected to adhere to prescribed procedures.

The pilot should remember that he has two means of declaring an emergency.

- (1) Emergency IFF and/or mode A/3 Code 7700.
- (2) Sending emergency message.

Ground stations have **three** electronic means of assisting:

- (1) Receipt of emergency message;
- (2) Radar detection of IFF signal; and
- (3) DF bearings.

#### THE PILOT SHOULD REMEMBER THE FOUR C'S:

a. **Confess** your predicament to any ground radio station. Do not wait too long. Give SAR a chance!

b. **Communicate** with your ground link and pass as much of the distress message on first transmission as possible. We need information for best SAR action!

c. **Climb** if possible for better radar and DF detection. If flying at low altitude, the chance for establishing radio contact is improved by climbing, also chances of alerting radar systems are sometimes improved by climbing or descending.

NOTE:—Climbing or descending under IFR conditions within controlled air space is not permitted except in EMERGENCY. Air traffic control will operate on the assumption that the provisions of FAR 91.185 are being followed by the pilot.

d. **Comply—especially Comply**—with advice and instructions received, if you really want to help. Assist the ground “communications control” station to control communications on the distress frequency on which you are working (as that is the distress frequency for your case). Tell interfering stations to maintain silence until you call. Cooperate!

III. For bail-out, set radio for continuous emission. For ditching or crash landing, the radio equipment should if it is considered that there is no additional risk of fire and if circumstances permit, be set for continuous transmission.

When a pilot is in doubt of his position, or feels apprehensive for his safety, he should not hesitate to request assistance. Search and Rescue facilities, including Radar, Radio and DF stations, are ready and willing to help. There is no penalty for using them. Delay has caused crashes and cost lives. Take action!

**EMERGENCY PROCEDURES**  
**INTERNATIONAL GROUND/AIR EMERGENCY CODE**

**EMERGENCY SIGNALS**  
**GROUND-AIR VISUAL CODE FOR USE BY SURVIVORS**

No.	MESSAGE	CODE SYMBOL
1	Require assistance	
2	Require medical assistance	
3	No or Negative	
4	Yes or Affirmative

7	Nothing found, Will continue search.	

**1. INSTRUCTIONS**

- a. Lay out symbols by using strips of fabric or parachutes, pieces of wood, stones, or any available material.
- b. Provide as much color contrast as possible between material used for symbols and background against which symbols are exposed.
- c. Symbols should be at least 10 feet high or larger. Care should be taken to lay out symbols exactly as shown.
- d. In addition to using symbols every effort is to be made to attract attention by means of radio, flares, smoke, or other available means.
- e. On snow-covered ground, signals can be made by dragging, shoveling or tramping. Depressed areas forming symbols will appear black from the air.
- f. Pilot should acknowledge message by rocking wings from side to side.

## CORRECTIONS, COMMENTS AND/OR PROCUREMENT

FOR CHARTING ERRORS, OR FOR CHANGES, ADDITIONS, RECOMMENDATIONS  
ON PROCEDURAL ASPECTS CONTACT:

FAA, Aeronautical Information Services

1305 East-West Highway

SSMC 4, Room 3424

Silver Spring, MD 20910

Telephone: 1-800-638-8972

[https://www.faa.gov/air\\_traffic/flight\\_info/aeronav/aero\\_data/](https://www.faa.gov/air_traffic/flight_info/aeronav/aero_data/)For inquiries regarding military charts, please contact [aerohelp@nga.mil](mailto:aerohelp@nga.mil)

## FOR PROCUREMENT:

For digital products, visit our website at:

[https://www.faa.gov/air\\_traffic/flight\\_info/aeronav/digital\\_products/](https://www.faa.gov/air_traffic/flight_info/aeronav/digital_products/)

For a list of approved FAA Print Providers, visit our website at:

[https://www.faa.gov/air\\_traffic/flight\\_info/aeronav/print\\_providers/](https://www.faa.gov/air_traffic/flight_info/aeronav/print_providers/)Frequently asked questions (FAQ) are answered on our website at <https://www.faa.gov/go/ais>  
See the FAQs prior to contact via toll free number or email.Request for the creation or revisions to Airport Diagrams should be in accordance with  
FAA Order 7910.4.

PAC

INOP COMPONENTS 19339

INOPERATIVE COMPONENTS OR VISUAL AIDS TABLE  
(For Civil Use Only)

Straight-in and Sidestep landing minimums published on instrument approach procedure charts are based on full operation of all components and visual aids (see exception below for ALSF 1 & 2) associated with the particular approach chart being used. Higher minimums are required with inoperative components or visual aids as indicated below. If more than one component is inoperative, each minimum is raised to the highest minimum required by any single component that is inoperative. ILS glideslope inoperative minimums are published on the instrument approach charts as localizer minimums. This table applies to approach categories A thru D and is to be used unless amended by notes on the approach chart. Such notes apply only to the particular approach category(ies) as stated. Category E inoperative notes will be specified when published on civil charts. The inoperative table does not apply to Circling minimums. See legend page for description of components indicated below.

Full Operation Exception: For ALSF 1 & 2 operated as SSALR, or when the sequenced flashing lights are inoperative, there is no effect on visibility for ILS lines of minima.

(1) ILS, PAR, LPV, GLS minima

Inoperative Component or Visual Aid	Increase Visibility
All ALS types (except ODALS)	¼ mile

(2) ILS, LPV, GLS with visibility minima of RVR 1800†/2000\*/2200\*

Inoperative Component or Visual Aid	Increase Visibility
ALSF 1 & 2, MALSR, SSALR	To RVR 4000† To RVR 4500*
TDZL or RCLS	To RVR 2400#
RVR	To ½ mile

#For ILS, LPV, GLS procedures with a 200 foot HAT, RVR 1800 authorized with use of FD or AP or HUD to DA.

(3) All Approach Types and all lines of minima other than (1) & (2) above

Inoperative Component or Visual Aid	Increase Visibility
ALSF 1 & 2, MALSR, SSALR	½ mile
MALSF, MALS, SSALF, SSALS, SALSF, SALS	¼ mile

(4) Sidestep minima (CAT C-D)

Inoperative Component or Visual Aid to Sidestep Runway	Increase Visibility
ALSF 1 & 2, MALSR, SSALR	½ mile

(5) All Approach Types, All lines of minima

Inoperative Component or Visual Aid	Increase Visibility
ODALS (CAT A-B)	¼ mile
ODALS (CAT C-D)	⅛ mile

INOP COMPONENTS 19339

TERMS/LANDING MINIMA DATA 20142

IFR LANDING MINIMA

The United States Standard for Terminal Instrument Procedures (TERPS) is the approved criteria for formulating instrument approach procedures. Landing minima are established for six aircraft approach categories (ABCDE and COPTER). In the absence of COPTER MINIMA, helicopters may use the CAT A minima of other procedures.

LANDING MINIMA FORMAT

In this example airport elevation is 1179, and runway touchdown zone elevation is 1152.

	DA Visibility (RVR 100's of feet)	HAT Aircraft Approach Category	D
Straight-in ILS to Runway 27	A 1352/24	B	200 (200-1/2)
Straight-in with Glide Slope Inoperative or not used to Runway 27	1440/24	288 (300-1/2)	1440/50 288 (300-1)
	MDA HAA 361 (400-1)	Visibility in Statute Miles 461 (500-1)	1640-1 461 (500-1) 1640-1 1/2 461 (500-1 1/2)
			1740-2 561 (600-2)

All weather minima in parentheses not applicable to Civil Pilots. Military Pilots refer to appropriate regulations.

COPTER MINIMA ONLY

CATEGORY	COPTER
H-176°	680-1/2 363 (400-1/2)

Copter Approach Direction

Height of MDA/DA Above Landing Area (HAL)

No circling minima are provided

NOTE: The **W** symbol indicates outages of the WAAS vertical guidance may occur daily at this location due to initial system limitations. WAAS NOTAMS for vertical outages are not provided for this approach. Use LNAV minima for flight planning at these locations, whether as a destination or alternate. For flight operations at these locations, when the WAAS avionics indicate that LNAV/VNAV or LPV service is available, then vertical guidance may be used to complete the approach using the displayed level of service. Should an outage occur during the procedure, reversion to LNAV minima may be required. As the WAAS coverage is expanded, the **W** will be removed.

RNAV minima are dependent on navigation equipment capability, as stated in the applicable AFM, AFMS, or other FAA approved document. See AIM paragraph 5-4-5, AC 90-105 and AC 90-107 for detailed requirements for each line of minima.

COLD TEMPERATURE AIRPORTS

NOTE: A **3**-12°C symbol indicates a cold temperature altitude correction is required at this airport when reported temperature is at or below the published temperature. See the following Cold Temperature Error Table to make manual corrections. Advise ATC with altitude correction. Advising ATC with altitude corrections is not required in the final segment. See Aeronautical Information Manual (AIM), Chapter 7, for guidance and additional information. For a complete list, see the "Cold Temperature Airports" link under the Additional Resources heading at the bottom of the following page: [http://www.faa.gov/air\\_traffic/flight\\_info/aeronav/digital\\_products/dtpp/search/](http://www.faa.gov/air_traffic/flight_info/aeronav/digital_products/dtpp/search/)

COLD TEMPERATURE ERROR TABLE

HEIGHT ABOVE AIRPORT IN FEET

	200	300	400	500	600	700	800	900	1000	1500	2000	3000	4000	5000
REPORTED TEMP °C														
+10	10	10	10	10	20	20	20	20	20	30	40	60	80	90
0	20	20	30	30	40	40	50	50	60	90	120	170	230	280
-10	20	30	40	50	60	70	80	90	100	150	200	290	390	490

-40	50	80	100	120	150	170	190	220	240	360	480	720	970	1210
-50	60	90	120	150	180	210	240	270	300	450	590	890	1190	1500

AIRCRAFT APPROACH CATEGORIES

Aircraft approach category indicates a grouping of aircraft based on a speed of VREF, if specified, or if VREF not specified, 1.3 VSO at the maximum certificated landing weight. VREF, VSO, and the maximum certificated landing weight are those values as established for the aircraft by the certification authority of the country of registry. Helicopters are Category A aircraft. An aircraft shall fit in only one category. When necessary to operate the aircraft at an airspeed in excess of the maximum airspeed of its certified aircraft approach category, pilots should use the applicable higher category minima. For additional options and to ensure the aircraft remains within protected airspace, consult the AIM. See following category limits:

MANEUVERING TABLE

Approach Category	A	B	C	D	E
Speed (Knots)	0-90	91-120	121-140	141-165	Abv 165

TERMS/LANDING MINIMA DATA 20142

TERMS/LANDING MINIMA DATA 19339

**CIRCLING APPROACH OBSTACLE PROTECTED AIRSPACE**

The circling MDA provides vertical obstacle clearance during a circle-to-land maneuver. The circling MDA protected area extends from the threshold of each runway authorized for landing following a circle-to-land maneuver for a distance as shown in the tables below. The resultant arcs are then connected tangentially to define the protected area.

**STANDARD CIRCLING APPROACH MANEUVERING RADIUS**

Circling approach protected areas developed prior to late 2012 used the radius distances shown in the following table, expressed in nautical miles (NM), dependent on aircraft approach category. The approaches using standard circling approach areas can be identified by the absence of the **C** symbol on the circling line of minima.

Circling MDA in feet MSL	Approach Category and Circling Radius (NM)				
	CAT A	CAT B	CAT C	CAT D	CAT E
All Altitudes	1.3	1.5	1.7	2.3	4.5

**C EXPANDED CIRCLING APPROACH MANEUVERING AIRSPACE RADIUS**

Circling approach protected areas developed after late 2012 use the radius distance shown in the following table, expressed in nautical miles (NM), dependent on aircraft approach category, and the altitude of the circling MDA, which accounts for true airspeed increase with altitude. The approaches using expanded circling approach areas can be identified by the presence of the **C** symbol on the circling line of minima.

Circling MDA in feet MSL	Approach Category and Circling Radius (NM)				
	CAT A	CAT B	CAT C	CAT D	CAT E
1000 or less	1.3	1.7	2.7	3.6	4.5
1001-3000	1.3	1.8	2.8	3.7	4.6
3001-5000	1.3	1.8	2.9	3.8	4.8
5001-7000	1.3	1.9	3.0	4.0	5.0
7001-9000	1.4	2.0	3.2	4.2	5.3
9001 and above	1.4	2.1	3.3	4.4	5.5

**Comparable Values of RVR and Visibility**

The following table shall be used for converting RVR to ground or flight visibility. For converting RVR values that fall between listed values, use the next higher RVR value; do not interpolate. For example, when converting 4800 RVR, use 5000 RVR with the resultant visibility of 1 mile.

RVR (feet)	Visibility (SM)						
1600	¼	2400	½	3500	¾	5500	1
1800	½	2600	½	4000	¾	6000	1½
2000	½	3000	¾	4500	¾		
2200	½	3200	¾	5000	1		

**RADAR MINIMA**

	RWY	GP/TCH/RPI	CAT	DA/ MDA-VIS	HAT HAA	CEIL-VIS	CAT	DA/ MDA-VIS	HAT HAA	CEIL-VIS
PAR	10	2.5°/42/1000	ABCDE	195/16	100	(100-¼)				
	28	2.5°/48/1068	ABCDE	187/16	100	(100-¼)				
ASR	10		ABC	560/40	463	(500-¾)	DE	560/50	463	(500-1)
	28		AB	600/50	513	(600-1)	CDE	600/60	513	(600-1¼)
CIR	10		AB	560-1¼	463	(500-1¼)	CDE	560-1½	463	(500-1½)
	28		AB	600-1¼	503	(600-1¼)	CDE	600-1½	503	(600-1½)

Radar Minima:

1. Minima shown are the lowest permitted by established criteria. Pilots should consult applicable directives for their category of aircraft.
2. The circling MDA and weather minima to be used are those for the runway to which the final approach is flown-not the landing runway. In the above RADAR MINIMA example, a category C aircraft flying a radar approach to runway 10, circling to land on runway 28, must use an MDA of 560 feet with weather minima of 500-1½.

NOTE: Military RADAR MINIMA may be shown with communications symbology that indicates emergency frequency monitoring capability by the radar facility as follows: (E) VHF and UHF emergency frequencies monitored (V) VHF emergency frequency (121.5) monitored (U) UHF emergency frequency (243.0) monitored

Additionally, unmonitored frequencies which are available on request from the controlling agency may be annotated with an "x".

- ▲ Alternate Minima not standard. Civil users refer to tabulation. USA/USN/USAF pilots refer to appropriate regulations.
- ▲ NA Alternate minima are Not Authorized due to unmonitored facility or absence of weather reporting service.
- ▼ Airport is published in the Takeoff Minima, (Obstacle) Departure Procedures, and Diverse Vector Area (Radar Vectors) tabulation.

TERMS/LANDING MINIMA DATA 19339

## GENERAL INFO 19339

## GENERAL INFORMATION

This publication is issued every 56 days and includes Standard Instrument Approach Procedures (SIAPs), Standard Instrument Departures (SIDs), Standard Terminal Arrivals (STARs), IFR Takeoff Minimums and (Obstacle) Departure Procedures (ODPs), IFR Alternate Minimums, and Radar Instrument Approach Minimums for use by civil and military aviation. The organization responsible for SIAPs, Radar Minimums, SIDs, STARs and graphic ODPs is identified in parentheses in the top margin of the procedure; e.g., (FAA), (FAA-O), (USA), (USAF), (USN). SIAPs with the (FAA) and (FAA-O) designation are regulated under 14 CFR, Part 97. SIAPs with the (FAA-O) designation have been developed under Other Transaction Agreement (OTA) by private providers and have been certified by the FAA. See 14 CFR, Part 91.175 (a) and the AIM for further details. 14 CFR, Part 91.175 (g) and the Special Notices section of the Chart Supplement contain information on civil operations at military airports.

The FAA uses an internal numbering system on all charts in the TPP. This Approach and Landing (AL) number is located on the top center margin of the chart followed by the organization responsible for the procedure in parentheses, e.g., AL-18 (FAA), AL-227 (USAF).

CHART CURRENCY INFORMATION

Date of Latest Revision 09365

The Date of Latest Revision identifies the Julian date the chart was added or last revised for any reason. The first two digits indicate the year, the last three digits indicate the day of the year (001 to 365/6) in which the latest revision of any kind has been made to the chart.

FAA Procedure	←	Orig 31DEC09	←	Procedure Amendment
Amendment Number	→	Amdt 2B 12MAR09	→	Effective Date

The FAA Procedure Amendment Number represents the most current amendment of a given procedure. The Procedure Amendment Effective Date represents the AIRAC cycle date on which the procedure amendment was incorporated into the chart. Updates to the amendment number & effective date represent procedural/criteria revisions to the charted procedure, e.g., course, fix, altitude, minima, etc. On Departure Procedures and Standard Terminal Arrivals, procedural revisions to the current chart are indicated by an upnumber to the procedure title with the procedure amendment effective date following. On Radar Minima, Takeoff Minimums and (Obstacle) Departure Procedures and Diverse Vector Areas, the FAA Procedure Amendment Number, Procedure Effective Date, and the Julian Date of Last Revision will be shown on the same line, e.g., AMDT 2 10DEC15 (15344).

MISCELLANEOUS

★ Indicates a non-continuously operating facility, see Chart Supplement.

For Civil (FAA) instrument procedures, "RADAR REQUIRED" in the planview of the chart indicates that ATC radar must be available to assist the pilot when transitioning from the en route environment. "Radar required" in the pilot briefing portion of the chart indicates that ATC radar is required on portions of the procedure outside the final approach segment, including the missed approach. Some military procedures also have equipment requirements such as "Radar Required", but do not conform to the same charting application standards used by the FAA.

Distances are in nautical miles (except visibility in statute miles and Runway Visual Range in hundreds of feet). Runway dimensions are in feet. Elevations are in feet, Mean Sea Level (MSL). Ceilings are in feet above airport elevation. Radials/bearings/headings/courses are magnetic. Horizontal Datum: Unless otherwise noted on the chart, all coordinates are referenced to North American Datum 1983 (NAD 83), which for charting purposes is considered equivalent to World Geodetic System 1984 (WGS 84).

Terrain is scaled within the neat lines (planview boundaries) and does not accurately underlie not-to-scale distance depictions or symbols.

## GENERAL INFO 19339

GENERAL INFO 20142

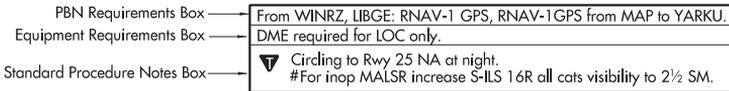

STANDARD TERMINAL ARRIVALS AND DEPARTURE PROCEDURES

The use of the associated codified STAR/DP and transition identifiers are requested of users when filing flight plans via teletype and are required for users filing flight plans via computer interface. It must be noted that when filing a STAR/DP with a transition, the first three coded characters of the STAR and the last three coded characters of the DP are replaced by the transition code. Examples: ACTON SIX ARRIVAL, file (AQN.AQN6); ACTON SIX ARRIVAL, EDNAS TRANSITION, file (EDNAS.AQN6). FREEHOLD THREE DEPARTURE, file (FREH3.RBV), FREEHOLD THREE DEPARTURE, ELWOOD CITY TRANSITION, file (FREH3.EWC).

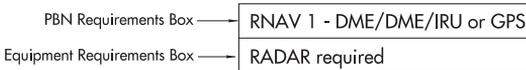

PROCEDURE PBN/EQUIPMENT REQUIREMENTS

Users will begin to see Performance-Based Navigation (PBN) Requirements and Equipment Requirements on Instrument Approach Procedures (IAPs), RNAV STARS and RNAV DPs prominently displayed in separate, standardized notes boxes. For procedures with PBN elements, the PBN box will contain the procedure's navigation specification(s); and, if required: specific sensors or infrastructure needed for the navigation solution; any additional or advanced functional requirements; the minimum Required Navigation Performance (RNP) value and any amplifying remarks. Items listed in this PBN box are REQUIRED for the procedure's PBN elements. The Equipment Requirements Box will list non-PBN requirements. On charts with both PBN elements and equipment requirements, the PBN requirements box will be listed first. The publication of these notes will continue incrementally until all charts have been amended to comply with the new standard.

IAP PBN/Equipment Requirements Notes Box

RNAV STAR and DP PBN/Equipment Requirements Notes Box

PILOT CONTROLLED AIRPORT LIGHTING SYSTEMS

Available pilot controlled lighting (PCL) systems are indicated as follows:

1. Approach lighting systems that bear a system identification are symbolized using negative symbology, e.g., , , .
2. Approach lighting systems that do not bear a system identification are indicated with a negative "0" beside the name.

A star (\*) indicates non-standard PCL, consult Chart Supplement, e.g., .

To activate lights, use frequency indicated in the communication section of the chart with a  or the appropriate lighting system identification e.g., UNICOM 122.8 , , .

KEY MIKE

- 7 times within 5 seconds
- 5 times within 5 seconds
- 3 times within 5 seconds

FUNCTION

- Highest intensity available
- Medium or lower intensity (Lower REIL or REIL-off)
- Lowest intensity available (Lower REIL or REIL-off)

INSTRUMENT APPROACH PROCEDURES (CHARTS)

PROFILE VIEW

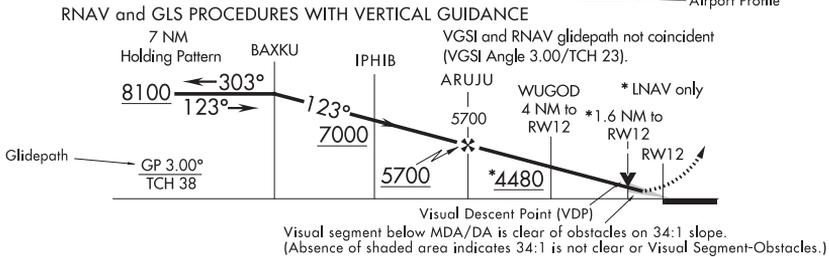

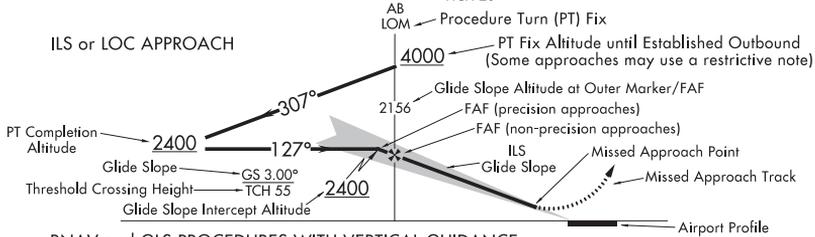

Three different methods are used to depict either electronic or vertical guidance: "GS", "GP", or "VDA".

1. "GS" indicates that an Instrument Landing System (ILS) electronic glide slope (a ground antenna) provides vertical guidance. The profile section of ILS procedures depict a GS angle and TCH in the following format:  $\text{GS } 3.00^\circ$  TCH 55

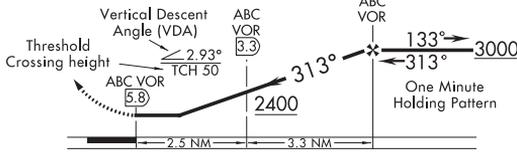

2. "GP" on GLS and RNAV procedures indicates that either electronic vertical guidance (via Wide Area Augmentation System - WAAS or Ground Based Augmentation System - GBAS) or barometric vertical guidance is provided. GLS and RNAV procedures with a published decision altitude (DA/H) depict a GP angle and TCH in the following format:  $\text{GP } 3.00^\circ$  TCH 50

3. An advisory vertical descent angle (VDA) is provided on non-vertically guided conventional procedures and RNAV procedures with only a minimum descent altitude (MDA) to assist in preventing controlled flight into terrain. On Civil (FAA) procedures, this information is placed above or below the procedure track following the fix it is based on. Absence of a VDA or a note that the VDA is not authorized indicates that the prescribed obstacle clearance surface is not clear and the VDA must not be used below MDA. VDA is depicted in the following format:  $\leq 3.00^\circ$ .

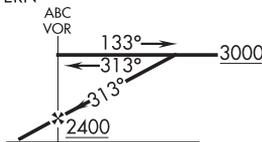

On Copter procedures this is depicted in the following format:  $\leq 7.30^\circ$  HCH 20 TCH 55

Runways

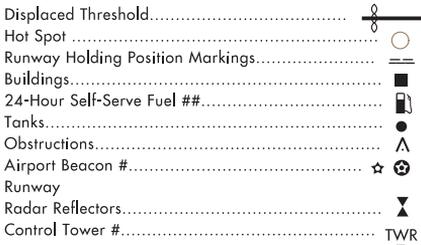

ARRESTING GEAR: Specific arresting gear systems; e.g., BAK12, MA-1A etc., shown on airport diagrams, not applicable to Civil Pilots. Military Pilots refer to appropriate DOD publications.

ARRESTING SYSTEM (EMAS)

REFERENCE FEATURES

# When Control Tower and Rotating Beacon are co-located, Beacon symbol will be used and further identified as TWR.

## A fuel symbol is shown to indicate 24-hour self-serve fuel available, see appropriate Chart Supplement for information.

NOTE:

All new and revised airport diagrams are shown referenced to the World Geodetic System (WGS) (noted on appropriate diagram), and may not be compatible with local coordinates published in FLIP. (Foreign Only)

Runway Weight Bearing Capacity/or PCN Pavement Classification Number is shown as a codified expression. Refer to the appropriate Supplement/Directory for applicable codes e.g., RWY 14-32 PCN 80 F/D/X/U S-75, D-185, 2S-175, 2D-325

Helicopter Alighting Areas

Negative Symbols used to identify Copter Procedures landing point.....

NOTE:

Landmark features depicted on Copter Approach insets and sketches are provided for visual reference only.

Runway TDZ elevation.....TDZE 123  
 ←0.3% DOWN  
 Runway Slope.....0.8% UP→  
 (shown when runway slope is greater than or equal to 0.3%)

NOTE:

Runway Slope measured to midpoint on runways 8000 feet or longer.

U.S. Navy Optical Landing System (OLS) "OLS" location is shown because of its height of approximately 7 feet and proximity to edge of runway may create an obstruction for some types of aircraft.

Approach light symbols are shown in the Flight Information Handbook.

Airport diagram scales are variable.

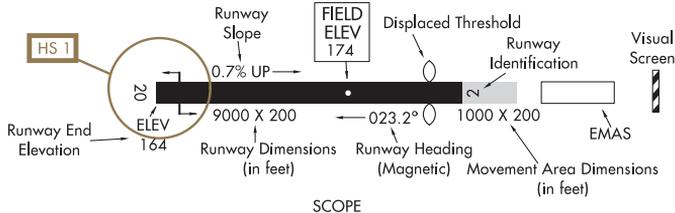

True/magnetic North orientation may vary from diagram to diagram

Coordinate values are shown in 1 or ½ minute increments. They are further broken down into 6 second ticks, within each 1 minute increments.

Positional accuracy within ±600 feet unless otherwise noted on the chart.

Runway length depicted is the physical length of the runway (end-to-end, including displaced thresholds if any) but excluding areas designated as stopways.

A symbol is shown to indicate runway declared distance information available, see appropriate Chart Supplement for distance information.

SCOPE  
 Airport diagrams are specifically designed to assist in the movement of ground traffic at locations with complex runway/taxiway configurations. Airport diagrams are not intended to be used for approach and landing or departure operations. For revisions to Airport Diagrams: Consult FAA Order 7910.4.

## TAKEOFF MINIMUMS, (OBSTACLE) DEPARTURE PROCEDURES, AND DIVERSE VECTOR AREA (RADAR VECTORS) INSTRUMENT APPROACH PROCEDURE CHARTS

### IFR TAKEOFF MINIMUMS AND (OBSTACLE) DEPARTURE PROCEDURES

#### Civil Airports and Selected Military Airports

**ALL USERS:** Airports that have Departure Procedures (DPs) designed specifically to assist pilots in avoiding obstacles during the climb to the minimum enroute altitude, and/or airports that have civil IFR takeoff minimums other than standard, are listed below. Takeoff Minimums and Departure Procedures apply to all runways unless otherwise specified. An entry may also be listed that contains only Takeoff Obstacle Notes. Altitudes, unless otherwise indicated, are minimum altitudes in MSL.

DPs specifically designed for obstacle avoidance are referred to as Obstacle Departure Procedures (ODPs) and are textually described below, or published separately as a graphic procedure. If the ODP is published as a graphic procedure, its name will be listed below, and it can be found in either this volume (civil), or the applicable military volume, as appropriate. Users will recognize graphic obstacle DPs by the term "(OBSTACLE)" included in the procedure title; e.g., TETON TWO (OBSTACLE). If not specifically assigned an ODP, SID, or radar vector as part of an IFR clearance, an ODP may be required to be flown for obstacle clearance, even though not specifically stated in the IFR clearance. When doing so in this manner, ATC should be informed when the ODP being used contains a specified route to be flown, restrictions before turning, and/or altitude restrictions.

Some ODPs, which are established solely for obstacle avoidance, require a climb in visual conditions to cross the airport, a fix, or a NAVAID in a specified direction, at or above a specified altitude. These procedures are called Visual Climb Over Airport (VCOA). To ensure safe and efficient operations, the pilot must verbally request approval from ATC to fly the VCOA when requesting their IFR clearance.

At some locations where an ODP has been established, a diverse vector area (DVA) may be created to allow radar vectors to be used in lieu of an ODP. DVA information will state that headings will be as assigned by ATC and climb gradients, when applicable, will be published immediately following the specified departure procedure.

Graphic DPs designed by ATC to standardize traffic flows, ensure aircraft separation and enhance capacity are referred to as "Standard Instrument Departures (SIDs)". SIDs also provide obstacle clearance and are published under the appropriate airport section. ATC clearance must be received prior to flying a SID.

**CIVIL USERS NOTE:** Title 14 Code of Federal Regulations Part 91 prescribes standard takeoff rules and establishes takeoff minimums for certain operators as follows: (1) For aircraft, other than helicopters, having two engines or less – one statute mile visibility. (2) For aircraft having more than two engines – one-half statute mile visibility. (3) For helicopters – one-half statute mile visibility. These standard minima apply in the absence of any different minima listed below.

**MILITARY USERS NOTE:** Civil (nonstandard) takeoff minima are published below. For military takeoff minima, refer to appropriate service directives.

LAND AND HOLD-SHORT OPERATIONS (LAHSO)

LAHSO is an acronym for "Land and Hold-Short Operations." These operations include landing and holding short of an intersection runway, an intersecting taxiway, or other predetermined points on the runway other than a runway or taxiway. Measured distance represents the available landing distance on the landing runway, in feet.

Specific questions regarding these distances should be referred to the air traffic manager of the facility concerned. The Aeronautical Information Manual contains specific details on hold-short operations and markings.

CITY/AIRPORT	LDG RWY	HOLD-SHORT POINT	AVBL LDG DIST
HONOLULU, HI			
DANIEL K INOUE INTL (HNL) (PHNL)	04L	08L-26R	3,700 feet
	04R	08L-26R	6,250 feet
	08L	04L-22R	9,300 feet

HOT SPOTS

An "airport surface hot spot" is a location on an aerodrome movement area with a history or potential risk of collision or runway incursion, and where heightened attention by pilots/drivers is necessary.

A "hot spot" is a runway safety related problem area on an airport that presents increased risk during surface operations. Typically it is a complex or confusing taxiway/taxiway or taxiway/runway intersection. The area of increased risk has either a history of or potential for runway incursions or surface incidents, due to a variety of causes, such as but not limited to: airport layout, traffic flow, airport marking, signage and lighting, situational awareness, and training. Hot spots are depicted on airport diagrams as open circles or polygons designated as "HS 1", "HS 2", etc. and tabulated in the list below with a brief description of each hot spot. Hot spots will remain charted on airport diagrams until such time the increased risk has been reduced or eliminated.

CITY/AIRPORT	HOT SPOT	DESCRIPTION*
HONOLULU, HI DANIEL K INOUYE INTL (HNL) (PHNL)	HS 1	Rwy 04R/Rwy 04L thresholds: wrong surface landing risk. Pilots cleared to land Rwy 04L or 04R sometimes land on the wrong rwy.
	HS 2	Aircraft Idg Rwy 04R and exiting left onto Twy K, sometimes fail to hold short of Rwy 04L-22R and Rwy 08L-26R.
	HS 3	Aircraft proceeding north on Twy E and instructed to turn left onto Twy B, sometimes miss the turn onto Twy B, and proceed onto Rwy 08L-26R without clearance.
	HS 4	Pilot confusion may be caused by the convergence of Twy A, Twy V, Twy T, Twy RB, and Twy M, in close proximity to Rwy 08L.
	HS 5	Tower Non-visibility area. Area not visible from the control tower due to trees.
	HS 6	Minimal distance between rwy hold short lines between Rwy 04L-22R/Rwy 04R-22L.
KAHULUI, HI KAHULUI (OGG) (PHOG)	HS 1	Rwy 05, Twy A, Twy F, and Twy G.
	HS 2	Rwy 02-20, Twy E and the ramp.
	HS 3	Twy A, Rwy 05-23
KAUNAKAKAI, HI MOLOKAI (MKK)(PHMK)	HS 1	Area not visible from control tower.

ELLISON ONIZUKA KONA INTL AT KEAHOLE (KOA) (PHKO)

AL-5761 (FAA)

KAILUA-KONA, HAWAII

## ARRIVAL ROUTE DESCRIPTION

LANAI TRANSITION (LNY.VECKI9): From over LNY VORTAC on LNY R-116 to TAMMI , then on heading 167° to VECKI . Thence . . . .

MAUI TRANSITION (OGG.VECKI9): From over OGG VORTAC on OGG R-188 to ZILNA , then on LNY R-116 to TAMMI , then on heading 167° to VECKI .  
Thence . . . .

MOLOKAI TRANSITION (MKK.VECKI9): From over MKK VORTAC on MKK R-107 to WANSI , then on KOA R-351 to TAMMI , then on heading 167° to VECKI .  
Thence . . . .

OKALA TRANSITION (OKALA.VECKI9): From over OKALA on MUE VOR/DME R-075 to MUE VOR/DME, then on MUE R-247 to VECKI . Thence . . . .

ONOHI TRANSITION (ONOHI.VECKI9): From over ONOHI on KOA R-351 to TAMMI , then on heading 167° to VECKI . Thence . . . .

UPOLU POINT TRANSITION (UPP.VECKI9): From over UPP VORTAC on UPP R-210 to BAYCA , then on I-KOA 174° course to VECKI . Thence . . . .

. . . . from over VECKI INT on I-KOA localizer course to Ellison Onizuka Kona Intl at Keahole.

LOST COMMUNICATIONS: At VECKI INT proceed with ILS or LOC/DME RWY 17 approach.

TAKEOFF MINIMUMS

Rwys 4W, 8W, 22W, 26W: NA-ATC.

Rwys 22L/R, 26R: Standard.

Rwy 4L/R: Standard with minimum climb of 425' per NM to 1900, do not exceed 180K until southeast bound on 155° heading, or 1700-2½ for VCOA.

Rwy 8L: Standard with minimum climb of 310' per NM to 1000, or 1700-2½ for VCOA.

Rwy 8R: Standard with minimum climb of 270' per NM to 1000, or 1700-2½ for VCOA.

Rwy 26L: Standard with minimum climb of 237' per NM to 300, or 1700-2½ for VCOA.

(NOTES CONTINUED ON FOLLOWING PAGE)

NOTE: Chart not to scale.

DEPARTURE ROUTE DESCRIPTION

TAKEOFF RUNWAYS 4L/R, 8L/R: Climbing right turn to 3000 on heading 155° to intercept HNL R-125 to HAUNA INT before proceeding on course, or . . .

TAKEOFF RUNWAYS 22L/R, 26L/R: Climbing left turn to 3000 on heading 140° to intercept HNL R-171 to ALANA INT before proceeding on course, or . . .

. . . for visual climb over airport: obtain ATC approval for VCOA when requesting IFR clearance. Climb in visual conditions to cross Daniel K. Inouye Intl Airport southbound at 1600, continue climb to 3000 on HNL R-171 to ALANA INT before proceeding on course.

## DEPARTURE ROUTE DESCRIPTION

TAKEOFF RUNWAYS 22L/R: Climb on heading 222° to intercept course 208° to cross BANZI at or below 5000, thence . . . .

TAKEOFF RUNWAY 26L: Climb on heading 259° to intercept course 199° to cross BANZI at or below 5000, thence . . . .

TAKEOFF RUNWAY 26R: Climb on heading 259° to intercept course 197° to cross BANZI at or below 5000, thence . . . .

. . . . on track 208° to LHAKE, then on track 208° for RADAR vectors to assigned route/fix, maintain 5000 or as assigned by ATC. Expect clearance to filed altitude/flight level within 10 minutes after departure.

NOTE: ALANA departures expect direct/vectors to ALANA/V8/V16/V20/V21.

NOTE: APACK departures expect direct/vectors to APACK/R463.

NOTE: CANON departures expect direct/vectors to CANON/V15.

NOTE: CARRP departures expect direct/vectors to CARRP/A579.

NOTE: CHOKO departures expect direct/vectors to CHOKO/R584/B326.

NOTE: CLUTS departures expect direct/vectors to CLUTS/R465.

NOTE: DANNO departures expect direct/vectors to DANNO.

NOTE: DOVRR departures expect direct/vectors to DOVRR/B596.

NOTE: EBBER departures expect direct/vectors to EBBER/R577.

NOTE: FITES departures expect direct/vectors to FITES/R578.

NOTE: GECKO departures expect direct/vectors to GECKO/V4/V12/V16.

NOTE: HAUNA departures expect direct/vectors to HAUNA/V8/V16/V20/V21/LNY.

NOTE: HOOPA departures expect direct/vectors to HOOPA/A450.

NOTE: JULLE departures expect direct/vectors to JULLE/V16/V20/V21.

NOTE: KATHS departures expect direct/vectors to KATHS/A450.

NOTE: KEOLA departures expect direct/vectors to KEOLA/V16.

NOTE: KOA departures expect direct/vectors to KOA.

NOTE: LILIA departures expect direct/vectors to LILIA/V15.

NOTE: OPIHI departures expect direct/vectors to OPIHI/V8/V16/V20/V21.

NOTE: PALAY departures expect direct/vectors to PALAY/V2/V8/LNY.

NOTE: PUPPI departures expect direct/vectors to PUPPI/V16.

NOTE: SCOON departures expect direct/vectors to SCOON.

NOTE: SYVAD departures expect direct/vectors to SYVAD/V16.

NOTE: THOMA departures expect direct/vectors to THOMA.

NOTE: UPP departures expect direct/vectors to UPP.

NOTE: ZIGIE departures expect direct/vectors to ZIGIE/A331.

## DEPARTURE ROUTE DESCRIPTION

Turn right/left to heading as assigned by Tower, expect vectors to MKK VORTAC, maintain 5000'; then via (transition). Expect clearance to enroute altitude/flight level at MKK VORTAC. Cross egress fixes ZIGIE, APACK, CLUTS, EBBER, and FITES at assigned cruising altitude, unless otherwise advised by ATC.

APACK TRANSITION (MKK4.APACK): From over MKK VORTAC via MKK R-004 to APACK INT.

CLUTS TRANSITION (MKK4.CLUTS): From over MKK VORTAC via MKK R-040 to CLUTS INT.

EBBER TRANSITION (MKK4.EBBER): From over MKK VORTAC via MKK R-056 to BLUSH INT then via 080° heading and R577 to EBBER INT.

FITES TRANSITION (MKK4.FITES): From over MKK VORTAC via MKK R-056 to BLUSH INT then via 095° heading and R578 to FITES INT.

PULPS TRANSITION (MKK4.PULPS): From over MKK VORTAC via MKK R-108 to PULPS INT.

ZIGIE TRANSITION (MKK4.ZIGIE): From over MKK VORTAC via MKK R-004 to intercept and proceed via OGG R-337 to REXIE DME. Then via RNAV heading 334° to ZIGIE WP.

## CLIMB/DESCENT TABLE 10042

INSTRUMENT TAKEOFF OR APPROACH PROCEDURE CHARTS RATE OF CLIMB/DESCENT TABLE (ft. per min)													
A rate of climb/descent table is provided for use in planning and executing climbs or descents under known or approximate ground speed conditions. It will be especially useful for approaches when the localizer only is used for course guidance. A best speed, power, altitude combination can be programmed which will result in a stable glide rate and altitude favorable for executing a landing if minimums exist upon breakout. Care should always be exercised so that minimum descent altitude and missed approach point are not exceeded.													
CLIMB/ DESCENT ANGLE (degrees and tenths)	ft./NM	GROUND SPEED (knots)											
		60	90	120	150	180	210	240	270	300	330	360

## CLIMB/DESCENT TABLE 10042

## I. POSITION REPORTS

### A. INSTRUMENT FLIGHT RULES (IFR) POSITION REPORT

1. Identification
2. Position
3. Time
4. Altitude/FL (Include actual altitude/FL when operating on a "VFR Conditions on Top" clearance).
5. Type of Flight Plan (not required in IFR position reports made direct to ARTCC).  
State "VFR Conditions on Top" if so cleared.
6. Next reporting point and Estimated Time of Arrival (ETA)
7. Name only of the next succeeding reporting point along the route of flight.
8. Remarks

If entering ADIZ give appropriate ADIZ Position Reports listed under ADIZ Procedures.

### B. VISUAL FLIGHT RULES (VFR) POSITION REPORT

1. Identification
2. Position
3. Time
4. Altitude
5. VFR Flight Plan
6. Destination

If entering ADIZ give appropriate ADIZ Position Reports listed under ADIZ Procedures.

## II. CHANGE OF FLIGHT PLAN

### A. CHANGE OF ROUTE OR DESTINATION

1. Type of Flight Plan
2. Aircraft Identification
3. Type of Aircraft/TD Code
4. Estimated True Airspeed
5. Original Destination (if applicable)
6. Departure Point
7. Position and Time
8. New Route and Altitude/FL
9. New Destination (if applicable)
10. ETE or ETA
11. Fuel Endurance
12. Alternate (if required)
13. Station where original flight plan filed.

### B. CHANGE OF ETA BY MORE THAN 30 MINUTES

1. Aircraft Identification
2. Position and Time
3. "IFR (or VFR) to (destination)"
4. "New ETA – and hours of fuel remaining"

## III. FILING FLIGHT PLANS

1. Aircraft Identification
2. Flight Rules
3. Type of Flight
4. Number of Aircraft
5. Type of Aircraft
6. Wake Turbulence Category
7. Aircraft Surveillance Code
8. Departure Aerodrome
9. Proposed Departure Time
10. Estimated True Airspeed(ETE)
11. Cruising Altitude/FL
12. Route of Flight
13. Destination Aerodrome
14. Estimated Time Enroute (ETE)
15. First Alternate
16. Second Alternate
17. Other Information
18. Fuel Endurance
19. Persons onboard
20. Emergency Equipment
21. Color of Aircraft
22. Pilot's Name/Contact Information

NOTE: Request available NOTAM and weather information for new route and destination.
