AIRPORT DIAGRAM/AIRPORT SKETCH

Runways
- Hard Surface
- Other Than Hard Surface
- Stopways, Taxiways, Parking Areas
- Metal Surface

Closed Runway
- Unidirectional
- Bi-directional
- Jet Barrier

ARRESTING GEAR: Specific arresting gear systems; e.g., BAK12, MA-1A etc., shown on airport diagrams, not applicable to Civil Pilots. Military Pilots refer to appropriate DOD publications.

ARRESTING SYSTEM: (EMAS)

REFERENCE FEATURES
- Displaced Threshold
- Hot Spot
- Runway Holding Position Markings
- Buildings
- 24-Hour Self-Serve Fuel
- Tanks
- Obstructions
- Airport Beacon
- Runway Radar Reflectors
- Bridges
- Control Tower

NOTE:
- When Control Tower and Rotating Beacon are co-located, Beacon symbol will be used and further identified as TWR.

# A fuel symbol is shown to indicate 24-hour self-serve fuel available, see appropriate Chart Supplement for information.

NOTE:
- All new and revised airport diagrams are shown referenced to the World Geodetic System (WGS; noted on appropriate diagram), and may not be compatible with local coordinates published in FLIP. (Foreign Only)
- Runway Weight Bearing Capacity or Pavement Classification Number (PCN)/Pavement Classification Rating (PCR) is shown as a codified expression. Refer to the appropriate Supplement/Directory for applicable codes e.g., RWY 14-32 PCR 560 R/B/W/T; S-75, D-185, 25-175, 2D-325

Helicopter Alighting Areas

Negative Symbols used to identify Copter Procedures landing point.

NOTE:
- Landmark features depicted on Copter Approach insets and sketches are provided for visual reference only.

Runway TDZ elevation......TDZE 123

Runway Slope......0.8% UP

(shown when rounded runway slope is greater than or equal to 0.3%)

NOTE:
- Runway Slope measured to midpoint on runways 8000 feet or longer.

U.S. Navy Optical Landing System (OLS) “OLS” location is shown because of its height of approximately 7 feet and proximity to edge of runway may create an obstruction for some types of aircraft.

Approach light symbols are shown in the Flight Information Handbook.

Airport diagram scales are variable.

True/magnetic North orientation may vary from diagram to diagram.

Coordinate values are shown in 1 or ½ minute increments. They are further broken down into 6 second ticks, within each 1 minute increments.

Positional accuracy within ±600 feet unless otherwise noted on the chart.

Runway length depicted is the physical length of the runway (end-to-end, including displaced thresholds if any) but excluding areas designated as stopways.

A symbol is shown to indicate runway declared distance information available, see appropriate Chart Supplement for distance information.

LEGEND

Airport diagrams are specifically designed to assist in the movement of ground traffic at locations with complex runway/taxiway configurations. Airport diagrams are not intended to be used for approach and landing or departure operations. For revisions to Airport Diagrams: Consult FAA Order 7910.4.
