World Aeronautical Charts (WACs)

- ✈ Covers large areas, suitable for long range/cross country navigation by aircraft operating under visual flight rules at high altitudes.
- ✈ The topographical information includes: populated places, principal roads, railroads, distinctive landmarks, drainage patterns and relief.
- ✈ The aeronautical information includes radio aids to navigation, airports, airways, special use airspace areas, obstructions, Class C and B Airspaces, and other pertinent data.
- ✈ These charts do not show as much detailed information as appears on the Sectional Aeronautical and VFR Terminal Area Charts.
- ✈ Because of the scale and level of detail, these charts are not recommended for exclusive use by pilots of low speed, low altitude aircraft.
- ✈ Scale: 1:1,000,000
- ✈ Updated: Annually (except for a select few in Alaska, Mexico and the Caribbean, which are revised biennially)
- ✈ Available in digital format
